

GIAC GICSP Most Reliable Questions, Training GICSP Materials

If you want to know more about our test preparations materials, you should explore the related GICSP exam Page. You may go over our GICSP brain dumps product formats and choose the one that suits you best. You can also avail of the free demo so that you will have an idea how convenient and effective our GICSP exam dumps are for GICSP certification. With DumpsActual, you will not only get a single set of PDF dumps for GICSP Exams but also a simulate software for real exams. Rather we offer a wide selection of braindumps for all other exams under the GICSP certification. This ensures that you will cover more topics thus increasing your chances of success. With the multiple learning modes in GICSP practice exam software, you will surely find your pace and find your way to success.

If you can get the certification for GICSP exam, then your competitive force in the job market and your salary can be improved. We can help you pass your exam in your first attempt and obtain the certification successfully. GICSP exam braindumps are high-quality, they cover almost all knowledge points for the exam, and you can master the major knowledge if you choose us. In addition, GICSP Test Dumps also contain certain quantity, and it will be enough for you to pass the exam. We offer you free demo for you to have a try, so that you can have a deeper understanding of what you are going to buy.

Free PDF Quiz 2025 GIAC Professional GICSP Most Reliable Questions

With the protection of content and learning methods on our GICSP study guide, you will not have to worry about your exam at all. Of course, if you have any suggestions for our GICSP training materials, you can give us feedback. Our team of experts will certainly consider your suggestions. Perhaps the next version upgrade of GICSP Real Exam is due to your opinion. In order to thank you for your support, we will also provide you with some benefits.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q62-Q67):

NEW QUESTION # 62

What is an output of a Business Impact Analysis?

- A. Understanding all of the business's technology functions
- B. Calculating the financial impact of a technology failure
- C. Determining the maximum time that systems can be offline
- **D. Prioritizing the business's processes**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A Business Impact Analysis (BIA) primarily produces a prioritization of the business's processes (B) based on their criticality and impact on organizational goals.

While BIAs help understand downtime tolerance (A) and financial impacts (C), prioritization is the core output guiding recovery efforts.

Understanding technology functions (D) is part of broader asset and risk management but not the primary BIA output.

GICSP highlights BIA as essential for aligning ICS recovery priorities with business needs.

NEW QUESTION # 63

For a SQL injection login authentication bypass to work on a website, it will contain a username comparison that the database finds to be true. What else is required for the bypass to work?

- A. Two pipe characters (||)
- B. An unencrypted login page
- **C. The database's comment characters**
- D. The correct password

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SQL injection attacks often exploit the ability to inject SQL code into input fields to alter the logic of database queries. To bypass authentication, attackers often:

Use database comment characters (B) (e.g., -- in many SQL dialects) to ignore the rest of the original query, effectively bypassing the password check.

An unencrypted login page (A) is unrelated to the SQL injection logic.

Two pipe characters (||) (C) are logical OR operators in some databases but not universally required.

The correct password (D) is not required for bypass in SQL injection scenarios.

GICSP training covers SQL injection and defensive coding practices as common ICS web application vulnerabilities.

NEW QUESTION # 64

What does the following command accomplish?

```
$ chroot /home/jdoe /bin/bash
```

- A. Grants the jdoe user account root privileges when using a bash shell
- B. Assigns root privileges to the /home/jdoe and /bin/bash directories
- C. Modifies ownership of the /home/jdoe and /bin/bash directories to root
- **D. Changes the root directory (/) to /home/jdoe for the associated user**

Answer: D

Explanation:

The chroot command changes the apparent root directory (/) for the current running process and its children to the specified directory-in this case, /home/jdoe.

This "jails" the shell (bash) into /home/jdoe, limiting file system access to that subtree.

It does not change ownership (A), grant privileges (B or C), but provides a confined environment (sandbox).

GICSP discusses chroot as a containment and security mechanism in ICS system hardening.

NEW QUESTION # 65

Which document should be updated to include incident handling while in the Planning phase of incident response?

- A. Backup policy
- **B. Disaster recovery plan**
- C. Access control policy
- D. Vulnerability report

Answer: B

Explanation:

The Disaster Recovery Plan (DRP) (A) is the document that should incorporate incident handling procedures during the planning phase. It details how to respond to and recover from incidents to restore normal operations.

Access control policy (B) governs permissions.

Backup policy (C) describes data backup processes but not incident handling.

Vulnerability report (D) is an assessment document, not a procedural plan.

GICSP underscores integrating incident response within disaster recovery planning to ensure comprehensive preparedness.

GICSP Official Study Guide, Domain: ICS Security Operations & Incident Response NIST SP 800-34 Rev 1 (Contingency Planning) GICSP Training on Incident Response and Recovery Planning

NEW QUESTION # 66

Which of the following is typically performed during the Recovery phase of incident response?

- **A. Patching and configuring systems to meet established secure configuration standards.**
- B. Finding the root cause or vector used by the attacker to gain entry and maintain access.
- C. Making a forensic image of the system(s) involved in the incident.
- D. Updating the organization's security policies to prevent future breaches.

Answer: A

Explanation:

The Recovery phase in incident response focuses on restoring systems to normal operations and strengthening defenses:

Patching and configuring systems to meet secure standards (B) is a typical recovery activity to prevent recurrence.

Updating security policies (A) is usually part of the Post-Incident Activities or Governance.

Root cause analysis (C) is typically part of the Investigation or Analysis phase.

Forensic imaging (D) is part of the Containment and Eradication phases for evidence preservation.

GICSP aligns recovery activities with system hardening and return to normal operations.
