

# Get Certification on First Attempt with Actual Microsoft PL-400 Questions

2025 Latest VCEdumps PL-400 PDF Dumps and PL-400 Exam Engine Free Share: [https://drive.google.com/open?id=16oJRq8\\_q8o2r\\_XlgEDBR6sDNYeUN8Jyx](https://drive.google.com/open?id=16oJRq8_q8o2r_XlgEDBR6sDNYeUN8Jyx)

Are you often regretful that you have purchased an inappropriate product? Unlike other platforms for selling test materials, in order to make you more aware of your needs, PL-400 test preps provide sample questions for you to download for free. You can use the sample questions to learn some of the topics about PL-400 learn torrent and familiarize yourself with the PL-400 Quiz torrent in advance. If you feel that the PL-400 quiz torrent is satisfying to you, you can choose to purchase our complete question bank. After the payment, you will receive the email sent by the system within 5-10 minutes. Click on the login to start learning immediately with PL-400 test preps. No need to wait.

Microsoft PL-400 Exam consists of 40-60 multiple-choice questions and has a time limit of 180 minutes. PL-400 exam fee is \$165 USD, and candidates can register for the exam through the Microsoft website or a Microsoft testing center. Candidates who pass the exam will earn the Microsoft Certified: Power Platform Developer Associate certification.

## Latest PL-400 Test Answers & Valid Exam PL-400 Preparation

The committed team of the VCEdumps is always striving hard to resolve any confusion among its users. The similarity between our Microsoft Power Platform Developer (PL-400) exam questions and the real Microsoft Power Platform Developer (PL-400) certification exam will amaze you. The similarity between the VCEdumps PL-400 PDF Questions and the actual PL-400 certification exam will help you succeed in obtaining the highly desired Microsoft Power Platform Developer (PL-400) certification on the first go.

## Microsoft Power Platform Developer Sample Questions (Q115-Q120):

### NEW QUESTION # 115

You have a plug-in that performs business logic on contact records. The plug-in is registered in the post-operation stage and is executed when a field named custom\_field3 is updated.

The plug-in contains the following code:

```
var cols = new ColumnSet("lastname", "custom_field1");
var contact = service.Retrieve("contact", ctx.PrimaryEntityId, cols);
var updatedValue = contact.GetAttributeValue<string>("lastname");
updatedValue += contact.GetAttributeValue<string>("custom_field1");
contact["custom_field2"] = updatedValue;
service.Update(contact);
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

| Statements                                                                                                                             | Yes                   | No                    |
|----------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-----------------------|
| You can improve code performance by using the following code instead of retrieving individual fields: <code>new ColumnSet(true)</code> | <input type="radio"/> | <input type="radio"/> |
| You can avoid retrieving the changed entity by using plug-in images.                                                                   | <input type="radio"/> | <input type="radio"/> |
| You can avoid updating the changed entity by registering the plug-in in the pre-operation stage.                                       | <input type="radio"/> | <input type="radio"/> |

**Answer:**

**Explanation:**

| Statements                                                                                                                             | Yes                              | No                               |
|----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|----------------------------------|
| You can improve code performance by using the following code instead of retrieving individual fields: <code>new ColumnSet(true)</code> | <input type="radio"/>            | <input checked="" type="radio"/> |
| You can avoid retrieving the changed entity by using plug-in images.                                                                   | <input checked="" type="radio"/> | <input type="radio"/>            |
| You can avoid updating the changed entity by registering the plug-in in the pre-operation stage.                                       | <input checked="" type="radio"/> | <input type="radio"/>            |

**Explanation**

| Statements                                                                                                                             | Yes                              | No                               |
|----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|----------------------------------|
| You can improve code performance by using the following code instead of retrieving individual fields: <code>new ColumnSet(true)</code> | <input type="radio"/>            | <input checked="" type="radio"/> |
| You can avoid retrieving the changed entity by using plug-in images.                                                                   | <input checked="" type="radio"/> | <input type="radio"/>            |
| You can avoid updating the changed entity by registering the plug-in in the pre-operation stage.                                       | <input checked="" type="radio"/> | <input type="radio"/>            |

### NEW QUESTION # 116

You need to recommend solutions to meet the e-commerce automation requirements.

Which platform tools should you recommend? To answer, drag the appropriate tools to the correct requirements. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

| Tools          | Requirement         | Tool |
|----------------|---------------------|------|
| Power Apps     |                     |      |
| Logic Apps     | Online sales orders |      |
| Power Automate | Customer survey     |      |
| Workflow       |                     |      |

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/community/power-automate-vs-logic-apps>

<https://docs.microsoft.com/en-us/power-automate/replace-workflows-with-flows>

### NEW QUESTION # 117

You are developing a Power Apps app for a company. The app will interact with the company's enterprise resource planning (ERP) system. The app allows users to create quotes for customers. You are creating a plug-in for the app.

The solution must meet the following requirements:

- \* Display an error message if there is no account associated with a quote and prevent changes to the quote.

- \* Synchronize quotes with the external ERP system.

You need configure the plug-in execution pipeline.

Which pipeline stages should you use? To answer, drag the appropriate pipeline stages to the correct requirements. Each pipeline stage may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

| Pipeline stages | Requirement                                                                                               | Pipeline stage |
|-----------------|-----------------------------------------------------------------------------------------------------------|----------------|
| MainOperation   | Display an error message if there is no account associated with a quote and prevent changes to the quote. | PreValidation  |
| PostOperation   | Synchronize quotes with the external ERP system.                                                          | PostOperation  |
| PreOperation    |                                                                                                           |                |
| PreValidation   |                                                                                                           |                |

Answer:

Explanation:

Explanation:

| Pipeline stages | Requirement                                                                                               | Pipeline stage |
|-----------------|-----------------------------------------------------------------------------------------------------------|----------------|
| MainOperation   | Display an error message if there is no account associated with a quote and prevent changes to the quote. | PreValidation  |
| PostOperation   | Synchronize quotes with the external ERP system.                                                          | PostOperation  |
| PreOperation    |                                                                                                           |                |
| PreValidation   |                                                                                                           |                |

### NEW QUESTION # 118

A company is building a new model-driven app.  
The app must integrate with a number of on-premises and cloud solutions. No VPNs are in place.  
You need to determine the method for each integration.  
Which methods should you use? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

| Integration                                                                                    | Method                                                                                                                                             |
|------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Outbound synchronous calls to a third-party Web API service                                    | <div>▼</div> <ul style="list-style-type: none"> <li>Webhook</li> <li>Microsoft Flow</li> <li>Azure Event Hub</li> <li>Azure Service Bus</li> </ul> |
| Calls to and from a website hosted in Azure with high peak loads                               | <div>▼</div> <ul style="list-style-type: none"> <li>Plug-in</li> <li>Webhook</li> <li>Azure Event Hub</li> <li>Azure Service Bus</li> </ul>        |
| Outbound calls to multiple on-premises and cloud systems to notify of customer address changes | <div>▼</div> <ul style="list-style-type: none"> <li>Plug-in</li> <li>Azure Event Hub</li> <li>Webhook</li> </ul>                                   |

**Answer:**

Explanation:

| Integration                                                                                    | Method                                                                                                                                             |
|------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Outbound synchronous calls to a third-party Web API service                                    | <div>▼</div> <ul style="list-style-type: none"> <li>Webhook</li> <li>Microsoft Flow</li> <li>Azure Event Hub</li> <li>Azure Service Bus</li> </ul> |
| Calls to and from a website hosted in Azure with high peak loads                               | <div>▼</div> <ul style="list-style-type: none"> <li>Plug-in</li> <li>Webhook</li> <li>Azure Event Hub</li> <li>Azure Service Bus</li> </ul>        |

#### NEW QUESTION # 119

You need to resolve the issue with the new command button. What should you do?

- A. Pass the value SelectedControl to the function in the action definition.

- B. Select the Pass execution context as first parameter option on the event registration form.
- C. Pass the value PrimaryControl to the function in the action definition.
- D. Pass ExecutionContext To The function in the action definition.

**Answer: B**

Explanation:

Topic 5, Northwind Traders

Case study

Background

Northwind Traders uses Microsoft Dynamics 365 Sales to manage its sales process. To better understand its customers, Northwind Traders invests in a team of researchers who gather data from multiple sources. The company stores the data it collects in a Microsoft Azure SQL Database. The company plans to use the data to enrich account records and make the sales team more effective.

Environment

- \* The company has three Microsoft Power Platform environments with Dynamics 365 Sales installed. The environments are named development, test, and production.
- \* Each environment has an application user that can be used for integrations.
- \* The company must use solutions to perform all customization and configuration deployment.

Data

- \* Researchers are responsible for creating account records.
- \* Researchers have permissions on the Account table to create records, read all records, and update records they own.
- \* A synchronous plug-in runs when an account record is created and could reassign the record to a different user.
- \* Users must access data as themselves to enforce security and audit changes.
- \* A column named new\_dataid is added to the Account table. The column uniquely identifies which data it should receive.
- \* Researchers have researched only the top 20 percent of account records.

Web API

- \* The company creates an Azure Function to run a RESTful .NET Web API.
- o Data can be retrieved by placing a GET request to the URL <https://dataservice-tENVIRONMENTNAME.azurewebsites.net/enrich/IDATAID>.  
[ENVIRONMENTNAME] is the name of the Microsoft Power Platform environment that requests the data.  
[DATAID] is the new\_dataid column in the Account table.
- o The Web API response will return a 200 response plus data if the Dataid is found. Otherwise, a 404 response is returned.
- \* Developers plan to create a custom connector from the Web API to make it accessible from Microsoft Power Platform.

Custom connector

- \* The Web API definition used to create The custom connector must be generated based on a low-code technology.
- \* The URL used by the custom connector must incorporate the current environment name without hardcoding values.
- \* Errors generated by the custom connector must not cause downstream processes to fail.
- \* Text descriptions and field placeholder text that describe the use of the custom connector must appear for non-developers.

Process

- \* All account records must be updated with data from the Web API once automatically.
- \* Only account records that contain a Dataid should be updated by the Web API.
- \* Researchers must create Power Automate flows to specify data analysis priority.
- \* The researchers require a process that repurposes a set of identical steps of parameterized Microsoft Dataverse queries from a Power Automate flow for use in other flows that have different parameters. The researchers want to avoid recreating the steps manually each time they create a flow to save time and avoid errors.

Issues

- \* A tester attempts to connect to the production instance of the Web API with a Dataid that should return data. The tester receives an error stating that the remote name could not be resolved.
- \* A missing component causes an error to occur when importing the solution that contains the Power Automate flow to update account records in a test environment.

## NEW QUESTION # 120

.....

Only by our PL-400 practice guide you can get maximum reward not only the biggest change of passing the exam efficiently, but mastering useful knowledge of computer exam. So our practice materials are regarded as the great help. Rather than promoting our PL-400 Actual Exam aggressively to exam candidates, we have been dedicated to finishing their perfection and shedding light on frequent-tested PL-400 exam questions.
