GitHub Advanced Security GHAS Exam Training Material - GitHub-

Advanced-Security Updated Torrent & GitHub Advanced Security GHAS Exam Reliable Practice

Our product backend port system is powerful, so it can be implemented even when a lot of people browse our website can still let users quickly choose the most suitable for his GitHub-Advanced-Security qualification question, and quickly completed payment. Once the user finds the GitHub-Advanced-Security learning material that best suits them, only one click to add the GitHub-Advanced-Security Study Tool to their shopping cart, and then go to the payment page to complete the payment, our staff will quickly process user orders online. In general, users can only wait about 5-10 minutes to receive our GitHub-Advanced-Security learning material,

GitHub Advanced Security GHAS Exam Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which of the following statements most accurately describes push protection for secret scanning custom patterns?

- A. Push protection is not available for custom patterns.
- B. Push protection must be enabled for all, or none, of a repository's custom patterns.
- C. Push protection is enabled by default for new custom patterns.
- **D. Push protection is an opt-in experience for each custom pattern.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

Push protection for secret scanning custom patterns is an opt-in feature. This means that for each custom pattern defined in a repository, maintainers can choose to enable or disable push protection individually. This provides flexibility, allowing teams to enforce push protection on sensitive patterns while leaving it disabled for others.

NEW QUESTION # 73

When configuring code scanning with CodeQL, what are your options for specifying additional queries? (Each answer presents part of the solution. Choose two.)

- **A. Packs**
- **B. Queries**
- C. github/codeql
- D. Scope

Answer: A,B

Explanation:

You can customize CodeQL scanning by including additional query packs or by specifying individual queries:

* Packs: These are reusable collections of CodeQL queries bundled into a single package.

* Queries: You can point to specific files or directories containing .ql queries to include in the analysis.

github/codeql refers to a pack by name but is not a method or field. Scope is not a valid field used for configuration in this context.

NEW QUESTION # 74

Which of the following Watch settings could you use to get Dependabot alert notifications? (Each answer presents part of the solution. Choose two.)

- A. The Ignore setting
- B. The Participating and @mentions setting
- **C. The All Activity setting**
- **D. The Custom setting**

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation:

To receive Dependabot alert notifications for a repository, you can utilize the following Watch settings:

Custom setting: Allows you to tailor your notifications, enabling you to subscribe specifically to security alerts, including those from Dependabot.

All Activity setting: Subscribes you to all notifications for the repository, encompassing issues, pull requests, and security alerts like those from Dependabot.

The Participating and @mentions setting limits notifications to conversations you're directly involved in or mentioned, which may not include security alerts. The Ignore setting unsubscribes you from all notifications, including critical security alerts.

NEW QUESTION # 75

Which of the following is the best way to prevent developers from adding secrets to the repository?

- A. Create a CODEOWNERS file
- **B. Enable push protection**
- C. Configure a security manager
- D. Make the repository public

Answer: B

Explanation:

The best proactive control is push protection. It scans for secrets during a git push and blocks the commit before it enters the repository.

Other options (like CODEOWNERS or security managers) help with oversight but do not prevent secret leaks.

Making a repo public would increase the risk, not reduce it.

NEW QUESTION # 76

What step is required to run a SARIF-compatible (Static Analysis Results Interchange Format) tool on GitHub Actions?

- A. By default, the CodeQL runner automatically uploads results to GitHub on completion.
- **B. Update the workflow to include a final step that uploads the results.**
- C. Use the CLI to upload results to GitHub.
- D. The CodeQL action uploads the SARIF file automatically when it completes analysis.

Answer: B

Explanation:

When using a SARIF-compatible tool within GitHub Actions, it's necessary to explicitly add a step in your workflow to upload the analysis results. This is typically done using the upload-sarif action, which takes the SARIF file generated by your tool and uploads it to GitHub for processing and display in the Security tab.

Without this step, the results won't be available in GitHub's code scanning interface.

NEW QUESTION # 77

.....

According to the statistics shown in the feedback chart, the general pass rate for latest GitHub-Advanced-Security test prep is 98%, which is far beyond that of others in this field. In recent years, our GitHub-Advanced-Security exam guide has been well received and have reached 99% pass rate with all our dedication. As one of the most authoritative question bank in the world, our study materials make assurance for your passing the GitHub-Advanced-Security Exam.
