Newest GH-900 Testking - Unparalleled GH-900 Exam Tool Guarantee Purchasing Safety

To pass Microsoft GH-900 certification exam seems to be a very difficult task. Having registered GH-900 test, are you worrying about how to prepare for the exam? If so, please see the following content, I now tell you a shortcut through the GH-900 Exam. The certification training dumps that can let you pass the test first time have appeared and it is RealValidExam Microsoft GH-900 exam dumps. If you would like to sail through the test, come on and try it.

Microsoft GitHub Foundations Sample Questions (Q34-Q39):

NEW QUESTION # 34
Workflows can reference actions in:
(Each correct answer presents a complete solution. Choose three.)

- A. The same repository as your workflow file.
- B. Any public repository.
- C. A published Docker container image on Docker Hub.
- D. An enterprise marketplace.
- E. GitHub Packages.

Answer: A,B,C

Explanation:
In GitHub Actions workflows, actions can be referenced from various sources depending on the needs of the workflow.
Any Public Repository:
Option A is correct. Actions can be referenced from any public GitHub repository, allowing the reuse of shared actions across multiple projects.
The Same Repository as Your Workflow File:
Option B is correct. Actions stored in the same repository as the workflow file can be referenced directly, which is common for custom actions specific to that project.
A Published Docker Container Image on Docker Hub:
Option E is correct. Workflows can reference actions that are provided as Docker container images hosted on Docker Hub, allowing integration of complex tools and environments.
Incorrect Options:
Option C (GitHub Packages) is incorrect as it is more commonly used for storing and managing dependencies, not actions.
Option D (An enterprise marketplace) is incorrect because GitHub Actions are not directly referenced from an enterprise marketplace but rather from public repositories or Docker images.

GitHub Docs: Reusing Workflows

NEW QUESTION # 35
How can a user create a repository template, and what permissions are required?

- A. With Admin permissions, navigate to Organization settings, select the repository, and choose Template Repository.
- B. With Maintain permissions, navigate to Organization settings, select the repository, and choose Template Repository.
- C. With Admin permissions, navigate to Repository settings and select Template Repository.
- D. With Maintain permissions, navigate to Repository settings and select Template Repository.

Answer: C

Explanation:
Creating a repository template in GitHub requires specific steps and permissions:
Creating a Repository Template:
Option A is correct because a user with Admin permissions can navigate to the repository's settings and enable the "Template Repository" option. This allows other users to generate new repositories from this template, which includes all branches, tags, and file history.
Other Options:
Option B is incorrect because "Maintain" permissions do not allow the creation of repository templates, and the option is not found in Organization settings but in the repository settings.
Option C is incorrect because the "Template Repository" option is in the repository settings, not in Organization settings.
Option D is incorrect because "Maintain" permissions do not grant the ability to create a repository template.

GitHub Docs: Creating a Template Repository

NEW QUESTION # 36
What is the difference between an organization member and an outside collaborator?

- A. Outside collaborators cannot be given the admin role on a repository.
- B. Organization base permissions do not apply to outside collaborators.
- C. Outside collaborators do not consume paid licenses.
- D. Two-factor authentication (2FA) is not required for outside collaborators.

Answer: B

Explanation:
In GitHub, an organization member is a user who has been added to an organization and is subject to the organization's base permissions and policies. An outside collaborator is a user who is not a member of the organization but has been granted access to one or more repositories within the organization.
Here's the difference between an organization member and an outside collaborator:
Organization Members:
Members are subject to the organization's base permissions, which apply across all repositories within the organization. These permissions might include read, write, or admin access, depending on what has been set as the default.
Members consume paid licenses if the organization is on a paid plan.
Members are required to have two-factor authentication (2FA) if the organization enforces it.
Outside Collaborators:
Outside collaborators do not have organization-wide permissions. They only have access to specific repositories to which they have been granted permission. This means organization base permissions do not apply to them (making option A correct).
Outside collaborators do not consume paid licenses. They are only counted toward the license if they are made organization members.
Outside collaborators can be granted any level of permission, including the admin role on specific repositories.
Two-factor authentication (2FA) can be enforced for outside collaborators at the repository level, depending on the organization's security settings.
Given this information, option A is the correct answer: "Organization base permissions do not apply to outside collaborators."

NEW QUESTION # 37
What is a gist?

- A. Git repository
- B. GitHub app
- C. GitHub Pages site
- D. Markdown document

Answer: A

Explanation:
A gist on GitHub is essentially a Git repository, albeit a simplified one, designed for sharing snippets of code, notes, or other text content. Gists support version control and can be public or secret.
Gist as a Git Repository:
Option B is correct because each gist is a Git repository, meaning you can clone it, commit changes, and even fork it, just like any other Git repository.
Incorrect Options:
Option A is incorrect because a gist is not an app; it's a feature of GitHub that provides a simplified repository.
Option C is incorrect because while a gist may contain Markdown documents, it is fundamentally a repository that can hold various file types.
Option D is incorrect because GitHub Pages is a separate service for hosting websites, not related to gists.

GitHub Docs: About Gists

NEW QUESTION # 38
Which of the following GitHub syntax formats is consistent with the associated text?

- A. 1. This is an ordered list

- B. * This is a heading
- C. This is a link
- D. This is bolded text
- E. <!-- This is a comment -->

Answer: E

Explanation:
GitHub supports various syntax formats that align with Markdown and HTML conventions. Here's a breakdown of the provided options:
Comment Syntax:
Option C is correct. The syntax <!-- This is a comment --> is used in Markdown files to insert comments. These comments will not be rendered in the final output, making them useful for adding notes or instructions within the code or documentation.
Incorrect Options:
Option A (* This is a heading) is incorrect because an asterisk (*) denotes an unordered list item, not a heading. A heading in Markdown is typically created with one or more hash symbols (#).
Option B (This is a link) is incorrect because this is plain text and not the syntax for creating a link. The correct syntax would be [This is a link](URL).
Option D (This is bolded text) is incorrect because this is plain text, not the correct Markdown syntax for bold text, which should be **This is bolded text** or __This is bolded text__.
Option E (1. This is an ordered list) is incorrect as it does represent an ordered list item, but it was not the syntax format asked about in the question. The question specifically focuses on matching associated text with syntax, where only the comment option is correct.
