

Get Best CompTIA Exam CV0-003 Objectives and Reliable Test Notes

CompTIA Cloud+ Certification Exam Objectives

EXAM NUMBER: CV0-003

CompTIA

BONUS!!! Download part of ITPassLeader CV0-003 dumps for free: <https://drive.google.com/open?id=17qQIBvJbEpbagH0C4NUXg9ygkdNznwIk>

If you want to pass the exam in the shortest time, our CV0-003 study materials can help you achieve this dream. Our CV0-003 learning quiz according to your specific circumstances, for you to develop a suitable schedule and learning materials, so that you can prepare in the shortest possible time to pass the exam needs everything. If you use our CV0-003 training prep, you only need to spend twenty to thirty hours to practice our CV0-003 study materials, then you are ready to take the exam and pass it successfully.

The second format, by ITPassLeader, is a web-based CV0-003 practice exam that can be accessed online through browsers like Firefox, Google Chrome, Safari, and Microsoft Edge. You don't need to download or install any excessive plugins or Software to use the web-based software. All operating systems also support this web-based CV0-003 Practice Test.

CV0-003 Reliable Test Notes, Latest CV0-003 Braindumps Questions

Here in this Desktop practice test software, the CompTIA Cloud+ Certification Exam (CV0-003) practice questions given are very relevant to the actual CompTIA CV0-003 exam. It is compatible with Windows computers. ITPassLeader provides its valued customers with customizable CompTIA Cloud+ Certification Exam (CV0-003) practice exam sessions. The CompTIA CV0-003 practice test software also keeps track of the previous CompTIA CV0-003 practice exam attempts.

CompTIA Cloud+ Certification Exam Sample Questions (Q340-Q345):

NEW QUESTION # 340

A systems administrator is provisioning VMs in a cloud environment and has been told to select an OS build with the furthest end-of-life date.

Which of the following OS builds would be BEST for the systems administrator to use?

- A. Open-source
- **B. Stable**
- C. Canary
- D. Beta
- E. LTS

Answer: B

NEW QUESTION # 341

A resource pool in a cloud tenant has 90 GB of memory and 120 cores. The cloud administrator needs to maintain a 30% buffer for resources for optimal performance of the hypervisor. Which of the following would allow for the maximum number of two-core machines with equal memory?

- **A. 45 VMs, 2 GB of memory**
- B. 60 VMs, 1 GB of memory
- C. 30 VMs, 3GB of memory
- D. 40 VMs, 1,5GB of memory

Answer: A

Explanation:

Explanation

To calculate the maximum number of two-core machines with equal memory, we need to consider the resource pool capacity and the buffer requirement. The resource pool has 90 GB of memory and 120 cores, but the cloud administrator needs to maintain a 30% buffer for optimal performance. This means that only 70% of the resources can be used for VM allocation. Therefore, the available memory is $90 \text{ GB} \times 0.7 = 63 \text{ GB}$, and the available cores are $120 \times 0.7 = 84 \text{ cores}$. To allocate two-core machines with equal memory, we need to divide the available memory by the available cores and multiply by two. This gives us the memory size per VM: $(63 \text{ GB} / 84 \text{ cores}) \times 2 = 1.5 \text{ GB}$. However, this is not a valid answer option, so we need to find the closest option that does not exceed the available resources. The best option is C, which allocates 45 VMs with 2 GB of memory each. This uses up $45 \times 2 = 90 \text{ GB}$ of memory and $45 \times 2 = 90 \text{ cores}$, which are within the available limits.

NEW QUESTION # 342

A cloud administrator is managing an organization's infrastructure in a public cloud. All servers are currently located in a single virtual network with a single firewall that all traffic must pass through. Per security requirements, production, QA, and development servers should not be able to communicate directly with each other. Which of the following should an administrator perform to comply with the security requirement?

- A. Create separate network security groups for production, QA, and development servers.
Peer the networks together.
Create static routes for each network to the firewall.
- B. Create separate virtual networks for production, QA, and development servers.
Move the servers to the appropriate virtual network.
Peer the networks together.
- **C. Create separate virtual networks for production, QA, and development servers.
Move the servers to the appropriate virtual network.
Apply a network security group to each virtual network that denies all traffic except for the firewall.**
- D. Create separate network security groups for production, QA, and development servers.
Apply the network security groups on the appropriate production, QA, and development servers.
Peer the networks together.

Answer: C

Explanation:

These are the actions that the administrator should perform to comply with the security requirement of isolating production, QA, and development servers from each other in a public cloud environment:

Create separate virtual networks for production, QA, and development servers: A virtual network is a logical isolation of network resources or systems within a cloud environment. Creating separate virtual networks for different types of servers can help to segregate them from each other and prevent direct communication or interference.

Move the servers to the appropriate virtual network: Moving the servers to the appropriate virtual network can help to assign them to their respective roles and functions, as well as ensure that they follow the network policies and rules of their virtual network.

Apply a network security group to each virtual network that denies all traffic except for the firewall: A network security group is a set of rules or policies that control and filter inbound and outbound network traffic for a virtual network or system. Applying a network security group to each virtual network that denies all traffic except for the firewall can help to enforce security and compliance by blocking any unauthorized or unwanted traffic between different types of servers, while allowing only necessary traffic through the firewall.

NEW QUESTION # 343

A volume-based licensing model is a licensing model that charges the customer based on the amount of data or resources that they consume or use. A volume-based licensing model is suitable for an IaaS (Infrastructure as a Service) environment, as it allows the customer to pay only for what they need and scale up or down as their demand changes. A volume-based licensing model can provide financial benefits for the customer, such as lower upfront costs, greater flexibility, and more predictable billing.

A cloud administrator is evaluating a solution that will limit access to authorized individuals. The solution also needs to ensure the system that connects to the environment meets patching, antivirus, and configuration requirements. Which of the following technologies would BEST meet these requirements?

- A. NAC
- B. HIPS
- C. IDS
- D. EDR

Answer: A

Explanation:

NAC (Network Access Control) is a technology that will limit access to authorized individuals and ensure the system that connects to the environment meets patching, antivirus, and configuration requirements. NAC can enforce policies and rules that define who, what, when, where, and how a device or a user can access a network or a cloud environment. NAC can also inspect and evaluate the security posture and compliance status of a device or a user before granting or denying access. For example, NAC can check if the device has the latest patches, antivirus software, and configuration settings, and if not, it can quarantine, remediate, or reject the device. NAC can also monitor and audit the ongoing network activity and behavior of the devices and users, and take actions if any violations or anomalies are detected.

NEW QUESTION # 344

A cloud administrator is provisioning five VMs, each with a minimum of 8GB of RAM and a varying load throughout the day. The hypervisor has only 32GB of RAM. Which of the following features should the administrator use?

- A. Process scheduling
- B. Memory overcommitment
- C. Hyperthreading
- D. Thin-provisioned model

Answer: A

NEW QUESTION # 345

.....

ITPassLeader's CompTIA CV0-003 exam training materials' simulation is particularly high. You can encounter the same questions in the real exam. This only shows that the ability of our IT elite team is really high. Now many ambitious IT staff to make their own configuration files compatible with the market demand, to realize their ideals through these hot IT exam certification. Achieved excellent results in the CompTIA CV0-003 Exam. With the CompTIA CV0-003 exam training of ITPassLeader, the door of the

CV0-003 Reliable Test Notes: <https://www.itpassleader.com/CompTIA/CV0-003-dumps-pass-exam.html>

They can also tell you the IP addresses of the printers you need to use, CV0-003 People control their lives by making decisions, and so do programs, Please be patient, we will give you a satisfactory answer within 24 hours.

CV0-003 dumps PDF file is downloadable and is able to print out as hardcopy, When you want to perfect your skill, choosing to pass CV0-003 exam sounds nice.
