## Test4Cram Salesforce Analytics-DA-201 Exam Questions in PDF Format

Successful companies are those which identify customers' requirements and provide the solution to Analytics-DA-201 exam candidate needs and to make those dreams come true, we are in continuous touch with the exam candidates to get more useful ways. We have favorable quality reputation in the mind of exam candidates these years by trying to provide high quality Analytics-DA-201 Study Guide with the lowest prices while the highest quality. So you can't miss our Analytics-DA-201 learning prep.

Salesforce Certified Tableau Data Analyst Sample Questions (Q163-Q168):

NEW QUESTION # 163
You have the following dashboard.

Sales across cities

City / Category
New York City

When a user selects a only on the map the data on the bar chart must show only the data for the selected city.

The data in the bar chart must change only when the user selects a different city How should you configure the dashboard action? (Use the dropdowns in the Answers Area to select the correct options.)

Answer Area

Dashboard action: Change set values / Filter / Highlight / URL

Running action: Hover / Menu / Select

Clearing the section will: Exclude all values / Keep the filtered values / Show all values

Answer:

Explanation:

Answer Area

Dashboard action: Change set values / Filter / Highlight / URL

Running action: Hover / Menu / Select

Clearing the section will: Exclude all values / Keep the filtered values / Show all values

Explanation:

To configure the dashboard action, you should select Filter as the action type, Select as the run action on option, and All Fields as the target filters option. This will ensure that when a user selects a city on the map, the bar chart will show only the data for the selected city based on all fields in common between the two worksheets. The action will run only when the user selects a different city. References: https://help.tableau.

NEW QUESTION # 164

A Data Analyst has the following view.

Movie Name	Movie Length	Rank of Movie Length
Borat	2.52	
Shrek	2.52	
The Hangover	2.78	3
Die Hard	2.94	4
The Avengers	2.99	5
The Ring	3	6
Toy Story		7
Airplane!	3.24	9
Neverending Story	3.25	9

The analyst wants to filter the view to show only records that have a movie name starting with the word "The". The analyst must achieve the goal without writing any formulas.
Which type of filter should the analyst use?

- A. Wildcard
- B. Condition
- C. Top
- D. General

Answer: A

NEW QUESTION # 165

You have the following dataset.

Month	Sales
January	43,971
February	20,301
March	58,872
April	36,522
May	44,261
June	52,982
July	45,264
August	63,121
September	87,867
October	77,777
November	118,448
December	83,829

Month	Sales
January	$44K
February	$20K
March	$59K
April	$37K
May	$44K
June	$53K
July	$45K
August	$63K
September	$88K
October	$78K
November	$118K
December	$84K

When you use the dataset in a worksheet, you want Sales to appear automatically as shown in the following table.

Month	Sales
January	43,971
February	20,301
March	58,872
April	
May	44,261
June	52,982
July	45,264
August	63,121
September	87,867
October	77,777
November	118,448
December	83,829

What should you do?

- A. Create a calculated field that uses a formula of 'S' * str (Round(([sales],2)) + 'k'
- B. Change the data type of the Sates field to Siring
- C. Create a calculated field that uses a formula of 'S' + stri < (Sales)/1000)).
- D. Change the default number format of the Sales told

Answer: D

Explanation:
To make Sales appear automatically as shown in the second table, you should change the default number format of the Sales field. The default number format is how Tableau displays a field when you drag it to a worksheet. You can change the default number format by right-clicking on the field and selecting Default Properties > Number Format from the menu. This will open a dialog box where you can choose a category, such as Currency or Percentage, and customize the options, such as decimal places or prefixes. In this case, you want to change the default number format of Sales to Currency with zero decimal places and a custom prefix of "S". This will make Sales appear as "S" followed by the rounded value in thousands.
The other options are not correct for this scenario. Changing the data type of Sales to String will not affect how it appears on a worksheet. Creating a calculated field that uses a formula will not change the default number format of Sales, but create a new field that you have to drag to a worksheet. Converting Sales to Attribute will return only one value for each partition of data, which will not show any variation over time.
References: https://help.tableau.com/current/pro/desktop/en-us/formatting.htm https://help.tableau.com/current/pro/desktop/en-us/formatting_change_default.htm
To achieve the formatting as shown in the example, where sales figures are displayed with a "K" to represent thousands and rounded to the nearest thousand (e.g., $20K, $44K, etc.), you would need to adjust the default number format of the Sales field in Tableau. By changing the default number format, every instance where the Sales field is used would automatically reflect this new formatting. This is more efficient than creating a calculated field as it preserves the numeric nature of the field, allowing for further numerical operations and aggregations.

NEW QUESTION # 166
A colleague provides a Data Analyst with access to a folder that contains the following files:
Sales.csv
Book1.twb
Sales.hyper
Export.mdb
Which file is a Tableau extract?

- A. Sales.csv
- B. Export.mdb
- C. Sales.hyper
- D. Book1.twb

Answer: C

NEW QUESTION # 167
You have the following dataset that contain null values in the Profits field.

You want the data to appear as shown in the following table.
Which two formulas achieve the goal? Choose two.

- A. IFNULL [(profits) ,0)
- B. ISNULL ([Profits])
- C. IF [Profits] != null then [Profits] END
- D. ZN ([Profits])

Answer: A,D

Explanation:
Both the ZN and IFNULL functions in Tableau can be used to replace NULL values with zeros. The ZN function converts NULL to zero directly, while the IFNULL function allows you to specify that NULL should be replaced with zero. Both will result in showing zero for any NULL values in the Profits field.
