

GH-100 Reliable Test Objectives & PDF GH-100 Download

P.S. Free 2025 Microsoft GH-100 dumps are available on Google Drive shared by Actual4dump: <https://drive.google.com/open?id=1WPw5-IVGiBzC8PC3v-6Jkw2Vsb-5UXU>

Whereas the other two Actual4dump GH-100 exam questions formats are concerned, both are customizable practice tests, provide real time environment, track your progress, and help you overcome mistakes. The desktop Microsoft GH-100 Practice Test software is compatible with Windows computers. The web based practice exam is supported by all browsers and operating systems.

Microsoft GH-100 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CICD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps. |

| | |
|---------|---|
| Topic 2 | <ul style="list-style-type: none"> • Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users. |
| Topic 3 | <ul style="list-style-type: none"> • Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication. |
| Topic 4 | <ul style="list-style-type: none"> • Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts. |
| Topic 5 | <ul style="list-style-type: none"> • Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI • CD pipelines. |
| Topic 6 | <ul style="list-style-type: none"> • Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security. |

Latest Microsoft GH-100 Exam Questions in Three Formats

Actual4dump informs you that the GitHub Administration (GH-100) questions regularly change the content of the GitHub Administration real exam. Therefore, you must stay informed as per these changes to save time, money, and mental peace. As was already discussed, Actual4dump satisfies the needs of Microsoft GH-100 Exam candidates. The customer will receive updates of GitHub Administration (GH-100) real dumps for up to 365 days after buying the product.

Microsoft GitHub Administration Sample Questions (Q33-Q38):

NEW QUESTION # 33

When a user becomes a member of multiple GitHub organizations, which THREE of the following are important considerations for administrators? (Choose three.)

- A. The user's repository access and/or team membership needs to be managed separately for each organization.
- B. The user's profile information becomes private to non-organization members.
- C. The user's personal repositories will become accessible to all organizations.
- D. The user will need to authorize credentials separately for each SAML-enabled organization.
- E. The user will have different permission levels in each organization.
- F. The user will automatically have the same role across all organizations.

Answer: A,D,E

Explanation:

A user's repository access and team memberships are scoped to each organization, so admins must configure permissions separately per org.

When an organization enforces SAML SSO, each member must authorize their personal access tokens or SSH keys for that org, requiring separate approval for each SAML-enabled organization Roles and permission levels (owner, member, billing manager, repository roles, etc.) are assigned on a per-organization basis, so a user often has different permissions in different organizations.

NEW QUESTION # 34

Your organization is implementing team synchronization. Which of the following should you prioritize during the setup process?

- A. Clearly define how identity provider groups will align with GitHub teams and roles
- B. Setting an infrequent sync schedule to reduce performance impact
- C. Disabling the audit log stream
- D. Allowing manual updates to team memberships

Answer: A

Explanation:

Before you enable team synchronization, you should clearly define how groups in your identity provider will map to GitHub teams and roles - ensuring that when the sync runs, users land in the correct teams with the right permissions.

NEW QUESTION # 35

What is the potential consequence of enabling multiple rulesets that apply to the same branch in a repository?

- A. Rulesets will override each other, leading to unpredictable behavior
- B. Only organization-level rulesets are enforced over repository-level ones
- C. All applicable rulesets will be evaluated, and their combined rules enforced
- D. Only the most recently created ruleset will be enforced

Answer: C

Explanation:

If you enable multiple rulesets that target the same branch, GitHub will evaluate every matching ruleset and enforce the aggregate of their rules - so all constraints from all applicable rulesets apply.

NEW QUESTION # 36

You discover that a secret (e.g., a token or password) was accidentally committed to a GitHub repository. What is the first step you should take to mitigate the risk?

- A. Rewrite the repository history using git filter-repo or BFG Repo-Cleaner to remove the secret from all commits.
- B. Contact GitHub Support to remove the secret from all forks and clones of the repository.
- C. Delete the repository and create a new one to ensure the secret is no longer accessible.
- D. Revoke and/or rotate the secret to render it unusable, then assess whether history rewriting is necessary.

Answer: D

Explanation:

The immediate priority is to revoke or rotate the exposed credential so it can no longer be used; once it's invalidated, you can safely proceed with history-rewriting or other cleanup steps.

NEW QUESTION # 37

When a token is used to perform actions across different GitHub resources, how is this reflected in audit logs?

- A. Only the first repository accessed is recorded
- B. The audit log stores only the token name and not its actions
- C. Each API action made with the token generates a separate audit log entry
- D. GitHub creates a ZIP archive of all token activity

Answer: C

Explanation:

Each API call authenticated with a token generates its own audit-log event, so you'll see a distinct entry for every action performed across different resources, each annotated with the token's hashed ID, actor, and source IP.

NEW QUESTION # 38

.....

Nowadays the knowledge capabilities and mental labor are more valuable than the manual labor because knowledge can create more wealth than the manual labor. If you boost professional knowledge capabilities in some area you are bound to create a lot of values and can get a good job with high income. Passing the test of GH-100 Certification can help you achieve that, and our GH-100 study materials are the best study materials for you to prepare for the test.
