Salesforce Certified Advanced Administrator Sample Questions (Q91-Q96):

NEW QUESTION # 91

Cloud Kicks is looking for a way to back up its data daily.
What should the administrator recommend?

- A. Schedule a report and have the data emailed to the admin to put in the target destination.
- **B. Set up Salesforce's Data Export Service and store the data in the target destination.**
- C. Use an ETL tool that can be scheduled to extract the data and push it to the target destination.
- D. Extract the data with the Import Wizard and push it to the target destination.

Answer: B

Explanation:

Salesforce's Data Export Service is a tool that allows you to export your organization's data to a set of comma-separated values (CSV) files and store them in a backup location of your choice. You can schedule this service to run weekly or monthly and receive an email notification when your files are ready to download.

This is one way to back up your data daily without using any external tools or services. References:

NEW QUESTION # 92

What should the administrator consider before enabling Person Accounts?

- A. Person Account and Business Accounts cannot be in the same sharing model.
- B. Person Account requires less data storage.
- C. All standard Account records can be converted to Person Account field.
- **D. Person Account cannot be disabled.**

Answer: D

Explanation:

Person Account cannot be disabled is something that the administrator should consider before enabling Person Accounts. Person Accounts are a special type of accounts that allow storing information about individual people who are not associated with an organization or business account. Once Person Accounts are enabled, they cannot be disabled or removed from the org without contacting Salesforce support.

NEW QUESTION # 93

Universal Containers would like applicants to apply for multiple positions, tracking how many applicants have applied and how many positions each individual applicant has applied for. To do this, the administrator will create a Job Application junction object between the Applicant and Position objects.

How does this action meet the requirement?

- **A. The junction object allows a many-to-many relationship and also roll-up summary fields on the parent objects.**
- B. A lookup relationship on the Applicant object with Position as the master provides roll-up summary fields without code.
- C. The junction object allows the administrator to add a workflow rule to update fields on the Position and Applicant objects.
- D. The Job Application object as a master to Position and Applicant objects will allow roll-up summary fields on the Position and Applicant objects.

Answer: A

NEW QUESTION # 94

What are three options available to the administrator to help with this issue? Choose 3 answers.

- A. Deactivate unnecessary validation rules.
- **B. Remove some of the fields displayed.**
- C. Convert all Process builders to flows.
- **D. Move some page components behind a tab.**

- E. Reduce the number of related lists displayed.

Answer: B,D,E

Explanation:

To help with this issue, the administrator can do the following options:

- * Move some page components behind a tab. This will reduce the number of components that load initially and improve performance.
- * Remove some of the fields displayed. This will reduce the amount of data that needs to be retrieved and rendered on the page.
- * Reduce the number of related lists displayed. This will also reduce the amount of data that needs to be retrieved and rendered on the page. References:

NEW QUESTION # 95

An administrator has found a free app on the AppExchange and would like to install it.

Which three items should the administrator take to consideration before installed he managed package?

Choose 3 answers

- A. Apps must be installed in production before the app can be installed in a sandbox.
- B. Custom objects and custom fields used by the app count against the org's limits.
- C. Apps may require external, third-party web services to function properly.
- D. Managed apps do not undergo a formal security review by Salesforce.
- E. Apps may require certain Salesforce editions or features to be enabled.

Answer: B,C,E

Explanation:

A managed package is a type of app that can be installed from the AppExchange. Managed packages are typically created by ISV partners or developers who want to distribute and sell applications that are upgradeable and have intellectual property protection.

Before installing a managed package, an administrator should consider the following:

- * A) Custom objects and custom fields used by the app count against the org's limits.

Managed packages may include custom objects and custom fields that are used by the app. These custom objects and custom fields count against the org's limits and may affect the performance or functionality of the org. Administrators should review the components and requirements of the app before installing it and make sure they have enough space and resources for the app.

References:

https://help.salesforce.com/s/articleView?id=sf.packaging_limits.htm&type=5

- * C) Apps may require certain Salesforce editions or features to be enabled.

Managed packages may require certain Salesforce editions or features to be enabled in order to work properly.

For example, some apps may require Lightning Experience, API access, custom permissions, or specific user licenses.

Administrators should check the app's description and documentation before installing it and make sure they meet the prerequisites for the app. References:

https://help.salesforce.com/s/articleView?id=sf.packaging_install.htm&type=5

- * D) Apps may require external, third-party web services to function properly.

Managed packages may require external, third-party web services to function properly. For example, some apps may integrate with other platforms or systems such as Google Maps, PayPal, or Twilio. Administrators should check the app's description and documentation before installing it and make sure they understand the implications and costs of using external web services.
