

GIAC GICSP Web-Based Practice Test Software

The exam time is coming, while you are not prepared well for GICSP real test. Please do not be tense and worried, you can pass your GICSP actual exam very simply and easily with Pass4Test GICSP free pdf dumps. With the help of GIAC GICSP free pdf practice, you can not only get high score in your actual test, but also can get more technology knowledge and be more professional.

Do not worry because GIAC GICSP exams are here to provide you with the exceptional GIAC GICSP Dumps exams. GIAC GICSP dumps Questions will help you secure the GIAC GICSP certificate on the first go. As stated above, Global Industrial Cyber Security Professional (GICSP) resolve the issue the aspirants encounter of finding reliable and original certification Exam Questions.

Latest GICSP Test Prep & New GICSP Test Book

When you first contact our software, different people will have different problems. Maybe you are not comfortable with our GICSP exam question and want to know more about our products and operations. As long as you have questions, you can send e-mail to us, we have online staff responsible for ensuring 24-hour service to help you solve all the problems about our GICSP Test Prep. After you purchase our GICSP quiz guide, we will still provide you with considerate services. Maybe you will ask whether we will charge additional service fees.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q13-Q18):

NEW QUESTION # 13

An organization has their ICS operations and networking equipment installed in the Purdue model level 3. Where should the SIEM for this equipment be placed in relation to the existing Level 3 devices?

- A. On a different subnet in Level 3
- **B. On a management subnet in Level 4**
- C. On a management subnet in Level 2
- D. On the same subnet in Level 3

Answer: B

Explanation:

According to the Purdue model and best practices outlined in GICSP, Level 4 corresponds to the enterprise or business network, often containing management and security monitoring infrastructure such as Security Information and Event Management (SIEM) systems.

Placing the SIEM on a management subnet in Level 4 (B) keeps monitoring tools separated from the operational control network (Level 3), reducing the risk that a compromised Level 3 device could affect the security infrastructure itself. It also allows the SIEM to collect logs from multiple network segments securely and apply enterprise-wide analysis.

This segregation supports defense-in-depth and aligns with GICSP's emphasis on secure network segmentation and monitoring.

NEW QUESTION # 14

Implementation of LDAP to manage and control access to your systems is an outcome of which NIST CSF core function?

- A. Detect
- B. Respond
- C. Protect
- D. Identify

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

LDAP (Lightweight Directory Access Protocol) is used to manage authentication and authorization services, controlling user access to systems and resources.

This function aligns with the Protect function (A) of the NIST Cybersecurity Framework (CSF), which focuses on access control, identity management, and protective technology to safeguard systems.

Identify (B) relates to asset management and risk assessment.

Respond (C) deals with incident response.

Detect (D) relates to discovering cybersecurity events.

GICSP maps LDAP implementation as a key protective control to ensure authorized access in ICS environments.

NEW QUESTION # 15

What can be configured on the router so that it can most effectively implement and enforce zones for the shown subnets?

- A. Secure Shell
- B. 802.1x protocol
- C. Access control lists
- D. MAC-based port security

Answer: C

Explanation:

The diagram shows multiple subnets/zones (Levels 0-3) connected via routers and switches. To enforce traffic flow policies between these zones/subnets, the router should implement Access Control Lists (ACLs) (B).

ACLs can:

Filter traffic between subnets based on IP addresses, ports, and protocols Enforce security boundaries as per ICS segmentation principles (A) MAC-based port security controls device-level access but is less effective for inter-subnet traffic control.

(C) Secure Shell (SSH) is for secure device management, not traffic control.

(D) 802.1x provides port-based network access control but is less relevant for routing traffic between subnets.

GICSP highlights ACLs as fundamental tools for network segmentation enforcement in ICS.

NEW QUESTION # 16

Martin is writing a document that describes in general terms how to secure embedded operating systems. The document includes issues that are specific to embedded devices vs desktop and laptop operating systems.

However, it does not call out specific flavors and versions of embedded operating systems. Which type of document is Martin writing?

- A. Procedure
- B. Policy
- C. Guideline
- D. Standard

Answer: C

Explanation:

A Guideline (A) provides general recommendations and best practices without mandatory requirements or detailed instructions.

Procedures (B) are step-by-step instructions for specific tasks.

Standards (C) specify mandatory requirements, often with measurable criteria.

Policies (D) establish high-level organizational directives and rules.

Martin's document provides general, non-mandatory advice applicable broadly, fitting the definition of a guideline.

NEW QUESTION # 17

Which of the following is a facilitated tabletop exercise that is run in odd years and provides an overall public Lessons Learned report each year it is run?

- A. CRPA
- B. CTEP
- C. GridEx
- D. E-ISAC

Answer: C

Explanation:

GridEx (C) is a major, biennial cybersecurity exercise coordinated by the North American Electric Reliability Corporation (NERC) and other stakeholders. It typically occurs in odd years and involves multiple entities from across the grid, simulating large-scale cyber and physical attacks.

GridEx exercises culminate in a public Lessons Learned report to improve preparedness.

CRPA (A) and CTEP (D) are different programs/exercises, and E-ISAC (B) is the Electricity Information Sharing and Analysis Center, not an exercise.

GICSP recognizes GridEx as a critical event for testing incident response capabilities in ICS sectors.
