

Google Associate-Data-Practitioner Questions For Guaranteed Success [2025]

2025 Latest Actualtests4sure Associate-Data-Practitioner PDF Dumps and Associate-Data-Practitioner Exam Engine Free Share: https://drive.google.com/open?id=1nMvkML_ydtkuP_Yp-eFUR6j6VssmC_HJ

Here I would like to explain the core value of Actualtests4sure exam dumps. Actualtests4sure Practice Associate-Data-Practitioner Test dumps guarantee 100% passing rate. Actualtests4sure real questions and answers are compiled by lots of Google experts with abundant experiences. So it has very high value. The dumps not only can be used to prepare for Google certification exam, also can be used as a tool to develop your skills. In addition, if you want to know more knowledge about your exam, Actualtests4sure exam dumps can satisfy your demands.

Google Associate-Data-Practitioner Exam Syllabus Topics:

Topic	Details
Topic 1	• Data Analysis and Presentation: This domain assesses the competencies of Data Analysts in identifying data trends, patterns, and insights using BigQuery and Jupyter notebooks. Candidates will define and execute SQL queries to generate reports and analyze data for business questions. • Data Pipeline Orchestration: This section targets Data Analysts and focuses on designing and implementing simple data pipelines. Candidates will select appropriate data transformation tools based on business needs and evaluate use cases for ELT versus ETL.
Topic 2	• Data Preparation and Ingestion: This section of the exam measures the skills of Google Cloud Engineers and covers the preparation and processing of data. Candidates will differentiate between various data manipulation methodologies such as ETL, ELT, and ETLT. They will choose appropriate data transfer tools, assess data quality, and conduct data cleaning using tools like Cloud Data Fusion and BigQuery. A key skill measured is effectively assessing data quality before ingestion.
Topic 3	• Data Management: This domain measures the skills of Google Database Administrators in configuring access control and governance. Candidates will establish principles of least privilege access using Identity and Access Management (IAM) and compare methods of access control for Cloud Storage. They will also configure lifecycle management rules to manage data retention effectively. A critical skill measured is ensuring proper access control to sensitive data within Google Cloud services

Latest Google Cloud Associate Data Practitioner practice test & Associate-Data-Practitioner troytec pdf

The Google Associate-Data-Practitioner certification is on trending nowadays, and many IT aspirants are trying to get it. Success in the Associate-Data-Practitioner test helps you land well-paying jobs. Additionally, the Google Associate-Data-Practitioner certification exam is also beneficial to get promotions in your current company. But the main problem that every applicant faces while preparing for the Associate-Data-Practitioner Certification test is not finding updated Google Associate-Data-Practitioner practice questions.

Google Cloud Associate Data Practitioner Sample Questions (Q68-Q73):

NEW QUESTION # 68

You manage a large amount of data in Cloud Storage, including raw data, processed data, and backups. Your organization is subject to strict compliance regulations that mandate data immutability for specific data types. You want to use an efficient process to reduce storage costs while ensuring that your storage strategy meets retention requirements. What should you do?

- A. Create a Cloud Run function to periodically check object metadata, and move objects to the appropriate storage class based on age and access patterns. Use object holds to enforce immutability for specific objects.
- B. Move objects to different storage classes based on their age and access patterns. Use Cloud Key Management Service (Cloud KMS) to encrypt specific objects with customer-managed encryption keys (CMEK) to meet immutability requirements.
- **C. Use object holds to enforce immutability for specific objects, and configure lifecycle management rules to transition objects to appropriate storage classes based on age and access patterns.**
- D. Configure lifecycle management rules to transition objects to appropriate storage classes based on access patterns. Set up Object Versioning for all objects to meet immutability requirements.

Answer: C

Explanation:

Using object holds and lifecycle management rules is the most efficient and compliant strategy for this scenario because:

Immutability: Object holds (temporary or event-based) ensure that objects cannot be deleted or overwritten, meeting strict compliance regulations for data immutability.

Cost efficiency: Lifecycle management rules automatically transition objects to more cost-effective storage classes based on their age and access patterns.

Compliance and automation: This approach ensures compliance with retention requirements while reducing manual effort, leveraging built-in Cloud Storage features.

NEW QUESTION # 69

You work for a retail company that collects customer data from various sources:

* Online transactions: Stored in a MySQL database

* Customer feedback: Stored as text files on a company server

* Social media activity: Streamed in real-time from social media platforms You need to design a data pipeline to extract and load the data into the appropriate Google Cloud storage system(s) for further analysis and ML model training. What should you do?

- A. Copy the online transactions data into Cloud SQL for MySQL. Import the customer feedback into BigQuery. Stream the social media activity into Cloud Storage.
- B. Extract and load the online transactions data into Bigtable. Import the customer feedback data into Cloud Storage. Store the social media activity in Cloud SQL for MySQL.
- C. Extract and load the online transactions data, customer feedback data, and social media activity into Cloud Storage.
- **D. Extract and load the online transactions data into BigQuery. Load the customer feedback data into Cloud Storage. Stream the social media activity by using Pub/Sub and Dataflow, and store the data in BigQuery.**

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The pipeline must extract diverse data types and load them into systems optimized for analysis and ML. Let's assess:

* Option A: Cloud SQL for transactions keeps data relational but isn't ideal for analysis/ML (less scalable than BigQuery).

BigQuery for feedback is fine but skips staging. Cloud Storage for streaming social media loses real-time context and requires extra

steps for analysis.

* Option B: BigQuery for transactions (via export from MySQL) supports analysis/ML with SQL. Cloud Storage stages feedback text files for preprocessing, then BigQuery ingestion. Pub/Sub and Dataflow stream social media into BigQuery, enabling real-time analysis-optimal for all sources.

* Option C: Cloud Storage for all data is a staging step, not a final solution for analysis/ML, requiring additional pipelines.

NEW QUESTION # 70

Your retail organization stores sensitive application usage data in Cloud Storage. You need to encrypt the data without the operational overhead of managing encryption keys. What should you do?

- A. Use customer-managed encryption keys (CMEK).
- B. Use customer-supplied encryption keys (CSEK).
- C. Use customer-supplied encryption keys (CSEK) for the sensitive data and customer-managed encryption keys (CMEK) for the less sensitive data.
- D. Use Google-managed encryption keys (GMEK).

Answer: D

Explanation:

Using Google-managed encryption keys (GMEK) is the best choice when you want to encrypt sensitive data in Cloud Storage without the operational overhead of managing encryption keys. GMEK is the default encryption mechanism in Google Cloud, and it ensures that data is automatically encrypted at rest with no additional setup or maintenance required. It provides strong security while eliminating the need for manual key management.

NEW QUESTION # 71

You need to create a new data pipeline. You want a serverless solution that meets the following requirements:

* Data is streamed from Pub/Sub and is processed in real-time.

* Data is transformed before being stored.

* Data is stored in a location that will allow it to be analyzed with SQL using Looker.

Which Google Cloud services should you recommend for the pipeline?

- A. 1. BigQuery
2. Analytics Hub
- B. 1. Dataflow
2. BigQuery
- C. 1. Dataproc Serverless
2. Bigtable
- D. 1. Cloud Composer
2. Cloud SQL for MySQL

Answer: B

Explanation:

To build a serverless data pipeline that processes data in real-time from Pub/Sub, transforms it, and stores it for SQL-based analysis using Looker, the best solution is to use Dataflow and BigQuery. Dataflow is a fully managed service for real-time data processing and transformation, while BigQuery is a serverless data warehouse that supports SQL-based querying and integrates seamlessly with Looker for data analysis and visualization. This combination meets the requirements for real-time streaming, transformation, and efficient storage for analytical queries.

NEW QUESTION # 72

Your organization consists of two hundred employees on five different teams. The leadership team is concerned that any employee can move or delete all Looker dashboards saved in the Shared folder. You need to create an easy-to-manage solution that allows the five different teams in your organization to view content in the Shared folder, but only be able to move or delete their team-specific dashboard. What should you do?

- A. 1. Change the access level of the Shared folder to View for the All Users group. 2. Create five subfolders inside the Shared folder. Grant each team member the Manage Access, Edit access level to their corresponding subfolder.

- B. 1. Move all team-specific content into the dashboard owner's personal folder. 2. Change the access level of the Shared folder to View for the All Users group. 3. Instruct each user to create content for their team in the user's personal folder.
- C. 1. Create Looker groups representing each of the five different teams, and add users to their corresponding group. 2. Create five subfolders inside the Shared folder. Grant each group the View access level to their corresponding subfolder.
- D. 1. Change the access level of the Shared folder to View for the All Users group. 2. Create Looker groups representing each of the five different teams, and add users to their corresponding group. 3. Create five subfolders inside the Shared folder. Grant each group the Manage Access, Edit access level to their corresponding subfolder.

Answer: D

Explanation:

Comprehensive and Detailed in Depth Explanation:

Why C is correct: Setting the Shared folder to "View" ensures everyone can see the content.

Creating Looker groups simplifies access management.

Subfolders allow granular permissions for each team.

Granting "Manage Access, Edit" allows teams to modify only their own content.

Why other options are incorrect: A: Grants View access only, so teams can't edit.

B: Moving content to personal folders defeats the purpose of sharing.

D: Grants edit access to all members of the team, not the team as a whole, which is not ideal.

NEW QUESTION # 73

.....

It is our aspiration to help candidates get certification in their first try with our latest Associate-Data-Practitioner exam prep and valid pass guide. We know the difficulty of Associate-Data-Practitioner real exam so our IT experts written the best quality exam answers for our customers who didn't get good result. By using our Associate-Data-Practitioner pass review, you will grasp the overall key points of the test content and solve the difficult questions easier.
