

Google Associate-Cloud-Engineer Questions - Latest Associate-Cloud-Engineer Dumps [2025]

DOWNLOAD the newest ValidTorrent Associate-Cloud-Engineer PDF dumps from Cloud Storage for free:
<https://drive.google.com/open?id=12Sq1zPVvs8VvO1ZDygw40Yao0lubSzbc>

Now we can say that Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam questions are real and top-notch Google Associate-Cloud-Engineer exam questions that you can expect in the upcoming Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam. In this way, you can easily pass the Google Associate-Cloud-Engineer exam with good scores. The countless Google Associate-Cloud-Engineer Exam candidates have passed their dream Google Associate-Cloud-Engineer certification exam and they all got help from real, valid, and updated Associate-Cloud-Engineer practice questions, You can also trust on ValidTorrent and start preparation with confidence.

Planning & Configuring Cloud Solutions

- Plan and configure compute resources with specific skills in choosing the relevant compute choices for a specific workload as well as utilizing preemptible virtual machines and custom machine types as relevant;
- Plan and estimate the GCP product use with Pricing Calculator;
- Plan and configure network resources, which include distinguishing load balancing alternatives, configuring the Cloud DNS, establishing resource locations within a network for its availability.
- Plan and configure data storage options with a focus on product choice and selecting storage options;

To become a Google Associate Cloud Engineer, candidates must pass the Associate-Cloud-Engineer Exam, which is an online, proctored exam that can be taken from anywhere in the world. Associate-Cloud-Engineer exam fee is \$125, and candidates can register for the exam on the Google Cloud Platform website. Google Associate Cloud Engineer Exam certification is valid for two years, after which candidates must renew their certification by passing the current version of the exam.

Associate-Cloud-Engineer Free Test Questions - Quiz 2025 Google Realistic Google Associate Cloud Engineer Exam Valid Mock Test

We will provide 24-hour online service for you on our Associate-Cloud-Engineer exam questions. If you can't decide what kind of Associate-Cloud-Engineer exam practice to choose, you shall have a chance to consult us. You can ask the questions that you want to know about our Associate-Cloud-Engineer Study Guide, we will listen to you carefully, according to your Associate-Cloud-Engineer exam, we guarantee to meet your requirements without wasting your purchasing funds.

Google Associate-Cloud-Engineer exam consists of multiple-choice questions and requires the candidate to demonstrate their proficiency in various cloud computing concepts, including cloud computing fundamentals, storage and compute resources, network fundamentals, and security and compliance. Associate-Cloud-Engineer Exam is designed to assess the candidate's ability to use Google Cloud Platform to design and deploy cloud-based solutions that meet the needs of the organization.

Google Associate Cloud Engineer Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49

You are given a project with a single virtual private cloud (VPC) and a single subnetwork in the us-central1 region. There is a Compute Engine instance hosting an application in this subnetwork. You need to deploy a new instance in the same project in the europe-west1 region. This new instance needs access to the application. You want to follow Google-recommended practices. What should you do?

- A. 1. Create a subnetwork in the same VPC, in europe-west1. 2. Create the new instance in the new subnetwork and use the first instance's private address as the endpoint.
- B. 1. Create a VPC and a subnetwork in europe-west1. 2. Expose the application with an internal load balancer. 3. Create the new instance in the new subnetwork and use the load balancer's address as the endpoint.
- C. 1. Create a subnetwork in the same VPC, in europe-west1. 2. Use Cloud VPN to connect the two subnetworks. 3. Create the new instance in the new subnetwork and use the first instance's private address as the endpoint.
- D. 1. Create a VPC and a subnetwork in europe-west1. 2. Peer the 2 VPCs. 3. Create the new instance in the new subnetwork and use the first instance's private address as the endpoint.

Answer: A

NEW QUESTION # 50

Your organization needs to grant users access to query datasets in BigQuery but prevent them from accidentally deleting the datasets. You want a solution that follows Google-recommended practices. What should you do?

- A. Add users to roles/bigquery dataEditor role only, instead of roles/bigquery dataOwner.
- B. Add users to roles/bigquery user role only, instead of roles/bigquery dataOwner.
- C. Create a custom role by removing delete permissions, and add users to that role only.
- D. Create a custom role by removing delete permissions. Add users to the group, and then add the group to the custom role.

Answer: D

Explanation:

The proper answer regarding to bigquery roles is the listed in the options, the proper role that resolve this requirement is: roles/bigquery.dataViewer

https://cloud.google.com/bigquery/docs/access-control#custom_roles

On the other hand, the question explicitly is asking to use the GCP best practices on IAM:

GCP Best Practices explain clearly these rules:

Policy management

- Set organization-level IAM policies to grant access to all projects in your organization.
- Grant roles to a Google group instead of individual users when possible. It is easier to add members to and remove members from a Google group instead of updating an IAM policy to add or remove users.
- If you need to grant multiple roles to allow a particular task, create a Google group, grant the roles to that group, and then add users to that group.

https://cloud.google.com/iam/docs/using-iam-securely#policy_management

NEW QUESTION # 51

You are using Data Studio to visualize a table from your data warehouse that is built on top of BigQuery. Data is appended to the data warehouse during the day. At night, the daily summary is recalculated by overwriting the table. You just noticed that the charts in Data Studio are broken, and you want to analyze the problem.

What should you do?

- A. Use Cloud Debugger to find out why the data was not refreshed correctly
- **B. Use the BigQuery interface to review the nightly Job and look for any errors**
- C. Review the Error Reporting page in the Cloud Console to find any errors.
- D. In Cloud Logging create a filter for your Data Studio report

Answer: B

Explanation:

Explanation

Cloud Debugger helps inspect the state of an application, at any code location, without stopping or slowing down the running app // <https://cloud.google.com/debugger/docs>

NEW QUESTION # 52

You need to manage a Cloud Spanner Instance for best query performance. Your instance in production runs in a single Google Cloud region. You need to improve performance in the shortest amount of time. You want to follow Google best practices for service configuration. What should you do?

- **A. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 45% If you exceed this threshold, add nodes to your instance.**
- B. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 45% Use database query statistics to identify queries that result in high CPU usage, and then rewrite those queries to optimize their resource usage
- C. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 65% If you exceed this threshold, add nodes to your instance
- D. Create an alert in Cloud Monitoring to alert when the percentage of high priority CPU utilization reaches 65%. Use database query statistics to identify queries that result in high CPU usage, and then rewrite those queries to optimize their resource usage.

Answer: A

NEW QUESTION # 53

You are the project owner of a GCP project and want to delegate control to colleagues to manage buckets and files in Cloud Storage. You want to follow Google-recommended practices. Which IAM roles should you grant your colleagues?

- **A. Storage Admin**
- B. Storage Object Admin
- C. Storage Object Creator
- D. Project Editor

Answer: A

Explanation:

Storage Admin (roles/storage.admin) Grants full control of buckets and objects.

When applied to an individual bucket, control applies only to the specified bucket and objects within the bucket.

firebase.projects.get

resourcemanager.projects.get

resourcemanager.projects.list

storage.buckets.*

storage.objects.*

<https://cloud.google.com/storage/docs/access-control/iam-roles>

This role grants full control of buckets and objects. When applied to an individual bucket, control applies only to the specified bucket and objects within the bucket.
