PDFTorrent Google ChromeOS-Administrator exam training materials can help you to pass the exam. Any restrictions start from your own heart, if you want to pass the Google ChromeOS-Administrator examination, you will choose

the PDFTorrent.

Google Professional ChromeOS Administrator Exam Sample Questions (Q92-Q97):

NEW QUESTION # 92

Which email address should an admin use when setting up an online trial of ChromeOS?

- A. Personal email address
- B. Google email address
- **C. Organization email address**
- D. Temporary email address

Answer: C

Explanation:

When setting up an online trial for ChromeOS or related Google services, it is essential to use an organization email address. This ensures that the trial is associated with the correct domain and is managed centrally.

Using personal or temporary addresses can result in configuration issues or lack of proper administrative control.

Verified Answer from Official Source:

The correct answer is verified from the Google Chrome Enterprise Setup Guide, which advises using an official organizational email when registering for trials.

"To begin a ChromeOS trial, sign up using your organization's email address to ensure the trial is associated with your business domain." Using an organization email address ensures the trial setup aligns with enterprise management and integrates correctly with existing Google Workspace configurations.

Objectives:

- * Properly initiate ChromeOS trials for enterprise use.
- * Maintain organizational control over trial configurations.

NEW QUESTION # 93

You are tasked with converting hundreds of Windows & Mac machines across multiple locations to ChromeOS Flex and enrolling them into the Admin console. The available network bandwidth is limited at many of the locations and the devices are not currently managed with any endpoint management system.

Which two operations are required to perform the task?

Choose 2 answers

- A. Contact an authorized Zero-Touch Enrollment (ZTE) reseller and share the serial numbers of the devices you're converting and the domain you're enrolling them into to have them pre-provisioned into the Admin console
- B. Use PXE boot to load the ChromeOS Flex image onto devices and have them automatically convert across all locations after they're restarted
- **C. Distribute USB flash drives with the ChromeOS Flex image to the different locations and ask local personnel or a services partner to manually convert each device**
- D. Install the Recovery Tool extension on all devices that are to be converted and follow the step-by-step installer to convert each device directly without the need of USB drives
- **E. Create a dedicated enrollment account for each location and place them into the OUs you want the devices enrolled into then enable the 'Place ChromeOS device in user organization' policy and enroll the devices using the respective enrollment account for each location**

Answer: C,E

Explanation:

* Create Dedicated Enrollment Accounts: Create separate enrollment accounts for each location, placing them in the respective OUs where the converted devices should be enrolled.

* Enable Policy: Turn on the "Place ChromeOS device in user organization" policy. This ensures devices are automatically enrolled into the correct OU based on the enrollment account used.

* Enroll Devices: Use the dedicated enrollment account for each location to enroll the converted devices. This allows for organized management based on location.

Option E:

* Distribute USB Drives: Prepare USB flash drives with the ChromeOS Flex image and distribute them to the different locations.

* Manual Conversion: Instruct local personnel or a service partner to manually convert each device using the provided USB drives.

This method is suitable when network bandwidth is limited and doesn't rely on existing endpoint management infrastructure.

Reasons for not choosing other options:

* Option B: The Recovery Tool is primarily used for creating recovery media for ChromeOS devices, not converting other operating systems.

* Option C: PXE boot is a network-based installation method, not ideal for locations with limited bandwidth.

* Option D: While zero-touch enrollment (ZTE) streamlines enrollment, it requires pre-provisioning devices with the vendor or reseller, which might not be feasible in this scenario.

By combining options A and E, you can efficiently convert and enroll devices in multiple locations with limited network resources and no existing management systems.

NEW QUESTION # 94

Your organization has automatic ChromeOS updates implemented. Your CTO would like to review the documentation on what changes each new version has. How would you assist your CTO in accomplishing this goal?

- A. Direct your CTO to the "Chrome Release Notes Support" page
- B. Open Chrome and enter chrome://updates in the address bar
- C. Search YouTube for Chrome Update stories
- D. Have your CTO start a Google Chrome Support ticket

Answer: A

Explanation:

The best way to review detailed changes for each new ChromeOS version is to visit the Chrome Release Notes Support page. This page contains official documentation about new features, improvements, and fixes introduced with each update.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Release Notes Documentation, which serves as the primary resource for update details.

"For detailed information on ChromeOS updates, visit the Chrome Release Notes Support page, which includes information on version changes and improvements." Providing access to official release notes ensures that the CTO gets accurate and up-to-date information without relying on third-party interpretations.

Objectives:

- * Access official documentation for ChromeOS updates.
- * Keep stakeholders informed of software changes.

NEW QUESTION # 95

What are two methods for signing in to a Chrome OS device? Choose 2 answers

- A. Google Friend Connect
- B. SMS code sent to mobile phone
- C. Facebook Connect
- D. Single sign-on

Answer: C,D

Explanation:

* Single sign-on (SSO): This allows users to sign in to their Chrome OS device using their organizational credentials. This is particularly useful in enterprise or educational settings where users already have an existing account.

* Facebook Connect: This allows users to sign in to their Chrome OS device using their Facebook credentials. This can be convenient for users who are already logged into Facebook on another device.

Options A and C are incorrect:

* SMS code sent to mobile phone: This is not a standard sign-in method for Chrome OS devices.

* Google Friend Connect: This was a social networking service that has been discontinued.

NEW QUESTION # 96

You have a number of applications that you rely upon. You want to ensure that your applications continue to run smoothly with each new version of Chrome. What should you do?

- A. Ask users to provide feedback on the applications within a week of a new Chrome release
- B. Implement a QA strategy and put their IT group and 5% of users on the beta channel of ChromeOS so they can find and report bugs early for upcoming Chrome releases
- C. Always install the latest version of those applications when they become available so they are always compatible with the latest version of Chrome
- D. Advise them to take no action All applications are automatically supported on the latest version of Chrome

Answer: B

Explanation:

Option D is the most proactive and comprehensive approach to ensure application compatibility with new Chrome versions. Here's why:

* QA Strategy: Implementing a formal Quality Assurance (QA) process allows for systematic testing of applications on new Chrome versions before they are released to all users. This helps identify and address compatibility issues early on.

* Beta Channel Testing: Enrolling a subset of users (e.g., IT group and 5% of users) in the beta channel gives them access to pre-release versions of ChromeOS. This allows them to test applications in a real-world environment and report any bugs or issues before the stable release.

* Early Bug Reporting: By identifying and reporting bugs early, you provide developers with valuable feedback and time to fix issues before the official release. This ensures a smoother transition for all users when the new Chrome version is deployed.

Why other options are incorrect:

* A: User feedback is valuable, but it's reactive and may not catch all issues before they impact a larger user base.

* B: Assuming all applications are automatically compatible is risky and can lead to unexpected problems.

* C: While keeping applications updated is good practice, it doesn't guarantee compatibility with new Chrome versions, as changes in Chrome itself can cause issues.

NEW QUESTION # 97

.....

PDFTorrent provides latest ChromeOS-Administrator practice exam questions and ChromeOS-Administrator certifications training material products for all those customers who are looking to pass ChromeOS-Administrator exams. There is no doubt that the ChromeOS-Administrator exams can be tough and challenging without valid ChromeOS-Administrator brain dumps. We offer the guaranteed success with high marks in all ChromeOS-Administrator exams. Our multiple ChromeOS-Administrator certifications products let customers prepare and assess in the best way possible. We provide in-depth ChromeOS-Administrator Study Material in the form of ChromeOS-Administrator PDF dumps questions answers that will allow you to prepare yourself for the exam. ChromeOS-Administrator exams PDF question answers also come with one year free update. We also provide live support chat to all our customers who have concerns about ChromeOS-Administrator exams.
