

# Get High Pass-Rate SCA-C01 Exam Question and Pass Exam in First Attempt

What's more, part of that Itexamguide SCA-C01 dumps now are free: <https://drive.google.com/open?id=1XCHmuvAaAEdm0b3b3eUeOCR468AbbAM>

Tableau SCA-C01 study material of "Itexamguide" is available in three different formats: PDF, desktop-based practice test software, and a browser-based practice SCA-C01 exam questions. Tableau Server Certified Associate Exam (SCA-C01) practice tests are a great way to gauge your progress and identify weak areas for further study. Check out features of these formats.

Tableau SCA-C01 exam consists of 60 multiple-choice questions that need to be completed within 120 minutes. SCA-C01 exam covers various topics, including Tableau Server architecture, security, deployment, configuration, and maintenance. SCA-C01 exam questions are designed to assess the candidate's ability to install and configure Tableau Server, manage users, groups, and permissions, create and publish content, troubleshoot issues, and optimize server performance.

Becoming a Tableau Server Certified Associate can provide numerous benefits to individuals and organizations. Certified individuals are recognized as experts in Tableau Server administration, which can lead to increased job opportunities and higher salaries. In addition, organizations can benefit from having certified Tableau Server administrators who can effectively manage and optimize their Tableau Server environment, resulting in better performance and increased user satisfaction. Overall, the SCA-C01 Exam is an excellent opportunity for individuals to demonstrate their expertise in Tableau Server administration and advance their careers in this field.

Tableau SCA-C01 certification is recognized globally and is highly respected in the data analytics industry. Tableau Server Certified Associate Exam certification demonstrates your proficiency in Tableau Server administration and shows that you are capable of managing and optimizing the platform to meet the needs of your organization. Earning the certification can open up new career opportunities, enhance your earning potential, and increase your credibility and reputation as a Tableau Server expert.

## Reliable SCA-C01 Source, Latest SCA-C01 Braindumps Questions

There are totally three versions of SCA-C01 practice materials which are the most suitable versions for you: PDF, software and app versions. We promise ourselves and exam candidates to make these SCA-C01 preparation prep top notch. So if you are in a dark space, our SCA-C01 Study Guide can inspire you make great improvements. With the high pass rate of our SCA-C01 learning engine as 98% to 100%, you can be confident and ready to pass the exam easily.

### Tableau Server Certified Associate Exam Sample Questions (Q182-Q187):

#### NEW QUESTION # 182

With Kerberos delegation, Tableau Server can use the Kerberos credentials of the viewer of a workbook or view to execute a query on behalf of the user. Select all the data sources where Tableau supports Kerberos delegation:

- A. SQL Server
- B. Vertica
- C. SAP HANA
- D. Oracle
- E. Teradata

**Answer: A,B,D,E**

Explanation:

Explanation

Link to Tableau Server documentation:

[https://help.tableau.com/current/server/en-us/kerberos\\_delegation.htm](https://help.tableau.com/current/server/en-us/kerberos_delegation.htm)

#### NEW QUESTION # 183

What account should you use to run the Tableau Server installation program?

- A. An NT AUTHORITY\NetworkService account
- B. An account in the local administrator group
- C. A domain user account
- D. A local user account

**Answer: B**

Explanation:

Installing Tableau Server on Windows requires an account with sufficient privileges to configure services, write to the file system, and manage registry settings. Let's analyze this in depth:

\* Installation Requirements:

\* The installer creates services (e.g., Tableau Server Gateway), writes to Program Files and ProgramData, and configures TSM.

\* It needs local administrative privileges on the machine to perform these tasks.

\* Post-install, a "Run As" account can be set for services (e.g., NT AUTHORITY\NetworkService), but this is separate from the install account.

\* Option C (An account in the local administrator group): Correct.

\* Why: The account must be in the local Administrators group to:

\* Install software (UAC elevation).

\* Configure services and ports.

\* Write to protected directories (e.g., C:\Program Files\Tableau).

\* Examples: A local admin (e.g., Administrator) or a domain user added to the Administrators group (e.g., DOMAIN\AdminUser).

\* Process: Log in as this account, run the installer, and provide TSM admin credentials during setup.

\* Option A (A local user account): Incorrect.

\* A standard local user (not in Administrators) lacks permissions-installation would fail with "Access Denied" errors.

\* Option B (A domain user account): Incorrect unless clarified.

\* A domain user without local admin rights can't install. If it's in the Administrators group, it qualifies, but C is more specific.

\* Option D (NT AUTHORITY\NetworkService): Incorrect.

\* This is a built-in service account for running services (default "Run As" post-install), not for executing the installer-an interactive user account is required.

Why This Matters: Using the right account prevents install failures and ensures secure configuration- critical for production setups.

### NEW QUESTION # 184

What two Tableau Services Manager (TSM) processes continue to run when Tableau Server is stopped?  
(Choose two.)

- A. VizQL Server
- B. License Manager
- C. Backgrounder
- D. Administration Controller

**Answer: B,D**

Explanation:

Tableau Server consists of multiple processes managed by TSM. When you stop Tableau Server (e.g., via `tsm stop`), most application processes halt, but some TSM-specific processes remain active to manage the server's infrastructure. Let's examine each:

\* TSM Processes: These include the Administration Controller, Administration Agent, and License Manager, which handle configuration, monitoring, and licensing.

\* Application Processes: These include VizQL Server, Backgrounder, Data Server, etc., which deliver Tableau's core functionality and stop when the server is stopped.

When `tsm stop` is executed:

\* The Administration Controller (port 8850) continues running to manage TSM operations (e.g., restarts, status checks).

\* The License Manager remains active to validate licenses and ensure compliance, even when the server is offline.

\* Application processes like VizQL Server and Backgrounder shut down, as they're tied to user-facing services.

\* Option B (License Manager): Correct. It persists to handle licensing tasks, ensuring the server can restart without license issues.

\* Option D (Administration Controller): Correct. It's the core TSM process, always running to accept commands and manage the server state.

\* Option A (VizQL Server): Incorrect. VizQL stops, as it renders visualizations for users—an application process tied to active server operation.

\* Option C (Backgrounder): Incorrect. Backgrounder stops, as it processes background tasks (e.g., extract refreshes), which halt when the server is down.

Why This Matters: Understanding which processes persist helps administrators troubleshoot and manage server lifecycle events effectively.

### NEW QUESTION # 185

Which of the following processes are NOT licensed? (Select all)

- A. Cluster Controller
- B. Data Engine
- C. Ask Data
- D. Application Server
- E. Backgrounder
- F. Cache Server

**Answer: A,B,F**

Explanation:

Explanation

Link to Tableau Server documentation:

<https://help.tableau.com/current/server/en-us/processes.htm>

### NEW QUESTION # 186

Which three data sources support Kerberos delegation with Tableau Server? (Choose three.)

- A. SQL Server
- B. SAP HANA
- C. PostgreSQL
- D. Teradata

**Answer: A,B,D**

Explanation:

Kerberos delegation allows Tableau Server to pass a user's Kerberos credentials to a data source for seamless authentication (SSO)-let's explore which sources support it:

\* Kerberos Overview:

\* Used with Active Directory (AD) for SSO in Windows environments.

\* Tableau Server delegates the user's ticket to the data source, avoiding embedded credentials.

\* Requires:

\* Data source support for Kerberos.

\* Proper configuration (e.g., SPN, constrained delegation).

\* Supported Data Sources: Per Tableau's documentation:

\* Option A (Teradata): Correct.

\* Details: Supports Kerberos delegation-common in enterprise data warehouses.

\* Config: Enable in TSM (tsm authentication kerberos configure) and set SPN for Teradata.

\* Option C (SQL Server): Correct.

\* Details: Fully supports Kerberos-widely used with AD-integrated SQL Server instances.

\* Config: Requires AD setup and "Trustworthy" delegation in SQL Server.

\* Option D (SAP HANA): Correct.

\* Details: Supports Kerberos SSO via delegation-popular in SAP ecosystems.

\* Config: Needs HANA Kerberos setup (e.g., keytab) and Tableau Server integration.

\* Option B (PostgreSQL): Incorrect.

\* Why: Supports Kerberos authentication natively, but Tableau Server doesn't enable delegation to PostgreSQL-users must embed credentials or use other methods (e.g., OAuth).

Why This Matters: Kerberos delegation enhances security by avoiding stored passwords-knowing supported sources ensures SSO feasibility.

## NEW QUESTION # 187

.....

Desktop Tableau Server Certified Associate Exam (SCA-C01) practice test software is the first format available at IteXamGuide. This format can be easily used on Windows PCs and laptops. The Tableau SCA-C01 practice exam software works without an internet connection, with the exception of license verification. One of the excellent features of this Tableau Server Certified Associate Exam (SCA-C01) desktop-based practice test software is that it includes multiple mock tests that have Tableau SCA-C01 practice questions identical to the actual exam, providing users with a chance to get Tableau Server Certified Associate Exam (SCA-C01) real exam experience before even attempting it.
