GH-900 Certification Practice & Reliable GH-900 Test Bootcamp

The pass rate is 98.75%, and we will ensure you pass the exam if you buy GH-900 exam torrent from us. Since the high pass rate, we have received many good feedbacks from candidates. What's more, we pass guarantee and money back guarantee if you fail to pass the exam after purchasing GH-900 Exam Torrent from us. We have online and offline chat service stuff, and they possess the professional knowledge about the GH-900 exam dumps, if you have any questions, just have a chat with them.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 2	• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
Topic 3	• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.

The client can try out and download our Microsoft GH-900 Training Materials freely before their purchase so as to have an understanding of our product and then decide whether to buy them or not. The website pages of our product provide the details of our GitHub Foundations learning questions.

Microsoft GitHub Foundations Sample Questions (Q44-Q49):

NEW QUESTION # 44
What is the minimum access needed to contribute to a repository?

- A. Triage
- B. Write
- C. Maintain
- D. Read

Answer: B

Explanation:
To contribute to a GitHub repository, a user typically needs to be able to create branches, push changes, and open pull requests. These actions require Write access, which is the minimum level of access needed to contribute code directly to a repository.
Write Access:
Option D is correct because "Write" access allows users to contribute to the repository by pushing changes, creating branches, and opening pull requests. This is the minimum required access level for contributing code.
Incorrect Options:
Option A (Read) is incorrect because "Read" access only allows viewing the repository, not making changes.
Option B (Triage) is incorrect because while Triage access allows managing issues and pull requests, it does not allow pushing code.
Option C (Maintain) is incorrect because "Maintain" access includes additional permissions beyond those needed for basic contributions, such as managing repository settings.

NEW QUESTION # 45
In GitHub, why is it recommended to deploy from your feature branch before merging into the main branch?

- A. To ensure the changes are verified and validated in a production environment
- B. To directly deploy changes from the main branch without any intermediate testing
- C. To avoid the need for testing changes in production
- D. To speed up the process of merging changes into the main branch

Answer: A

Explanation:
It is recommended to deploy from your feature branch before merging into the main branch to ensure the changes are verified and validated in a production environment. This practice helps in identifying any potential issues or bugs in a real-world scenario before the changes are permanently integrated into the main branch. By deploying from the feature branch, developers can catch and address issues early, reducing the risk of introducing bugs into the main branch, which is usually considered the stable branch.

NEW QUESTION # 46
Which of the following is always true about the feature preview phases Alpha and Beta?

- A. Alpha features are not available to the public.
- B. Beta features provide technical support.
- C. Alpha and Beta features offer Service Level Agreements (SLAs).
- D. Alpha features are documented.

Answer: A

Explanation:
The terms Alpha and Beta are often used in software development to describe different stages of feature testing and release.
Alpha Features:

Option A is correct because Alpha features are typically in the early stages of development and are not available to the public. They are usually tested internally or by a limited audience.
Incorrect Options:
Option B is incorrect because Alpha features are often undocumented as they are in the early development phase.
Option C is incorrect because Alpha and Beta features usually do not offer Service Level Agreements (SLAs) due to their experimental nature.
Option D is incorrect because Beta features might offer limited support, but it is not guaranteed, especially compared to fully released features.

NEW QUESTION # 47
Which of the following can be performed within GitHub Mobile?

- A. Forking and cloning repositories
- B. Chat with other GitHub Mobile users via voice calling
- C. Utilizing the mobile device as a self-hosted runner
- D. Managing notifications from github.com
- E. Managing enterprise and organization settings

Answer: D

Explanation:
GitHub Mobile provides a streamlined experience for managing your GitHub notifications and participating in discussions, but it does not offer full functionality compared to the desktop or web interface.
Managing Notifications:
Option E is correct because GitHub Mobile allows users to manage notifications, keeping them up to date with their repositories, issues, pull requests, and other activities on GitHub.
Incorrect Options:
Option A is incorrect because GitHub Mobile cannot be used as a self-hosted runner.
Option B is incorrect because managing enterprise and organization settings is not supported in GitHub Mobile.
Option C is incorrect because GitHub Mobile does not offer a chat or voice calling feature.
Option D is incorrect because forking and cloning repositories are not actions available in GitHub Mobile.

NEW QUESTION # 48
What folder is the definition files stored in when creating custom issue forms?

- A. .issues
- B. .GitHub
- C. .issues/ISSUE_TEMPLATE
- D. .github/ISSUE_TEMPLATE

Answer: D

Explanation:
When creating custom issue forms on GitHub, the definition files are stored in the .github/ISSUE_TEMPLATE folder. This directory is used to define issue templates and forms that help standardize the information collected when users open new issues in the repository. The .github folder is a special directory used for various repository configurations and workflows.
