

Get Help from Real and Experts Verified ExamTorrent CertNexus AIP-210 Exam Dumps

BONUS!!! Download part of ExamTorrent AIP-210 dumps for free: <https://drive.google.com/open?id=18CpamH1Pu03xWyVWR7qMWm-zlikfpaKj>

ExamTorrent CertNexus AIP-210 Exam Questions are made in accordance with the latest syllabus and the actual CertNexus AIP-210 certification exam. We constantly upgrade our training materials, all the products you get with one year of free updates. You can always extend the to update subscription time, so that you will get more time to fully prepare for the exam. If you still confused to use the training materials of ExamTorrent, then you can download part of the examination questions and answers in ExamTorrent website. It is free to try, and if it is suitable for you, then go to buy it, to ensure that you will never regret.

CertNexus AIP-210 Exam Syllabus Topics:

Topic	Details
Topic 1	• Transform numerical and categorical data • Address business risks, ethical concerns, and related concepts in operationalizing the model
Topic 2	• Identify potential ethical concerns • Analyze machine learning system use cases
Topic 3	• Train, validate, and test data subsets • Training and Tuning ML Systems and Models
Topic 4	• Recognize relative impact of data quality and size to algorithms • Engineering Features for Machine Learning

Quiz Latest AIP-210 - CertNexus Certified Artificial Intelligence Practitioner (CAIP) New Study Questions

With three versions of products, our AIP-210 learning questions can satisfy different taste and preference of customers with different use: PDF & Software & APP versions. Without ambiguous points of questions make you confused, our AIP-210 practice materials can convey the essence of the content suitable for your exam. With our AIP-210 exam guide, you will achieve what you are expecting with ease.

CertNexus Certified Artificial Intelligence Practitioner (CAIP) Sample Questions (Q51-Q56):

NEW QUESTION # 51

A classifier has been implemented to predict whether or not someone has a specific type of disease.

Considering that only 1% of the population in the dataset has this disease, which measures will work the BEST to evaluate this model?

- A. Precision and accuracy
- B. Mean squared error
- C. Recall and explained variance
- **D. Precision and recall**

Answer: D

Explanation:

Explanation

Precision and recall are two measures that can evaluate the performance of a classifier, especially when the data is imbalanced.

Precision is the ratio of true positives (correctly predicted positive cases) to all predicted positive cases. Recall is the ratio of true positives to all actual positive cases. Precision and recall can help assess how well the classifier can identify the positive cases (the disease) and avoid false negatives (missed diagnosis) or false positives (unnecessary treatment).

NEW QUESTION # 52

Which of the following is a privacy-focused law that an AI practitioner should adhere to while designing and adapting an AI system that utilizes personal data?

- **A. General Data Protection Regulation (GDPR)**
- B. ISO/IEC 27001
- C. PCIDSS
- D. Sarbanes Oxley (SOX)

Answer: A

Explanation:

The General Data Protection Regulation (GDPR) is a privacy-focused law that an AI practitioner should adhere to while designing and adapting an AI system that utilizes personal data. The GDPR applies to any organization that processes personal data of individuals in the European Union (EU), regardless of where the organization is located. The GDPR grants individuals rights over their personal data, such as the right to access, rectify, erase, restrict, or object to its processing. The GDPR also imposes obligations on organizations that process personal data, such as the duty to obtain consent, conduct data protection impact assessments, implement data protection by design and by default, and ensure accountability and transparency. The GDPR also addresses some specific issues related to AI, such as automated decision-making, profiling, and data portability.

NEW QUESTION # 53

When working with textual data and trying to classify text into different languages, which approach to representing features makes the most sense?

- A. Word2Vec algorithm
- **B. Bag of bigrams (2 letter pairs)**
- C. Clustering similar words and representing words by group membership
- D. Bag of words model with TF-IDF

Answer: B

Explanation:

A bag of bigrams (2 letter pairs) is an approach to representing features for textual data that involves counting the frequency of each pair of adjacent letters in a text. For example, the word "hello" would be represented as {"he": 1, "el": 1, "ll": 1, "lo": 1}. A bag of bigrams can capture some information about the spelling and structure of words, which can be useful for identifying the language of a text. For example, some languages have more common bigrams than others, such as "th" in English or "ch" in German.

NEW QUESTION # 54

R-squared is a statistical measure that:

- A. Expresses the extent to which two variables are linearly related.
- B. Represents the extent to which two random variables vary together.
- C. Combines precision and recall of a classifier into a single metric by taking their harmonic mean.
- **D. Is the proportion of the variance for a dependent variable that's explained by independent variables.**

Answer: D

Explanation:

Explanation

R-squared is a statistical measure that indicates how well a regression model fits the data. R-squared is calculated by dividing the explained variance by the total variance. The explained variance is the amount of variation in the dependent variable that can be attributed to the independent variables. The total variance is the amount of variation in the dependent variable that can be observed in the data. R-squared ranges from 0 to 1, where 0 means no fit and 1 means perfect fit.

NEW QUESTION # 55

A change in the relationship between the target variable and input features is

- A. data drift.
- **B. concept drift.**
- C. model decay.
- D. covariate shift.

Answer: B

Explanation:

Explanation

Concept drift, also known as model drift, occurs when the task that the model was designed to perform changes over time. For example, imagine that a machine learning model was trained to detect spam emails based on the content of the email. If the types of spam emails that people receive change significantly, the model may no longer be able to accurately detect spam. References: Understanding Data Drift and Model Drift: Drift Detection in Python | DataCamp, Machine Learning Monitoring, Part 5: Why You Should Care About Data and Concept Drift

NEW QUESTION # 56

.....

Our three kinds of AIP-210 real exam includes the new information that you need to know to pass the test. PDF version is full of legible content to read and remember, support customers' printing request, Software version of AIP-210 practice materials supports simulation test system, and several times of setup with no restriction. App online version of AIP-210 Learning Engine is suitable to all kinds of digital devices and offline exercise. You will find your favorite one if you have a try!
