Google Google-Workspace-Administrator Latest Braindumps Pdf & Accurate Google-Workspace-Administrator Answers

The DumpsValid is committed to making the Google Cloud Certified - Professional Google Workspace Administrator Google-Workspace-Administrator exam questions the first preference of Google-Workspace-Administrator exam candidates. To achieve this objective the DumpsValid offers the real and updated Google-Workspace-Administrator dumps in three easy-to-use and compatible formats. These formats are Google Cloud Certified - Professional Google Workspace Administrator Google-Workspace-Administrator PDF dumps files, desktop practice test software, and web-based practice test software. All these three Google-Workspace-Administrator Practice Questions type are easy to install and smoothly work with all devices, operating systems, and browsers. So you rest assured that with all Google-Workspace-Administrator exam practice test questions you will get everything that you need to learn, prepare and pass the valuable Google-Workspace-Administrator certification with good scores.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q42-Q47):

NEW QUESTION # 42

All Human Resources employees at your company are members of the "HR Department" Team Drive. The HR Director wants to enact a new policy to restrict access to the "Employee Compensation" subfolder stored on that Team Drive to a small subset of the team.

What should you do?

- A. Use the Drive API to modify the permissions of the individual files contained within the subfolder.
- **B. Move the contents of the subfolder to a new Team Drive with only the relevant team members.**
- C. Move the subfolder to the HR Director's MyDrive and share it with the relevant team members.
- D. Use the Drive API to modify the permissions of the Employee Compensation subfolder.

Answer: B

Explanation:

"Inherited permissions can't be removed from a file or folder in a shared drive". ref:
<https://developers.google.com/drive/api/v3/manage-sharing>

NEW QUESTION # 43

You are managing the buildings and resources for your organization. You need to create several conference rooms with a capacity of 10 people each, equipped with a whiteboard and projector, and wheelchair accessible. You want to ensure the process is efficient.

What should you do?

- **A. Create a CSV file and add all resources. Write a script using the Workspace API to reference the CSV file and create all the resources.**
- B. Automate room creation by using a third-party app from the Google Workspace Marketplace.
- C. Create each conference room individually in the Google Admin console. Add the features for each room.
- D. Use the Google Admin console to bulk upload the rooms. Create a resource with the specified features and apply the features to that resource.

Answer: A

Explanation:

Using a CSV file to list all the conference rooms and a script to automate their creation via the Workspace API is the most efficient solution. This approach allows you to batch-create the rooms with the specified attributes (capacity, whiteboard, projector, wheelchair accessible) without manually inputting each room individually. It minimizes manual effort and ensures consistency across all room configurations.

NEW QUESTION # 44

The application development team has come to you requesting that a new, internal, domain-owned Google Workspace app be allowed to access Google Drive APIs. You are currently restricting access to all APIs using approved whitelists, per security policy. You need to grant access for this app. What should you do?

- A. Enable all API access for Google Drive.
- B. Enable "trust domain owned apps" setting.
- C. Whitelist the app in the Google Workspace Marketplace.
- D. Add OAuth Client ID to Google Drive Trusted List.

Answer: D

Explanation:

- * Navigate to the Google Admin console at admin.google.com.
- * From the Admin console Home page, go to "Security" and then to "API controls."
- * In the "API controls" section, click on "Manage Third-Party App Access."
- * Here, you can add the OAuth Client ID of your internal app to the trusted list. This ensures that only apps you have vetted and approved can access Google Drive APIs, complying with your security policy.
- * Enter the OAuth Client ID of the new app and save the changes.

This process ensures that the new, internal, domain-owned app can access Google Drive APIs without compromising the security policies in place.

NEW QUESTION # 45

A disgruntled employee has left your company and deleted all their email messages and files in Google Drive. The security team is aware that some intellectual property may have surfaced on a public social media site. What is the first step to start an investigation into this leak?

- A. Delete the user's account in the Admin Console.
- B. Transfer data between end user Workspace accounts.
- C. Use Google Vault to export all the user data and share among the security team.
- D. Instruct a Google Vault admin to create a matter, and place all the user data on 'hold.'

Answer: D

Explanation:

Access Google Vault: The Vault admin should log in to Google Vault.

Create a New Matter: In Google Vault, create a new matter specifically for this investigation related to the disgruntled employee.

Place Data on Hold: Place all the user's email and Drive data on hold to ensure it is preserved. This prevents the data from being permanently deleted or altered.

Search for Data: Use Google Vault's search functionality to locate relevant emails and documents that may pertain to the leak.

Export Data if Needed: If necessary, export the preserved data for further analysis and review by the security team.

Collaborate with Security Team: Share the findings with the security team to aid in their investigation of the data leak.

NEW QUESTION # 46

You are configuring data governance policies for your organization's Google Drive. You need to ensure that employees in the Research and Development department can share files with external users, while employees in the Finance department are blocked from sharing any files externally. What should you do?

- A. Create a separate Google Workspace domain for the Finance organizational unit (OU) and disable external sharing for that domain.
- B. Apply an organization-wide data loss prevention (DLP) rule that scans for sensitive information and prevents external

sharing of those files. Apply that rule to the Finance organizational unit (OU).

- C. Create a Drive trust rule that allows external sharing for the Research and Development organizational unit (OU) and another rule that blocks external sharing for the Finance OU.
- D. Enable Vault for the Finance organizational unit (OU) to ensure that all files shared externally are retained and auditable.

Answer: C

Explanation:

To enforce different external sharing policies for different departments within the same Google Workspace domain, you should use Google Drive sharing policies configured at the organizational unit (OU) level. Drive trust rules are the mechanism within Google Workspace to control how users can share files inside and outside the organization.

Here's why option A is correct and why the others are not the most appropriate solutions:

A . Create a Drive trust rule that allows external sharing for the Research and Development organizational unit (OU) and another rule that blocks external sharing for the Finance OU.

Google Workspace allows administrators to set specific Drive sharing settings for different organizational units. By creating a Drive trust rule (or more accurately, configuring the external sharing options within Drive and Docs settings for each OU), you can enable external sharing for the Research and Development OU while simultaneously restricting or completely blocking external sharing for the Finance OU. This granular control at the OU level directly addresses the requirement of having different policies for the two departments.

Associate Google Workspace Administrator topics guides or documents reference: The official Google Workspace Admin Help documentation on "Control how users can share Drive files externally" (or similar titles) explains how to manage external sharing options at the organizational unit level. This includes: Setting sharing options by organizational unit: The documentation details how to navigate to Apps > Google Workspace > Drive and Docs > Sharing settings in the Admin console and then select a specific organizational unit to customize its sharing permissions.

Controlling sharing outside your organization: This section explains the various settings available, including allowing sharing with anyone, only with specific domains, or completely preventing external sharing.

While the term "Drive trust rule" might be used in more advanced contexts related to trusted domains, the core functionality of controlling external sharing based on OUs is the key here. The settings within the Drive and Docs sharing configuration for each OU achieve the desired outcome.

B . Enable Vault for the Finance organizational unit (OU) to ensure that all files shared externally are retained and auditable.

Google Vault is used for eDiscovery, legal holds, and retention of data. While it can retain and audit externally shared files (if sharing is allowed), it does not prevent external sharing. Enabling Vault for the Finance OU would not block them from sharing files externally; it would only ensure that if they do, those shared files are preserved and can be audited. This does not meet the requirement of blocking external sharing for the Finance department.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on Google Vault clearly outlines its purpose and functionalities, which are focused on data retention, legal holds, and search/export for compliance and legal reasons, not on preventing sharing.

C . Apply an organization-wide data loss prevention (DLP) rule that scans for sensitive information and prevents external sharing of those files. Apply that rule to the Finance organizational unit (OU).

While DLP rules can prevent the external sharing of files containing sensitive information, they are triggered by the content of the files, not by a blanket restriction on all external sharing for a specific OU. The requirement is to block all external sharing for the Finance department, regardless of the content. Applying a DLP rule only to the Finance OU might be complex to manage for a complete block and is not the most direct way to achieve the stated goal. OU-based sharing settings are more straightforward for this purpose.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on Data Loss Prevention (DLP) explains how to create rules based on content to prevent sensitive data leaks. While DLP can control sharing, it's not the primary mechanism for completely blocking all external sharing for an entire OU.

D . Create a separate Google Workspace domain for the Finance organizational unit (OU) and disable external sharing for that domain.

Creating a separate Google Workspace domain for the Finance department is an overly complex and administratively burdensome solution. It would involve managing two separate domains, user accounts, billing, and potentially complicate internal collaboration between departments. Using organizational units within the same domain provides a much more efficient and manageable way to apply different policies.

Associate Google Workspace Administrator topics guides or documents reference: Google Workspace's organizational unit structure is specifically designed to allow administrators to apply different settings and policies to groups of users within a single domain, avoiding the need for separate domains for policy enforcement.

Therefore, the most direct and appropriate solution is to configure the Google Drive sharing settings at the organizational unit level, allowing external sharing for the Research and Development OU and blocking it for the Finance OU.
