GitHub GitHub-Advanced-Security Valid Cram Materials & Latest GitHub-Advanced-Security Test Pdf

If you do not have access to internet most of the time, if you need to go somewhere is in an offline state, but you want to learn for your GitHub-Advanced-Security exam. Don not worry, our products will help you solve your problem. We deeply believe that our latest GitHub-Advanced-Security exam torrent will be very useful for you to strength your ability, pass your exam and get your

certification. Our GitHub-Advanced-Security Study Materials with high quality and high pass rate in order to help you get out of your harassment. So, act now! Use our GitHub-Advanced-Security quiz prep.

GitHub Advanced Security GHAS Exam Sample Questions (Q69-Q74):

NEW QUESTION # 69

Assuming that no custom Dependabot behavior is configured, who has the ability to merge a pull request created via Dependabot security updates?

- A. A user who has read access to the repository
- B. An enterprise administrator
- C. A repository member of an enterprise organization
- D. A user who has write access to the repository

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

By default, users with write access to a repository have the ability to merge pull requests, including those created by Dependabot for security updates. This access level allows contributors to manage and integrate changes, ensuring that vulnerabilities are addressed promptly.

Users with only read access cannot merge pull requests, and enterprise administrators do not automatically have merge rights unless they have write or higher permissions on the specific repository.

NEW QUESTION # 70

What role is required to change a repository's code scanning severity threshold that fails a pull request status check?

- A. Maintain
- B. Admin
- C. Triage
- D. Write

Answer: B

Explanation:

To change the threshold that defines whether a pull request fails due to code scanning alerts (such as blocking merges based on severity), the user must have Admin access on the repository. This is because modifying these settings falls under repository configuration privileges.

Users with Write, Maintain, or Triage roles do not have the required access to modify rulesets or status check policies.

NEW QUESTION # 71

If notification and alert recipients are not customized, which users receive notifications about new Dependabot alerts in an affected repository?

- A. Users with Maintain privileges to the repository
- B. Users with Read permissions to the repository
- C. Users with Write permissions to the repository
- D. Users with Admin privileges to the repository

Answer: C

Explanation:

By default, users with Write, Maintain, or Admin permissions will receive notifications for new Dependabot alerts. However, Write permission is the minimum level needed to be automatically notified.

Users with only Read access do not receive alerts unless added explicitly.

NEW QUESTION # 72

A secret scanning alert should be closed as "used in tests" when a secret is:

- A. In the readme.md file.
- B. In a test file.
- **C. Solely used for tests.**
- D. Not a secret in the production environment.

Answer: C

Explanation:

If a secret is intentionally used in a test environment and poses no real-world security risk, you may close the alert with the reason "used in tests". This helps reduce noise and clarify that the alert was reviewed and accepted as non-critical.

Just being in a test file isn't enough unless its purpose is purely for testing.

NEW QUESTION # 73

What do you need to do before you can define a custom pattern for a repository?

- A. Provide match requirements for the secret format. Stack Overflow
- B. Add a secret scanning custom pattern.
- C. Provide a regular expression for the format of your secret pattern.
- **D. Enable secret scanning on the repository.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

Before defining a custom pattern for secret scanning in a repository, you must enable secret scanning for that repository. Secret scanning must be active to utilize custom patterns, which allow you to define specific formats (using regular expressions) for secrets unique to your organization.

Once secret scanning is enabled, you can add custom patterns to detect and prevent the exposure of sensitive information tailored to your needs.

NEW QUESTION # 74

.....

One of the main unique qualities of PrepAwayTest GitHub Advanced Security GHAS Exam Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) PDF dumps and Web-based software without installation. GitHub GitHub-Advanced-Security PDF Questions work on all the devices like smartphones, Macs, tablets, Windows, etc. We know that it is hard to stay and study for the GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam dumps in one place for a long time.
