Prep4pass GH-100 practice test has real GH-100 exam questions. You can change the difficulty of these questions, which will help you determine what areas appertain to more study before taking your Microsoft GH-100 Exam Dumps. Here we listed some of the most important benefits you can get from using our Microsoft GH-100 practice questions.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	• Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.

Topic 2	• Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.
Topic 3	• Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.
Topic 4	• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI • CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.
Topic 5	• Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI • CD pipelines.
Topic 6	• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.

New GH-100 Valid Test Pass4sure | Pass-Sure Microsoft GH-100: GitHub Administration 100% Pass

All these three GH-100 real dumps formats contain the actual and updated GitHub Administration GH-100 exam questions that will surely repeat in the upcoming GH-100 exam and you can easily pass it with good scores. Today is the best time to learn new in-demand skills and upgrade your knowledge. Yes, you can do this easily. Just enroll in the GitHub Administration GH-100 Exam and start preparation with GitHub Administration GH-100 exam dumps. The updated, real, and verified Microsoft Dumps are ready for download. Just pay affordable GitHub Administration GH-100 exam dumps charges and get the exam dumps file in your mailbox and start Prep4pass GH-100 exam preparation.

Microsoft GitHub Administration Sample Questions (Q63-Q68):

NEW QUESTION # 63

Which Git operation is not included in the Git activity audit log?

- A. Fetch
- B. Clone
- C. Delete branch
- D. Push

Answer: C

Explanation:

Delete branch operations aren't tracked as Git-activity events; the Git activity audit log only records Git events such as clone, fetch (pull), and push.

NEW QUESTION # 64

What distinguishes Enterprise Managed Users (EMUs) from standard GitHub accounts?

- A. EMUs are only available for GitHub Enterprise Server
- B. EMUs can only be created using email invites
- **C. EMUs are fully controlled by an IdP and cannot log in with personal credentials**
- D. EMUs are managed in GitHub and use GitHub authentication

Answer: C

Explanation:

EMU accounts are provisioned and authenticated exclusively through your identity provider - users sign in via the IdP and cannot use or manage GitHub-native credentials.

NEW QUESTION # 65

Which THREE of the following accurately describe how the SCIM protocol enhances user management in GitHub Enterprise Cloud? (Choose three.)

- **A. SCIM deactivates GitHub accounts when users are deleted from the identity provider.**
- B. SCIM automatically deletes organization repositories when administrators are removed.
- C. SCIM configures repository permissions based on user roles within the organization.
- D. SCIM generates authentication tokens for accessing GitHub's REST API.
- **E. SCIM synchronizes changes to user attributes from the identity provider to GitHub.**
- F. SCIM automates user provisioning when new users are added to the identity provider.

Answer: A,E

Explanation:

SCIM automatically updates a user's account on GitHub whenever their profile attributes change in the identity provider.

When a user is removed or deactivated in the IdP, SCIM deactivates (soft-deprovisions) their GitHub account and disables access.

SCIM provisions new GitHub Enterprise Cloud accounts automatically when users are added in the identity provider.

NEW QUESTION # 66

Our organization is updating its enterprise policies. Which of the following steps should you take to ensure alignment with security requirements?

- A. Implement changes without consulting stakeholders.
- B. Regularly assess and adjust policies based on evolving risks.
- **C. Implement the new enterprise policies across the organization first and then consult with the security team to identify- any necessary adjustments or retrofits**
- **D. Maintain clear documentation of existing policies and policy changes.**

Answer: C,D

NEW QUESTION # 67

What is a key characteristic of GitHub Enterprise Server (GHES) compared to GitHub Enterprise Cloud (GHEC)?

- **A. GHES allows enterprises to have complete control over their hosting environment, including data storage and network security policies.**
- B. GHEC offers data residency options in regions that GHES does not support.
- C. GHES is hosted by GitHub and offers automatic scaling, while GHEC requires self-hosting.
- D. GHES users cannot integrate with external identity providers for authentication.

Answer: A

Explanation:

GitHub Enterprise Server is a self-hosted product you install and manage on your own infrastructure - giving you full control over data storage, network security policies, and the underlying environment.
