## 2025 Microsoft GH-900: Perfect GitHub Foundations Valid Cram Materials

DumpStillValid offers accurate and reliable study materials to help you prepare for the Microsoft GH-900 Exam. They have prepared the best Microsoft GH-900 Exam Questions that provide authentic and reliable material. With DumpStillValid, many candidates have succeeded in passing the Microsoft GH-900 Exam.

## Microsoft GH-900 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI<br>• CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews. |
| Topic 2 | • Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress. |
| Topic 3 | • Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members. |
| Topic 4 | • Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI<br>• CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects. |
| Topic 5 | • Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects. |

# Microsoft GitHub Foundations Sample Questions (Q41-Q46):

**NEW QUESTION # 41**
What features are offered by Copilot for Business that are not offered by Copilot for individuals?
(Each answer presents a complete solution. Choose three.)

- A. Blocks suggestions matching public code
- B. Offers multi-line function suggestions
- C. VPN proxy support via self-signed certificates
- D. Plugs directly into the editor
- E. Organization-wide policy management
- F. Support for organization or enterprise GitHub accounts

**Answer: A,E,F**

Explanation:
GitHub Copilot for Business offers several features that are tailored to the needs of organizations, providing more control, security, and support compared to the individual version.
Organization-wide Policy Management:
Option B is correct because Copilot for Business allows organizations to manage policies across their entire user base, providing control over how Copilot is used within the organization.
Blocking Suggestions Matching Public Code:
Option C is correct because Copilot for Business includes enhanced security features, such as blocking code suggestions that match public code to prevent inadvertent use of unlicensed code.
Support for Organization or Enterprise GitHub Accounts:
Option E is correct because Copilot for Business supports integration with GitHub Enterprise accounts, offering additional administrative controls and integration capabilities.
Incorrect Options:
Option A (multi-line function suggestions) is a feature available in both individual and business versions, so it does not differentiate

the business offering.

Option D (VPN proxy support via self-signed certificates) is not a primary differentiator of Copilot for Business.

Option F (plugs directly into the editor) is true for both individual and business versions, so it is not unique to Copilot for Business.

## NEW QUESTION # 42

What are some scenarios that can automatically subscribe you to conversations on GitHub?

(Each answer presents a complete solution. Choose three.)

- A. Being added as a repo admin
- B. Being assigned to an issue or pull request
- C. Commenting on a thread
- D. Opening a pull request or issue
- E. Pushing a commit to the default branch

**Answer: B,C,D**

Explanation:

On GitHub, certain actions automatically subscribe you to conversations so that you receive notifications about further activity in that thread.

Opening a Pull Request or Issue:

Option C is correct because when you open a pull request or issue, you are automatically subscribed to the conversation and will receive notifications for any updates.

Commenting on a Thread:

Option D is correct because commenting on an issue or pull request automatically subscribes you to that thread, ensuring you are notified of further comments or changes.

Being Assigned to an Issue or Pull Request:

Option E is correct because when you are assigned to an issue or pull request, you are automatically subscribed to notifications related to it.

Incorrect Options:

Option A is incorrect because pushing a commit to the default branch does not automatically subscribe you to conversations.

Option B is incorrect because being added as a repo admin does not automatically subscribe you to specific conversations unless you engage with them.

GitHub Docs: Subscribing to Notifications

## NEW QUESTION # 43

Which of the following is the best GitHub feature for long-form documentation for a project?

- A. Projects
- B. Insights
- C. Wikis
- D. Pull Requests

**Answer: C**

Explanation:

GitHub offers a variety of features for different aspects of project management and documentation. For long-form documentation, the best feature is Wikis. Wikis in GitHub allow you to create detailed, structured documentation that is easy to navigate and edit. Each repository in GitHub can have its own Wiki, which acts as a space for collaborators to maintain project documentation, guides, manuals, or any other long-form content.

Wikis are specifically designed to host extensive documentation in a way that is easy to reference and edit over time. They support Markdown, allowing you to format your documentation effectively. Unlike the other options, Wikis are explicitly intended for the purpose of long-form content, making them the best choice for this use case.

## NEW QUESTION # 44

What should be done to locate an existing action that was provided by a GitHub-approved vendor?
(Each correct answer presents part of the solution. Choose two.)

- A. Install the GitHub App that was provided by the vendor.
- B. Add the vendor as an allowed Actions Source.
- C. Search the GitHub Marketplace for Actions by the vendor.
- D. Search the vendor's website for a github.yaml index.
- E. Create a new workflow file.
- F. Confirm that the action has a verification badge.

**Answer: C,F**

Explanation:
To locate an existing GitHub Action provided by a GitHub-approved vendor, you can use the following methods:
Verification Badge:
Option C is correct because actions provided by GitHub-approved vendors will typically have a verification badge. This badge indicates that the action is from a trusted source, giving users confidence in its security and reliability.
Search the GitHub Marketplace:
Option F is correct because GitHub Marketplace is the official location to find and install actions, including those provided by third-party vendors. You can search for actions by the vendor's name to find the specific one you need.
Incorrect Options:
Option A is not necessary to locate an existing action; creating a workflow file is for implementing the action, not locating it.
Option B is incorrect because searching the vendor's website for a github.yaml index is not a standard practice for finding actions.
Option D is incorrect because installing a GitHub App is unrelated to finding an existing action.
Option E is incorrect because adding a vendor as an allowed Actions Source is a configuration step for using the action, not for locating it.

GitHub Marketplace: Verified Actions

**NEW QUESTION # 45**
What is the difference between an organization member and an outside collaborator?

- A. Outside collaborators cannot be given the admin role on a repository.
- B. Two-factor authentication (2FA) is not required for outside collaborators.
- C. Organization base permissions do not apply to outside collaborators.
- D. Outside collaborators do not consume paid licenses.

**Answer: C**

Explanation:
In GitHub, an organization member is a user who has been added to an organization and is subject to the organization's base permissions and policies. An outside collaborator is a user who is not a member of the organization but has been granted access to one or more repositories within the organization.
Here's the difference between an organization member and an outside collaborator:
Organization Members:
Members are subject to the organization's base permissions, which apply across all repositories within the organization. These permissions might include read, write, or admin access, depending on what has been set as the default.
Members consume paid licenses if the organization is on a paid plan.
Members are required to have two-factor authentication (2FA) if the organization enforces it.
Outside Collaborators:
Outside collaborators do not have organization-wide permissions. They only have access to specific repositories to which they have been granted permission. This means organization base permissions do not apply to them (making option A correct).
Outside collaborators do not consume paid licenses. They are only counted toward the license if they are made organization members.
Outside collaborators can be granted any level of permission, including the admin role on specific repositories.
Two-factor authentication (2FA) can be enforced for outside collaborators at the repository level, depending on the organization's security settings.
Given this information, option A is the correct answer: "Organization base permissions do not apply to outside collaborators."
