It is common in modern society that many people who are more knowledgeable and capable than others finally lost some good opportunities for development because they didn't obtain the Professional-Cloud-Security-Engineer certification. The prerequisite for obtaining the Professional-Cloud-Security-Engineer Certification is to pass the exam, but not everyone has the ability to pass it at one time. But our Professional-Cloud-Security-Engineer exam questions will help you pass the exam by just one go for we have the pass rate high as 98% to 100%.

Google Professional-Cloud-Security-Engineer certification is an excellent way for professionals to demonstrate their expertise in cloud security engineering and to enhance their career prospects. With the increasing adoption of cloud technologies, the demand for certified cloud security professionals is only going to increase, making this certification more valuable than ever before.

To be eligible for the Professional-Cloud-Security-Engineer Certification, candidates must have a strong understanding of cloud security architecture, network security, data protection, compliance, and incident management. They should also have hands-on experience in implementing security controls and monitoring security events in the Google Cloud Platform.

Magnificent Professional-Cloud-Security-Engineer Preparation Dumps:

Google Cloud Certified - Professional Cloud Security Engineer Exam Represent the Most Popular Simulating Exam - ActualTestsIT

As far as the prices of Professional-Cloud-Security-Engineer exam dumps are concerned, we ensure you that our Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam questions prices are entirely affordable for everyone. The real and updated Professional-Cloud-Security-Engineer exam dumps are being offered at discounted prices. You can grab this opportunity and download the top-notch and real Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam questions at discounted prices. Best wishes for the final Google Professional-Cloud-Security-Engineer certification exam!!!

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q61-Q66):

NEW QUESTION # 61

Which two implied firewall rules are defined on a VPC network? (Choose two.)

- A. A rule that allows all outbound connections
- B. A rule that denies all inbound connections
- C. A rule that allows all inbound port 80 connections
- D. A rule that blocks all inbound port 25 connections
- E. A rule that blocks all outbound connections

Answer: A,B

Explanation:

Explanation

Implied IPv4 allow egress rule. An egress rule whose action is allow, destination is 0.0.0.0/0, and priority is the lowest possible (65535) lets any instance send traffic to any destination Implied IPv4 deny ingress rule. An ingress rule whose action is deny, source is 0.0.0.0/0, and priority is the lowest possible (65535) protects all instances by blocking incoming connections to them.

https://cloud.google.com/vpc/docs/firewalls?hl=en#default_firewall_rules

NEW QUESTION # 62

You have created an OS image that is hardened per your organization's security standards and is being stored in a project managed by the security team. As a Google Cloud administrator, you need to make sure all VMs in your Google Cloud organization can only use that specific OS image while minimizing operational overhead. What should you do? (Choose two.)

- A. Grant users the compute.imageUser role in their own projects.
- B. Store the image in every project that is spun up in your organization.
- C. Remove VM instance creation permission from users of the projects, and only allow you and your team to create VM instances.
- D. Set up an image access organization policy constraint, and list the security team managed project in the project's allow list.
- E. Grant users the compute.imageUser role in the OS image project.

Answer: D,E

Explanation:

Explanation

<https://cloud.google.com/resource-manager/docs/organization-policy/org-policy-constraints-constraints/compute.trustedImageProjects>

This list constraint defines the set of projects that can be used for image storage and disk instantiation for Compute Engine. If this constraint is active, only images from trusted projects will be allowed as the source for boot disks for new instances.

NEW QUESTION # 63

You are working with protected health information (PHI) for an electronic health record system. The privacy officer is concerned that sensitive data is stored in the analytics system. You are tasked with anonymizing the sensitive data in a way that is not reversible. Also, the anonymized data should not preserve the character set and length. Which Google Cloud solution should you use?

- A. Cloud Data Loss Prevention with deterministic encryption using AES-SIV

- B. Cloud Data Loss Prevention with cryptographic hashing
- C. Cloud Data Loss Prevention with format-preserving encryption
- D. Cloud Data Loss Prevention with Cloud Key Management Service wrapped cryptographic keys

Answer: B

Explanation:

Use Cloud Data Loss Prevention (DLP) with cryptographic hashing:

Cloud DLP allows you to de-identify sensitive data using several techniques, including cryptographic hashing.

Choose a suitable hashing algorithm like SHA-256 for non-reversible anonymization.

This method converts the original data into a fixed-length hash that does not preserve the original data's format or character set.

Set up a Cloud DLP job to scan your data sources, identify PHI, and apply the cryptographic hashing transformation.

Cloud DLP Overview

De-identification with Cloud DLP

NEW QUESTION # 64

You manage your organization's Security Operations Center (SOC). You currently monitor and detect network traffic anomalies in your VPCs based on network logs. However, you want to explore your environment using network payloads and headers. Which Google Cloud product should you use?

- A. Google Cloud Armor
- B. Packet Mirroring
- C. Cloud IDS
- D. VPC Service Controls logs
- E. VPC Flow Logs

Answer: B

Explanation:

Explanation

<https://cloud.google.com/vpc/docs/packet-mirroring>

Packet Mirroring clones the traffic of specified instances in your Virtual Private Cloud (VPC) network and forwards it for examination. Packet Mirroring captures all traffic and packet data, including payloads and headers.

NEW QUESTION # 65

Your team needs to prevent users from creating projects in the organization. Only the DevOps team should be allowed to create projects on behalf of the requester.

Which two tasks should your team perform to handle this request? (Choose two.)

- A. Add a designated group of users to the Project Creator role at the organizational level.
- B. Create an Organization Policy constraint, and apply it at the organizational level.
- C. Grant the billing account creator role to the designated DevOps team.
- D. Grant the Project Editor role at the organizational level to a designated group of users.
- E. Remove all users from the Project Creator role at the organizational level.

Answer: A,B

NEW QUESTION # 66

.....

ActualTestsIT Google Professional-Cloud-Security-Engineer dumps contain required materials for the candidates. Once you purchase our products, all problems will be readily solved. You can try to use our free demo and download pdf real questions and answers before you make a decision. These exam simulations will help you to understand our products. Widespread scope and regularly update are the outstanding characteristic of ActualTestsIT Google Professional-Cloud-Security-Engineer braindump. By choosing it, all IT certifications are ok.
