ServiceNow CIS-Discovery Vce Torrent - CIS-Discovery Latest Exam Book

Additionally, Pass4sures offers 12 months of free ServiceNow CIS-Discovery exam questions so that our customers prepare with the latest ServiceNow CIS-Discovery material. Perhaps the most significant concern for ServiceNow CIS-Discovery Certification Exam candidates is the cost. ServiceNow CIS-Discovery certification exam requires expensive materials, classes, and even flights to reach the exam centers.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q60-Q65):

NEW QUESTION # 60

What do most Discovery properties start with?

- A. discovery.prop
- B. glide.itom
- C. disco.release
- D. glide.discovery

Answer: D

Explanation:

In ServiceNow Discovery, most properties related to the Discovery module start with the prefix 'glide.discovery'. This naming convention is part of ServiceNow's system property design, where 'glide' typically indicates system properties and 'discovery' specifies that the property is related to the Discovery module. Properties are used to configure various aspects of the Discovery process, such as behavior, timeouts, and performance settings.

NEW QUESTION # 61

A Discovery Schedule contains a /24 subnet IP Range and a Shazzam batch size of 5000. How many times will a Shazzam probe be launched during discovery?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

NEW QUESTION # 62

Which of the choices below best represent key capabilities of a ServiceNow ITOM Enterprise solution? (Choose two.)

- A. Manage Hybrid Clouds
- B. Build New Apps Fast
- C. Proactively Eliminate Service Outages
- D. Create an Engaging User Experience

Answer: A,C

Explanation:

Based on the web search results from the search_web tool, the following choices best represent key capabilities of a ServiceNow ITOM Enterprise solution:

* Manage Hybrid Clouds: ServiceNow ITOM enables organizations to gain visibility into their IT environment, on-premises to cloud, and see the impact of their applications on business services¹². It also helps to plan, track, and secure cloud implementation through best-practice governance¹. Four apps comprise Cloud Accelerate to help prepare for cloud migration, streamline provisioning requests, and manage cloud resources¹.

* Proactively Eliminate Service Outages: ServiceNow ITOM helps to predict issues, reduce user impact, and automate resolutions with predictive AIOps and automation¹³. It analyzes telemetry and log data using AI to reduce noise, expedite mapping and predict issues¹. It also delivers proactive digital operations with real-time log data to solve problems quickly¹.

The other choices are not specific to ServiceNow ITOM Enterprise solution, but rather general features of the ServiceNow platform. The ServiceNow platform allows users to create an engaging user experience with intuitive interfaces and workflows. It also enables users to build new apps fast with low-code development tools and pre-built components.

NEW QUESTION # 63

Which of the following properties define the maximum overall size for the returned payload that comes from patterns?

- A. mid.discovery.max_pattern_payload_size
- B. mid.discovery.max_payload_size
- C. glide.discovery.payload_max
- D. cmdb.properties.payload_max_size

Answer: A

Explanation:

The mid.discovery.max_pattern_payload_size property defines the maximum overall size for the returned payload that comes from patterns. This property is set on the MID Server and applies to all patterns that run on that MID Server. If the payload size exceeds this limit, the pattern execution fails and an error message is logged in the ECC queue. The default value of this property is 10 MB1. 1: ServiceNow Docs - MID Server properties for Discovery and Service Mapping 2: ServiceNow Docs - Discovery payload size and processing

NEW QUESTION # 64

For CMDB Health, relationships can be which of the following choices? (Choose three.)

- A. Recommended
- B. Duplicate
- C. Required
- D. Stale
- E. Orphan

Answer: B,D,E

Explanation:

CMDB Health measures the quality of the data in the CMDB by testing it against predefined rules and metrics. One of the categories of these rules is Correctness, which tests the data against data integrity rules such as identification rules, orphan CI rules, and stale CI rules1. These rules help identify and flag the existing CMDB relationships that are not compliant with the suggested relationships2.

* Duplicate relationships are those that have more than one relationship of the same type between the same two CIs3. For example, if a server CI has two relationships of type "Depends on" with the same network CI, it is a duplicate relationship.

* Stale relationships are those that have not been updated for a specified period of time3. For example, if a server CI has a relationship of type "Runs on" with a virtual machine CI that has not been discovered for more than 60 days, it is a stale relationship.

* Orphan relationships are those that are missing a defined relationship within the CMDB3. For example, if a server CI has no relationship of type "Depends on" with any network CI, it is an orphan relationship.
