## SAP E\_S4CPE\_2405 Valid Test Braindumps & New E\_S4CPE\_2405 Test Questions

The companies do not want to lose them and they offer a good package to convince the candidate to become a part of their organization. So, to fit in the game, you must go for the LatestCram SAP E\_S4CPE\_2405 Practice Exam that will show you where you stand and how hard you need to work to get the SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition (E\_S4CPE\_2405) certification exam.

## SAP E\_S4CPE\_2405 Exam Syllabus Topics:

---

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>System Landscapes and Identity Access Management: This section of the exam measures skills of system administrators and focuses on designing and managing SAP system landscapes while ensuring secure and efficient identity access management. It includes concepts related to system environments, user authentication, and authorization controls.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of application consultants and covers configuring SAP solutions to meet business needs, along with setting up and managing the SAP Fiori Launchpad. It also touches on customizing the user interface for an optimal and user-friendly experience.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Data Migration and Business Process Testing: This section of the exam measures skills of SAP implementation consultants and covers the core principles of migrating data into SAP systems while ensuring that business processes run as intended. It involves understanding the methods for transferring data, verifying its accuracy, and executing process testing to confirm that the system meets operational requirements.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Extensibility, Integration, and Clean Core: This section of the exam measures skills of integration specialists and involves understanding the principles of extending SAP functionality without compromising the clean core approach. It includes integrating SAP with other systems, maintaining system integrity, and ensuring sustainable customizations.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of project managers and emphasizes the importance of adopting a cloud-first approach when implementing SAP solutions. It also includes building the right implementation team and running fit-to-standard workshops to align system configuration with best practices and standard business processes.</li> </ul>

## SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q29-Q34):

### NEW QUESTION # 29

Which of the following analyses can you create from the Manage KPIs and Reports app? Note: There are 3 correct answers to this question.

- A. Lumira Dashboards
- B. Multidimensional Reports
- C. Object Views
- D. SAC Stories
- E. Review Booklets

**Answer: B,C,D**

Explanation:

The "Manage KPIs and Reports" app in SAP S/4HANA Cloud Private Edition is a Fiori-based tool for creating and managing analytical content. Let's analyze the options:

\* A. Object Views: This is correct. Object Views are analytical views created within the app to display data for specific business objects (e.g., sales orders), leveraging CDS views for reporting purposes.

\* B. Review Booklets: This is incorrect. Review Booklets are not a feature of the Manage KPIs and Reports app; they are typically associated with SAP Analytics solutions or external tools, not standard S/4HANA reporting.

\* C. Lumira Dashboards: This is incorrect. SAP Lumira is a separate visualization tool, not directly supported within the Manage KPIs and Reports app, which focuses on embedded analytics in S/4HANA.

\* D. Multidimensional Reports: This is correct. The app allows creation of multidimensional reports based on CDS views, enabling users to analyze data across multiple dimensions (e.g., time, region) in a flexible grid format.

\* E. SAC Stories: This is correct. The app integrates with SAP Analytics Cloud (SAC), allowing users to create SAC Stories

(interactive dashboards) directly from S/4HANA data, enhancing analytical capabilities.

In summary, analyses that can be created from the Manage KPIs and Reports app are A(Object Views), D(Multidimensional Reports), and E(SAC Stories).

### NEW QUESTION # 30

Where do you identify new and changed features in the latest release of SAP S/4HANA? Note: There are 2 correct answers to this question.

- A. Feature scope description
- B. Customer Influence portal
- C. What's New Viewer
- D. SAP Road Map Explorer

**Answer: C,D**

Explanation:

Identifying new and changed features in the latest SAP S/4HANA release (e.g., 2024 for Private Edition) requires specific SAP tools or resources. Let's analyze:

\* A. Feature scope description: This is incorrect. The feature scope description outlines the overall capabilities of a solution (e.g., Private Edition), but it's not a dynamic tool for highlighting new or changed features in a specific release-it's more static documentation.

\* B. What's New Viewer: This is correct. The What's New Viewer (available via SAP Help Portal or SAP for Me) provides detailed release notes for each SAP S/4HANA version, listing new features, enhancements, and changes (e.g., new Fiori apps, process improvements) specific to the latest release.

\* C. SAP Road Map Explorer: This is also correct. SAP Road Map Explorer ([roadmaps.sap.com](https://roadmaps.sap.com)) offers a strategic view of SAP S/4HANA's evolution, including new and planned features across releases. It highlights innovations and updates, making it a key resource for tracking changes.

\* D. Customer Influence portal: This is incorrect. The Customer Influence portal allows customers to submit and vote on improvement requests, but it's not a primary source for identifying new or changed features in a release-it's for feedback, not documentation.

In summary, new and changed features are identified in B(What's New Viewer) and C(SAP RoadMap Explorer).

### NEW QUESTION # 31

What are some prerequisites if you want to transfer data with the Migrate Your Data - Migration Cockpit app using a separate SAP HANA database in SAP S/4HANA Cloud Private Edition?

Note: There are 2 correct answers to this question.

- A. You have to create the migration projects.
- B. You have to create the migration objects.
- C. You have to activate a certain business process.
- D. You have to set up the integration.

**Answer: A,D**

Explanation:

When transferring data using the "Migrate Your Data - Migration Cockpit" app with a separate SAP HANA database in SAP S/4HANA Cloud Private Edition, the following prerequisites must be met:

Option A: You have to set up the integration.

This option is correct. Establishing a connection between the source system and the target SAP S/4HANA Cloud system is essential for data migration.

Option B: You have to create the migration projects.

This option is correct. Defining migration projects within the Migration Cockpit organizes and manages the data migration process effectively.

Option C: You have to activate a certain business process.

This option is incorrect. Activating specific business processes is not a prerequisite for data migration using the Migration Cockpit.

Option D: You have to create the migration objects.

This option is incorrect. SAP provides standard migration objects, and while customization is possible, creating new migration objects is not a prerequisite.

In summary, setting up the integration and creating migration projects are essential prerequisites for using the Migration Cockpit app with a separate SAP HANA database in SAP S/4HANA Cloud Private Edition.

The "Migrate Your Data - Migration Cockpit" app in SAP S/4HANA Cloud Private Edition is used to transfer data during a new implementation or selective data transition. When using a separate SAP HANA database (e.

g., an external staging database) instead of file-based migration, certain prerequisites must be met. Let's evaluate the options:

\* A. You have to set up the integration: This is correct. When using a separate SAP HANA database as a staging area, you must establish integration between the source database and the SAP S/4HANA Cloud Private Edition system. This involves configuring connectivity (e.g., via SAP HANA smart data integration or direct database links) to allow the Migration Cockpit to access and pull data from the external HANA database. SAP documentation highlights this as a prerequisite for the staging approach.

\* B. You have to create the migration projects: This is also correct. In the Migration Cockpit, a migration project must be created to define the scope, target system, and data migration approach (e.g., staging tables). This is a fundamental step regardless of whether files or a separate HANA database is used, but it's especially critical when mapping data from an external database, as the project specifies the objects and data sources.

\* C. You have to activate a certain business process: This is incorrect. The Migration Cockpit is a data migration tool, not tied to activating specific business processes in the system. While business processes may dictate what data is migrated, their activation is not a prerequisite for using the tool with a separate HANA database.

\* D. You have to create the migration objects: This is incorrect. The Migration Cockpit provides pre-delivered migration objects (e.g., for customers, materials, financial data) that users select within a migration project. While users can extend or customize these objects, creating them from scratch is not a prerequisite-SAP delivers them as standard content.

In summary, the prerequisites for transferring data with the Migration Cockpit using a separate SAP HANA database are A (You have to set up the integration) and B (You have to create the migration projects).

\* SAP Official Site: "SAP S/4HANA Cloud Private Edition - Data Migration" ([www.sap.com](https://www.sap.com))

## NEW QUESTION # 32

How should an implementation consultant customize SAP Best Practices business processes?

- A. Use SAP Cloud ALM to edit the process
- B. Make edits to the original process
- C. Use SAP Signavio Process Manager to edit the process
- **D. Make a copy of the original process and edit the copy**

**Answer: D**

## NEW QUESTION # 33

You are assessing an SAP Fiori app within a standard business process.

Which questions need to be addressed before you finalize the business process for the customer? Note: There are 2 correct answers to this question.

- A. Does the app require simplification?
- **B. Does the app need any enhancement?**
- **C. Is in-app extensibility sufficient?**
- D. Does a classic SAP GUI transaction exist?

**Answer: B,C**

Explanation:

When assessing an SAP Fiori app within a standard business process, it's essential to address the following questions before finalizing the business process for the customer:

Option A: Is in-app extensibility sufficient?

Option B: Does the app need any enhancement?

Option C: Does the app require simplification?

Option D: Does a classic SAP GUI transaction exist?

In summary, before finalizing the business process for the customer, it's crucial to assess whether in-app extensibility is sufficient and if the app requires any enhancements. These considerations ensure that the SAP Fiori app aligns with the customer's specific business requirements and can be effectively integrated into their processes.
