We will progress together and become better ourselves.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q15-Q20):

NEW QUESTION # 15
A user reached out to the IT department about a Google Group that they own:
info@company.com. The group is receiving mail, and each message is also delivered directly to the user's Gmail inbox. The user wants to be able to reply to messages directly from Gmail and have them sent on behalf of the group, not their individual account. Currently, their replies come from their individual account. What would you instruct the user to do?

- A. Add the group as an email address that can be sent from within Gmail, and verify that the user has access. They can then choose to reply from the group.
- B. Set the group address to be the default sender within the group's posting policies.
- C. Add the user's individual account as a delegate to the group's inbox. They can then toggle between the accounts and use the Gmail interface on behalf of the group.
- D. Create a new content compliance rule that matches the user's outgoing messages with the group copied, and have it modify the sender to be the group address.

Answer: A

Explanation:

NEW QUESTION # 16

Today your company signed up for Google Workspace Business Starter with an existing domain name. You want to add team members and manage their access to email and other services. However, you are unable to create new user accounts or change user settings. You need to fix this problem. What should you do?

- A. Check domain ownership in the DNS settings.
- B. Wait 24 hours after signing up for the features to become active.
- C. Run the Transfer tool to bring unmanaged users to your Workspace account.
- D. Upgrade to a Google Workspace Enterprise edition.

Answer: A

Explanation:
To manage users and settings in Google Workspace, you must verify domain ownership. If the domain is not verified, you won't be able to create new user accounts or modify user settings. Checking the DNS settings and completing the domain verification process will resolve the issue and allow you to manage users and services in Google Workspace.

NEW QUESTION # 17

The CEO of your company has indicated that messages from trusted contacts are being delivered to spam, and it is significantly affecting their work. The messages from these contacts have not always been classified as spam. Additionally, you recently configured SPF, DKIM, and DMARC for your domain. You have been tasked with troubleshooting the issue.
What two actions should you take? (Choose two.)

- A. Validate that your domain is not on the Spamhaus blacklist.
- B. Obtain the message header and analyze using Google Workspace Toolbox.
- C. Set up a Gmail routing rule to whitelist the sender.
- D. Review the contents of the messages in Google Vault.
- E. Conduct an Email log search to trace the message route.

Answer: B,C

NEW QUESTION # 18

Your organization has a new security requirement around data exfiltration on iOS devices. You have a requirement to prevent users from copying content from a Google app (Gmail, Drive, Docs, Sheets, and Slides) in their work account to a Google app in their personal account or a third-party app. What steps should you take from the admin panel to prevent users from copying data from work to non-work apps on iOS devices?

- A. Disable "Open Docs in Unmanaged Apps" setting in Google Admin Console's Device management section.
- B. Navigate to Devices > Mobile and endpoints > Universal Settings > General and turn on Basic Mobile Management.
- C. Navigate to "Data Protection" setting in Google Admin Console's Device management section and disable the "Allow users to copy data to personal apps" checkbox.
- D. Clear the "Allow items created with managed apps to open in unmanaged apps" checkbox.

Answer: D

Explanation:
To prevent data exfiltration from Google apps on iOS devices, you need to configure the appropriate settings in the Google Admin console.
* Navigate to Device Management:
* In the Google Admin console, go to Devices > Mobile and endpoints > Universal Settings > iOS settings.
* Configure Data Protection Settings:
* Find the setting for "Allow items created with managed apps to open in unmanaged apps".
* Clear this checkbox to prevent users from copying data from managed (work) apps to unmanaged (personal) apps.
* Save Changes:
* Save the changes to ensure that the policy is enforced.
* Verification:
* Verify that the policy is applied by checking the behavior on an iOS device to ensure that data cannot be copied from managed apps to unmanaged apps or third-party applications.
By clearing this checkbox, you enforce a policy that restricts the movement of data from managed apps to unmanaged environments, thereby preventing data exfiltration.

NEW QUESTION # 19
You are the Workspace administrator for an international organization with Enterprise Plus Workspace licensing. A third of your employees are located in the United States, another third in Europe, and the other third geographically dispersed around the world. European employees are required to have their data stored in Europe. The current OU structure for your organization is organized by business unit, with no attention to user location. How do you configure Workspace for the fastest end user experience while also ensuring that European user data is contained in Europe?

- A. Configure three configuration groups within your domain. Assign the appropriate data regions to each corresponding group, but assign no preference to the users outside of the United States and Europe.
- B. Add three additional OU structures to designate location within the current OU structure. Assign the corresponding data region to each.
- C. Configure a data region at the top level OU of your organization, and set the value to "Europe".
- D. Configure a configuration group for European users, and set the data region to "Europe".

Answer: B

Explanation:
Assess Current OU Structure: Begin by evaluating the current organizational unit (OU) structure, which is organized by business unit.
Create Location-Based OUs: Add three additional OUs under the existing structure to categorize users based on their geographical location: United States, Europe, and Other Regions.
Assign Users to New OUs: Move users into the newly created location-based OUs according to their physical location.
Set Data Regions: Assign the appropriate data region for each new OU. For the European OU, set the data region to "Europe" to ensure compliance with data residency requirements.
Validate Configuration: Ensure that the configuration is correctly implemented and verify that European user data is being stored in Europe.
Monitor Performance: Regularly monitor and optimize the system to ensure the fastest end-user experience globally.
