NEW QUESTION # 56

Which storage protocol is used by Nutanix Distributed Storage Fabric (DSF) to provide access to an ESXi hypervisor?

- A. LVM
- B. SMB
- C. NFS
- **D. iSCSI**

Answer: D

Explanation:

Nutanix Distributed Storage Fabric (DSF) provides storage access to an ESXi hypervisor using the NFS (Network File System) protocol. DSF abstracts the underlying storage hardware and exposes storage as an NFS datastore to ESXi hosts. This integration enables high performance, data protection, and scalability while simplifying storage management.

Other options:

- * LVM: Not used in Nutanix storage.
- * iSCSI: Used for specific use cases, not the default protocol for ESXi.
- * SMB: Not supported for ESXi environments.

Which statement best describes the Storage Pool?

- A. Group of Storage Containers
- B. Group of vDisks
- **C. Group of physical disks**
- D. Group of boot drives

Answer: C

Explanation:

The correct answer is B. Group of physical disks.

In Nutanix architecture:

- * A Storage Pool is the aggregation of physical storage devices (SSD, HDD) across all nodes in a cluster.
- * Each storage pool backs one or more Storage Containers, which are logical partitions used for data placement.
- * Storage pools cannot span clusters and are always confined to the cluster in which they are defined.

Clarifications:

- * A (Storage Containers): These are logical groupings within storage pools.
- * C (Boot Drives): These are not part of the pool.
- * D (vDisks): These exist within VMs and are backed by containers, not pools directly.
