"Counterfeit computer hardware increases the risk and likelihood of a successful cyber-attack". Is this statement False?

#### Option A :

Yes, because not all counterfeit products such as hardware are accessible to hackers to implant malware upfront so the likelihood of a cyber-attack is the same as buying genuine

#### Option B :

No, because it is the sole responsibility of the Procurement department to ensure that hardware being bought is not counterfeit which eliminates any possibility of cyber-attacks

#### Option C :

No, because the quality of the counterfeit product may not be high and fake hardware could include malware which increases the likelihood of a successful cyber-attack

#### Option D :

Yes, because counterfeit products are generally still of a high quality and can have cyber-security measures and systems installed to reduce the risk of any future cyber-attacks
