Free update for 365 days is available if you buy DOP-C01 exam braindumps from us. That is to say, in the following year, you can get the latest information about the DOP-C01 exam dumps timely. And the update version will be sent to your email automatically. In addition, the DOP-C01 Exam Braindumps are compiled by experienced experts who are quite familiar with the dynamics about the exam center, therefore the quality and accuracy of the DOP-C01 exam braindumps can be guaranteed.

The AWS Certified DevOps Engineer Professional (DOP-C01) exam is a highly sought-after certification for experienced DevOps professionals looking to validate their knowledge and skills in deploying, managing, and operating highly available, fault-tolerant, and scalable systems on the AWS platform. AWS Certified DevOps Engineer - Professional certification is designed to test candidates' proficiency in deploying and managing continuous delivery systems and methodologies on AWS, as well as their ability to implement and manage automation technologies and tools that enable secure and reliable infrastructure deployments.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q44-Q49):

NEW QUESTION # 44

The resources for a business-critical, three-tier web application are expressed in a series of AWS CloudFormation templates. The application is using Amazon RDS for data and Amazon ElastiCache for session state. Users have reported degraded performance in the application.

A DevOps Engineer notices that the T2 instance type is being used for the application tier and CPU usage is at 100% in Amazon CloudWatch.

What process should the Engineer follow to restore operations with the LEAST amount of distribution to the end users?

- A. Launch a new CloudFormation stack for the application tier using the M4 instance type, run acceptance tests against the new stack, and update the Amazon Route 53 A record
- B. Launch a new CloudFormation stack for all tiers of the application in a different region, run acceptance tests against the new stack, and update the Amazon Route 53 A record
- C. Update the CloudFormation stack for the application tier using the T2 Unlimited option, run acceptance tests against the new stack, and update the Amazon Route 53 A record
- D. Write a new CloudFormation template to include Amazon CloudFront in the environment, launch the stack, and update the Amazon Route 53 A record

Answer: C

NEW QUESTION # 45

Which is the proper syntax for referencing a variable's value in an Ansible task?

- A. { variable_name }
- B. "{{ variable_name }}"
- C. @variable_name
- D. \${variable_name}

Answer: B

Explanation:

We use the variable's name to reference the variable which we encapsulate in curly brackets

'{{ }}'; however, the YAML syntax dictates that a string beginning with a curly bracket denotes a dictionary value. To get around this it's proper to wrap the variable declaration in quotes.

Reference: http://docs.ansible.com/ansible/playbooks_variables.html#hey-wait-a-yaml-gotcha

NEW QUESTION # 46

Which of the following is not a component of Elastic Beanstalk?

- A. ApplicationVersion
- B. Docker
- C. Environment
- D. Application

Answer: B

Explanation:

Explanation

Answer - C

The following are the components of Elastic Beanstalk

- 1) Application - An Elastic Beanstalk application is a logical collection of Elastic Beanstalk components, including environments, versions, and environment configurations. In Elastic Beanstalk an application is conceptually similar to a folder
- 2) Application version - In Elastic Beanstalk, an application version refers to a specific, labeled iteration of deployable code for a web application
- 3) environment - An environment is a version that is deployed onto AWS resources. Each environment runs only a single application version at a time, however you can run the same version or different versions in many environments at the same time.
- 4) environment Configuration - An environment configuration identifies a collection of parameters and settings that define how an environment and its associated resources behave.
- 5) Configuration Template - A configuration template is a starting point for creating unique environment configurations. For more information on the components of Elastic beanstalk please refer to the below link
<http://docs.aws.amazon.com/elasticbeanstalk/latest/dg/concepts.components.html>

NEW QUESTION # 47

A company's legacy application uses IAM user credentials to access resources in the company's AWS Organizations organization. A DevOps engineer needs to ensure new IAM users cannot be created unless the employee creating the IAM user is on an exception list.

Which solution will meet these requirements?

- A. Attach an Organizations SCP with an explicit deny for all `iamCreateAccessKey` actions with a condition that excludes `StringNotEquals` for `aws:username` with a value of the exception list.
- B. Create an Amazon EventBridge (Amazon CloudWatch Events) rule with a pattern that matches the `iamCreateUser` action with an AWS Lambda function target. The function will check the user name and account against an exception list. If the user is not in the exception list, the function will delete the user.
- C. Create an Amazon EventBridge (Amazon CloudWatch Events) rule with a pattern that matches the `iamCreateAccessKey` action with an AWS Lambda function target. The function will check the user name account against an exception list. If the user is not in the exception list, the function will delete the user.
- D. Attach an Organizations SCP with an explicit deny for all `iamCreateUser` actions with a condition that includes `StringEquals` for `aws:username` with a value of the exception list.

Answer: A

NEW QUESTION # 48

An AWS CodePipeline pipeline has implemented a code release process. The pipeline is integrated with AWS CodeDeploy to deploy versions of an application to multiple Amazon EC2 instances for each CodePipeline stage. During a recent deployment, the pipeline failed due to a CodeDeploy issue. The DevOps team wants to improve monitoring and notifications during deployment to decrease resolution times. What should the DevOps Engineer do to create notifications when issues are discovered?

- A. Implement AWS CloudWatch Events for CodePipeline and CodeDeploy, create an Amazon Inspector assessment target to evaluate code deployment issues, and create an Amazon SNS topic to notify stakeholders of deployment issues.
- B. Implement AWS CloudTrail to record CodePipeline and CodeDeploy API call information, create an AWS Lambda function to evaluate code deployment issues, and create an Amazon SNS topic to notify stakeholders of deployment issues.
- C. Implement AWS CloudWatch Logs for CodePipeline and CodeDeploy, create an AWS Config rule to evaluate code deployment issues, and create an Amazon SNS topic to notify stakeholders of deployment issues.
- D. Implement AWS CloudWatch Events for CodePipeline and CodeDeploy, create an AWS Lambda function to evaluate code deployment issues, and create an Amazon SNS topic to notify stakeholders of deployment issues.

Answer: C
