NEW QUESTION # 734

A technician found that an employee is mining cryptocurrency on a work desktop. The company has decided that this action violates its guidelines. Which of the following should be updated to reflect this new requirement?

- A. MDM
- B. EULA
- C. AUP
- D. IRP

Answer: C

NEW QUESTION # 735

A user reports that text on the screen is too small. The user would like to make the text larger and easier to see. Which of the following is the BEST way for the user to increase the size of text, applications, and other items using the Windows 10 Settings tool?

- A. Open Settings select System, select Display, and change the Scale and layout setting to a higher percentage.
- B. Open Settings, select System, select Display, and change the display resolution to a lower resolution option.
- C. Open Settings select Personalization, select Display and change the Scale and layout setting to a higher percentage
- D. Open Settings select Devices, select Display, and change the display resolution to a lower resolution option

Answer: A

NEW QUESTION # 736

A technician cannot uninstall a system driver because the driver is currently in use. Which of the following tools should the technician use to help uninstall the driver?

- A. msconfig.exe
- B. dxdiag.exe
- C. msinfo32.exe
- D. regedit.exe

Answer: A

Explanation:

The msconfig.exe tool, also known as the System Configuration utility, is a tool that allows users to modify various system settings, such as startup options, services, boot options, and more. One of the features of msconfig.exe is the ability to disable or enable device drivers that are loaded during the system startup. By using msconfig.exe, a technician can prevent a driver from being loaded and used by the system, which will allow them to uninstall it without any errors. To use msconfig.exe to disable a driver, the technician can follow these steps:

* Open the Run dialog box by pressing the Windows key + R.

* Type msconfig.exe and press Enter.

* Click on the Boot tab and then click on Advanced options.

* Check the box next to No GUI boot and click OK. This will prevent the graphical user interface from loading during the boot process, which will also prevent some drivers from loading.

* Click on the Services tab and check the box next to Hide all Microsoft services. This will show only the third-party services and drivers that are running on the system.

* Find the service or driver that corresponds to the device that the technician wants to uninstall and uncheck the box next to it. This will disable the service or driver from starting during the system startup.

* Click Apply and OK and then restart the computer.

* After the computer restarts, the technician can use the Device Manager or the Control Panel to uninstall the driver that was previously in use.

NEW QUESTION # 737

A technician is securing a new Windows 10 workstation and wants to enable a Screensaver lock. Which of the following options in the Windows settings should the technician use?

- A. Ease of Access
- B. Personalization

- C. Update and Security
- D. Privacy

Answer: B

Explanation:

The technician should use the Personalization option in the Windows settings to enable a Screensaver lock.

The Personalization option allows users to customize the appearance and behavior of their desktop, such as themes, colors, backgrounds, lock screen and screensaver. The technician can enable a Screensaver lock by choosing a screensaver from the drop-down menu, setting a wait time in minutes and checking the box that says "On resume, display logon screen". This will lock the computer and require a password or PIN to log back in after the screensaver is activated. Ease of Access is an option in the Windows settings that allows users to adjust accessibility features and settings, such as narrator, magnifier, high contrast and keyboard shortcuts. Ease of Access is not related to enabling a Screensaver lock. Privacy is an option in the Windows settings that allows users to manage privacy and security settings, such as location, camera, microphone and app permissions. Privacy is not related to enabling a Screensaver lock. Update and Security is an option in the Windows settings that allows users to check and install updates, troubleshoot problems, backup files and restore system. Update and Security is not related to enabling a Screensaver lock. References: CompTIA A+ Core 2 (220-1102) Certification Exam Objectives Version 4.0, Domain 1.7
