Free PDF 2025 Reliable GitHub GitHub-Actions Exam Preparation

The GitHub GitHub-Actions Dumps PDF File material is printable, enabling your off-screen study. This format is portable and easily usable on smart devices including laptops, tablets, and smartphones. GitHub GitHub-Actions dumps team of professionals keeps an eye on content of the GitHub GitHub-Actions Exam and updates its product accordingly. Our pdf is a very handy format for casual and quick preparation of the GitHub certification exam.

GitHub GitHub-Actions Exam Syllabus Topics:

Topic	Details

Topic 1	Build continuous integration (CI) workflows by using GitHub Actions: This section of the exam measures the skills of Software Engineers and covers essential features for building robust CI workflows. It emphasizes building and testing projects, debugging failed tests, and customizing workflows. A skill to be measured is troubleshooting CI pipelines using GitHub Actions logs.
Topic 2	Automate development tasks by using GitHub Actions: This section of the exam measures the skills of DevOps Engineers and covers the fundamentals of GitHub Actions. It focuses on understanding action types, planning automation workflows, and creating container actions. One skill to be measured is creating workflows triggered by repository events.
Topic 3	Leverage GitHub Actions to publish to GitHub Packages: This section of the exam measures the skills of Software Engineers and Package Managers and covers the use of GitHub Actions for publishing to GitHub Packages. It focuses on setting up CI workflows for package publishing and authentication. One skill to be measured is configuring workflows to publish to package registries.
Topic 4	Build and deploy applications to Azure by using GitHub Actions: This section of the exam covers deploying applications to Azure using GitHub Actions. It focuses on continuous delivery workflows, environment protections, and Azure resource management.

GitHub Actions Certificate Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

As a developer, you want to run a workflow from the Actions tab in GitHub. Which YAML snippet should you use to match the interface in this image?

The screenshot shows the GitHub Actions interface for running a workflow. It includes a 'Use workflow from' section with a 'Branch: main' dropdown. Below that is a 'Test suite' section with a dropdown menu currently showing 'functional'. At the bottom is a green 'Run workflow' button.

```
on:
  workflow_run:
    inputs:
      test_suite:
        description: Test suite
        type: string
        options:
          - functional
          - regression
```

• A.

```
on:
  workflow_dispatch:
    inputs:
      test_suite:
        description: Test suite
        type: choice
        options:
          - functional
          - regression
```

• B.

- ```

on:
 workflow_run:
 inputs:
 test_suite:
 description: Test suite
 type: choice
 options:
 - functional
 - regression

```
- C.
- ```

on:
  workflow_dispatch:
    inputs:
      test_suite:
        description: Test suite
        type: choice
        value: functional
        options:
          - regression

```
- D.

Answer: D

Explanation:

The first image shows a workflow trigger with an option for the test suite, and the chosen YAML configuration matches this interface. Specifically, the test suite input is defined with `type: choice` and includes the option `value: functional`, which aligns with the visible UI elements in the first image.

NEW QUESTION # 14

Which of the following statements are true regarding the use of GitHub Actions on a GitHub Enterprise Server instance? (Choose three.)

- A. Third party actions can be manually synchronized for use on GitHub Enterprise Server
- B. Actions created by GitHub are automatically available and cannot be disabled
- C. Use of GitHub Actions on GitHub Enterprise Server requires a persistent internet connection
- D. Most GitHub authored actions are automatically bundled for use on GitHub Enterprise Server
- E. Third party actions can be used on GitHub Enterprise Server by configuring GitHub Connect
- F. Actions must be defined in the `.github` repository

Answer: A,C,E

Explanation:

GitHub Actions on GitHub Enterprise Server often requires an internet connection, especially for accessing actions from the GitHub Marketplace or third-party actions unless they are manually synced to the server.

To use third-party actions on GitHub Enterprise Server, GitHub Connect can be used to establish a connection between the server and GitHub.com, enabling access to third-party actions.

Third-party actions can also be manually synchronized to the GitHub Enterprise Server, making them available for use in workflows.

NEW QUESTION # 15

Which choices represent best practices for publishing actions so that they can be consumed reliably? (Choose two.)

- A. default branch
- B. tag
- C. organization name
- D. commit SHA

- E. repo name

Answer: B,D

Explanation:

Using a tag is a best practice because tags are immutable and represent a fixed version of your action. By referencing tags, consumers of your action can be assured they are using a stable and specific version of the action, which helps in avoiding issues with breaking changes.

The commit SHA is another reliable way to specify a particular version of an action. By referencing a specific commit SHA, consumers can ensure they are using exactly the code that was written at that moment, avoiding the potential for changes in the future.

NEW QUESTION # 16

Which default GitHub environment variable indicates the owner and repository name?

- A. GITHUB WORKFLOW REPO
- B. GITHUB REPOSITORY
- C. REPOSITORY NAME
- D. ENV REPOSITORY

Answer: C

Explanation:

The GITHUB_REPOSITORY environment variable contains the owner and repository name in the format owner/repository. It is automatically provided by GitHub Actions and can be used to reference the repository in workflows.

NEW QUESTION # 17

Where should workflow files be stored to be triggered by events in a repository?

- A. .github/actions/
- B. .github/workflows/
- C. Nowhere; they must be attached to an act on in the GitHub user interface
- D. .workflows/
- E. anywhere

Answer: B

Explanation:

Workflow files must be stored in the .github/workflows/ directory of the repository. This is the standard location for GitHub Actions workflow files, and workflows in this directory are automatically triggered by events defined in the file, such as pushes, pull requests, or other GitHub events.

NEW QUESTION # 18

.....

We are dedicated to helping you pass the next certificate exam fast. GitHub-Actions Exam Braindumps contains questions and answers, and they will be enough for you to deal with your exam. GitHub-Actions exam dumps have most of knowledge points of the exam. In the process of practicing, you can also improve your ability. Furthermore, we provide you with free demo for you to have a try before purchasing, so that you can have a better understanding of what you are going to buying. If you indeed have questions, just contact our online service stuff.
