

GH-200 Exam Course, Valid Braindumps GH-200 Pdf

BTW, DOWNLOAD part of Prep4pass GH-200 dumps from Cloud Storage: <https://drive.google.com/open?id=1vSm0CFKSXPHUsB70hk8EdLb4d54vWB3z>

The actual Microsoft GH-200 exam questions are in PDF format for the one who wants to study offline. The actual Microsoft GH-200 exam questions are in simple PDF form. The PDF format is suitable both for smartphones as well as tablets. You can print documents and study anywhere. The plus point is that the PDF version is updated regularly to improve its GH-200 Exam Questions and reflect changes in the syllabus of the exam.

Microsoft GH-200 Exam Syllabus Topics:

Topic	Details
Topic 1	• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.
Topic 2	• Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.
Topic 3	• Author and Maintain Actions: This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.

Topic 4	• Author and Maintain Workflows: This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.

2025 Useful GH-200 Exam Course | GitHub Actions 100% Free Valid Braindumps Pdf

If you prepare well in advance, you'll be stress-free on the GitHub Actions GH-200 exam day and thus perform well. Candidates can know where they stand by attempting the Microsoft GH-200 practice test. It can save you lots of time and money. The question on the Microsoft GH-200 Practice Test is quite similar to the Microsoft GH-200 questions that get asked on the GH-200 exam day.

Microsoft GitHub Actions Sample Questions (Q70-Q75):

NEW QUESTION # 70

As a developer, your Actions workflow often reuses the same outputs or downloaded dependencies from one run to another. To cache dependencies for a job, you are using the GitHub cache action. Which input parameters are required for this action? (Choose two.)

- A. ref: the ref name of the branch to access and restore a cache created
- **B. key: the key created when saving a cache and the key used to search for a cache**
- C. cache-hit: the copy action key used with restore parameter to restore the data from the cache
- **D. path: the file path on the runner to cache or restore**
- E. restore-keys: the copy action key used with cache parameter to cache the data
- F. dependency: the name and version of a package to cache or restore

Answer: B,D

Explanation:

The key is required because it uniquely identifies the cache. It is used to store and retrieve cached data. When creating or restoring a cache, you need to define a key that will be used to identify the cache.

The path is the file path on the runner that you want to cache. This is where the cached files or dependencies are located and should be specified to tell GitHub where to store or retrieve the cache from.

NEW QUESTION # 71

What are the mandatory requirements for publishing GitHub Actions to the GitHub Marketplace?
(Each correct answer presents part of the solution. Choose two.)

- A. The action's name cannot match a user or organization on GitHub unless the user or organization owner is publishing the action.
- B. Each repository can contain a collection of actions as long as they are under the same Marketplace category.
- **C. The action's metadata file must be in the root directory of the repository.**
- D. The action can be either in a public or private repository.
- E. The name should match with one of the existing GitHub Marketplace categories.

Answer: C

Explanation:

Publishing actions in GitHub Marketplace

You can publish actions in GitHub Marketplace and share actions you've created with the GitHub community.

Prerequisite include:

[B] Each repository must contain a single action metadata file (action.yml or action.yaml) at the root.

The name in the action's metadata file must be unique.

The name cannot match an existing action name published on GitHub Marketplace.

[C] The name cannot match a user or organization on GitHub, unless the user or organization owner is publishing the action. For example, only the GitHub organization can publish an action named github.

Reference:

<https://docs.github.com/en/actions/how-to/create-and-publish-actions/publish-in-github-marketplace>

NEW QUESTION # 72

You need to make a script to retrieve workflow run logs via the API. Which is the correct API to download a workflow run log?

- A. POST /repos/:owner/:repo/actions/runs/run_id/logs
- B. POST /repos/:owner/:repo/actions/runs/run_id
- C. GET /repos/:owner/:repo/actions/artifacts/logs
- **D. GET /repos/:owner/:repo/actions/runs/run_id/logs**

Answer: D

Explanation:

The GET /repos/:owner/:repo/actions/runs/run_id/logs API endpoint is used to retrieve the logs of a specific workflow run identified by run_id. This is the correct method for downloading logs from a workflow run.

NEW QUESTION # 73

A development team has been using a Powershell script to compile and package their solution using existing tools on a Linux VM, which has been configured as a self-hosted runner. They would like to use the script as-is in an automated workflow. Which of the following should they do to invoke their script within a workflow step?

- A. Configure a self-hosted runner on Windows with the requested tools.
- B. Use the YAML powershell: step.
- **C. Use the YAML shell: pwsh in a run step.**
- D. Use the actions/run-powershell action to invoke the script.
- E. Run the pwsh2bash command to convert the script so it can be run on Linux.

Answer: C

Explanation:

Since the self-hosted runner is configured on a Linux VM and the script is written in PowerShell, you can invoke the script using the pwsh (PowerShell Core) shell in a run step in the workflow. This ensures that the script runs as-is on the Linux runner, as PowerShell Core (pwsh) is cross-platform and supports Linux.

NEW QUESTION # 74

What is the right method to ensure users approve a workflow before the next step proceeds?

- A. creating a branch protection rule and only allow certain users access
- B. granting users repository approval permissions
- **C. adding users as required reviewers for an environment**
- D. granting users workflow approval permissions

Answer: C

Explanation:

GitHub Actions allows you to configure environment protection rules, where you can require specific users or teams to approve the deployment before the workflow proceeds to the next step. This ensures that the required reviewers approve the workflow before any sensitive actions (such as deployment) occur.

NEW QUESTION # 75

.....

How you can gain the GH-200 certification with ease in the least time? The answer is our GH-200 study materials for we have engaged in this field for over ten years and we have become the professional standard over all the exam materials. You can free download the demos which are part of our GH-200 Exam Braindumps, you will find that how good they are for our professionals devote of themselves on compiling and updating the most accurate content of our GH-200 exam questions.
