Google Professional-Cloud-Architect Reliable Study Questions, Test Professional-Cloud-Architect Cram Pdf

We are concentrating on the reform on the Professional-Cloud-Architect exam material that our candidates try to get aid with. We own the profession experts on compiling the Professional-Cloud-Architect practice questions and customer service on giving guide on questions from our clients. Our Professional-Cloud-Architect Preparation materials contain three versions: the PDF, the Software and the APP online. They give you different experience on trying out according to your interests and hobbies. And they can assure your success by precise information.

Google Professional-Cloud-Architect certification exam is designed for professionals who want to validate their skills and knowledge in designing and managing cloud solutions on Google Cloud Platform (GCP). Google Certified Professional - Cloud Architect (GCP) certification is ideal for cloud architects, developers, and engineers who want to demonstrate their expertise in cloud architecture and design principles. Professional-Cloud-Architect Exam is intended to assess the candidate's ability to design, develop, and manage secure, scalable, and highly available cloud solutions using GCP services.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q238-Q243):

NEW QUESTION # 238

You are developing a globally scaled frontend for a legacy streaming backend data API. This API expects events in strict chronological order with no repeat data for proper processing.

Which products should you deploy to ensure guaranteed-once FIFO (first-in, first-out) delivery of data?

- A. Cloud Pub/Sub alone
- **B. Cloud Pub/Sub to Cloud SQL**
- C. Cloud Pub/Sub to Stackdriver
- D. Cloud Pub/Sub to Cloud DataFlow

Answer: B

Explanation:

NEW QUESTION # 239

One of the developers on your team deployed their application in Google Container Engine with the Dockerfile below. They report that their application deployments are taking too long.

```
FROM ubuntu:16.04
COPY . /src
RUN apt-get update && apt-get install -y python python-pip
RUN pip install -r requirements.txt
```

You want to optimize this Dockerfile for faster deployment times without adversely affecting the app's functionality.

Which two actions should you take? Choose 2 answers.

- A. Use larger machine types for your Google Container Engine node pools.
- B. Remove dependencies from requirements.txt.
- **C. Copy the source after the package dependencies (Python and pip) are installed.**
- **D. Use a slimmed-down base image like Alpine linux.**
- E. Remove Python after running pip.

Answer: C,D

Explanation:

Explanation

The speed of deployment can be changed by limiting the size of the uploaded app, limiting the complexity of the build necessary in the Dockerfile, if present, and by ensuring a fast and reliable internet connection.

Note: Alpine Linux is built around musl libc and busybox. This makes it smaller and more resource efficient than traditional GNU/Linux distributions. A container requires no more than 8 MB and a minimal installation to disk requires around 130 MB of storage. Not only do you get a fully-fledged Linux environment but a large selection of packages from the repository.

NEW QUESTION # 240

For this question, refer to the Mountkirk Games case study.

Mountkirk Games wants to set up a continuous delivery pipeline. Their architecture includes many small services that they want to be able to update and roll back quickly.

Mountkirk Games has the following requirements:

- * Services are deployed redundantly across multiple regions in the US and Europe.
- * Only frontend services are exposed on the public internet.
- * They can provide a single frontend IP for their fleet of services.
- * Deployment artifacts are immutable.

Which set of products should they use?

- **A. Google Container Registry, Google Container Engine, Google HTTP(s) Load Balancer**
- B. Google Cloud Storage, Google Cloud Dataflow, Google Compute Engine
- C. Google Cloud Functions, Google Cloud Pub/Sub, Google Cloud Deployment Manager
- D. Google Cloud Storage, Google App Engine, Google Network Load Balancer

Answer: A

NEW QUESTION # 241

For this question, refer to the JencoMart case study.

JencoMart has built a version of their application on Google Cloud Platform that serves traffic to Asia. You want to measure success against their business and technical goals.

Which metrics should you track?

- A. Total visits, error rates, and latency from Asia
- **B. Total visits and average latency for users in Asia**
- C. Error rates for requests from Asia
- D. The number of character sets present in the database
- E. Latency difference between US and Asia

Answer: B

NEW QUESTION # 242

Your company creates rendering software which users can download from the company website.

Your company has customers all over the world. You want to minimize latency for all your customers. You want to follow Google-recommended practices.

How should you store the files?

- **A. Save the files in multiple Multi-Regional Cloud Storage buckets, one bucket per multi-region.**
- B. Save the files in multiple Regional Cloud Storage buckets, one bucket per zone per region.
- C. Save the files in a Multi-Regional Cloud Storage bucket.
- D. Save the files in a Regional Cloud Storage bucket, one bucket per zone of the region.

Answer: A

NEW QUESTION # 243
