Prepare Your CompTIA DA0-001 Exam with Real CompTIA DA0-001 Valid Test Testking Easily

In the process of using the DA0-001 study materials, once users have any questions about our study materials, the user can directly by E-mail us, our products have a dedicated customer service staff to answer for the user, they are 24 hours service for you, we are very welcome to contact us by E-mail and put forward valuable opinion for us. Our DA0-001 Study Materials already have many

different kinds of learning materials, users may be confused about the choice, what is the most suitable DA0-001 study materials? Believe that users will get the most satisfactory answer after consultation.

CompTIA Data+ Certification Exam Sample Questions (Q203-Q208):

NEW QUESTION # 203

Which of the following roles is responsible for ensuring an organization's data quality, security, privacy, and regulatory compliance?

- A. Data custodian.
- **B. Data steward.**
- C. Data processor.
- D. Data owner.

Answer: B

Explanation:

Explanation

Correct answer B. Data steward.

A data steward is responsible for leading an organization's data governance activities, which include data quality, security, privacy, and regulatory compliance.

NEW QUESTION # 204

An analyst in a consumer bank department wants to showcase the concentration of accounts opened in the United States by ZIP Code to describe the effectiveness of the bank's marketing campaigns. Which of the following would be the best way to visualize the data?

- A. A stacked chart
- B. A tree map
- **C. A geographic map**
- D. A waterfall chart

Answer: C

NEW QUESTION # 205

How many variables may be shown in a simple pie chart?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

NEW QUESTION # 206

Refer to the exhibit.

Given the following data tables:

CustomerID	CustomerLastName
01	Manzelli
02	Kraus

SalesRepID	Customer Last Name	Items
01	Poputhopolis	Wagon, Red Paint
02	Smith	Bicycle, Wheels, Handlebars

ItemID	Customer_Last_Name	QuantityPurchased
01	Brown	03
02	Smee	07

Which of the following MDM processes needs to take place FIRST?

- A. Compliance with regulations
- **B. Creation of a data dictionary**
- C. Consolidation of multiple data fields
- D. Standardization of data field names

Answer: B

Explanation:

This is because a data dictionary is a type of document that defines and describes the data elements, attributes, and relationships in a database or a data set. A data dictionary can be used to facilitate the MDM (Master Data Management) process, which is a process that aims to ensure the quality, consistency, and accuracy of the data across different sources and systems. By creating a data dictionary first, the analyst can establish a common understanding and standardization of the data field names, types, formats, and meanings, as well as identify any potential issues or conflicts in the data, such as missing values, duplicate values, or inconsistent values. The other MDM processes can take place after creating a data dictionary. Here is why:

Compliance with regulations is a type of MDM process that ensures that the data meets the legal and ethical requirements and standards of the industry or the organization. Compliance with regulations can take place after creating a data dictionary, because the data dictionary can help the analyst to identify and apply the relevant rules and policies to the data, such as data privacy, security, or retention.

Standardization of data field names is a type of MDM process that ensures that the data field names are consistent and uniform across different sources and systems. Standardization of data field names can take place after creating a data dictionary, because the data dictionary can provide a reference and a guideline for naming and labeling the data fields, as well as resolving any discrepancies or ambiguities in the data field names.

Consolidation of multiple data fields is a type of MDM process that combines or merges the data fields from different sources or systems into a single source or system. Consolidation of multiple data fields can take place after creating a data dictionary because the data dictionary can help the analyst to map and match the data fields from different sources or systems based on their definitions and descriptions, as well as eliminating any redundant or duplicate data fields.

NEW QUESTION # 207

Given the table below:

Transaction ID	Date	Year	Amount
XFW25091	10/1/2019	2019	\$100.00
8741STKJG	5/3/2019	2019	\$50.00
TIO335AL	8/15/2018	2018	\$50.00
53KJNM1C	1/4/2020	2020	\$250.00

Which of the following variable types BEST describes the "Year" column?

- A. Numeric
- B. Text
- **C. Date**
- D. Alphanumeric

Answer: C

Explanation:

Explanation

This is because date is a type of variable that represents a specific point or period in time, such as a day, a month, or a year. Date variables can be used to store, manipulate, or analyze temporal data, such as transaction dates, birth dates, or expiration dates. For example, date variables can be used to calculate the duration or the difference between two dates, or to filter or sort the data by date. The other variable types are not correct descriptions of the "Year" column. Here is why:

Numeric is a type of variable that represents a numerical value, such as an integer, a decimal, or a fraction. Numeric variables can be used to store, manipulate, or analyze quantitative data, such as amounts, prices, or scores. For example, numeric variables can be used to perform arithmetic operations or calculations on the data, or to measure the central tendency or the dispersion of the data.

Alphanumeric is a type of variable that represents a combination of alphabetic and numeric characters, such as letters, numbers, symbols, or spaces. Alphanumeric variables can be used to store, manipulate, or analyze textual data, such as names, addresses, or codes. For example, alphanumeric variables can be used to concatenate or split the data, or to search or match the data using patterns or expressions.

Text is a type of variable that represents a sequence of alphabetic characters, such as letters or words.

Text variables can be used to store, manipulate, or analyze textual data, such as names, categories, or labels. For example, text variables can be used to change the case or the length of the data, or to compare or classify the data using criteria or rules.

NEW QUESTION # 208

.....

Everyone wants to stand out in such a competitive environment, but they don't know how to act. Maybe our DA0-001 exam questions can help you. Having a certificate may be something you have always dreamed of, because it can prove that you have a certain capacity. Our DA0-001 learning materials can provide you with meticulous help and help you get your certificate. Our DA0-001 training prep is credible and their quality can stand the test. Therefore, our DA0-001 practice materials can help you get a great financial return in the future and you will have a good quality of life.
