So rest assured that with the Google-Workspace-Administrator exam dumps you will get everything that you need to prepare and pass the Google Cloud Certified - Professional Google Workspace Administrator certification exam with good scores.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q44-Q49):

NEW QUESTION # 44

An end user informs you that they are having issues receiving mail from a specific sender that is external to your organization. You believe the issue may be caused by the external entity's SPF record being incorrectly configured. Which troubleshooting step allows you to examine the full message headers for the offending message to determine why the messages are not being delivered?

- A. Use the Postmaster Tools API to pull the message headers.
- B. Perform an SPF record check on the domain to determine whether their SPF record is valid.
- **C. Use the Security Investigation Tool to review the message headers.**
- D. Use the Email Log Search to directly review the message headers.

Answer: C

Explanation:

The Security investigation Tool shows the full message headers, including SPF, DKIM and DMARC. Checked on the Admin console.

NEW QUESTION # 45

You have configured Secure Transport (TLS) Compliance for all messages coming to and from an external domain, altostrat.com, that your end users communicate with via Gmail. What will your end users experience when messages are delivered to them from altostrat.com without TLS enabled?

- **A. The message will not be delivered to the end user in any form.**
- B. The user will receive a failure message informing them that the message could not be delivered to their inbox and that they will need to work with their Workspace administrator to resolve the issue.
- C. The message will be delivered to their spam folder.
- D. A warning banner will appear on the message informing the user that the message was not sent securely.

Answer: A

Explanation:

Incoming messages from non-TLS connections are rejected without any notification to you. The sender gets a non-delivery report. <https://support.google.com/a/answer/2520500?hl=en&zippy=%2Cunderstand-what-happens-to-messages-sent-to-or-from-servers-that-dont-use-tls>

NEW QUESTION # 46

Your employer, a media and entertainment company, wants to provision Google Workspace Enterprise accounts on your domain for several world-famous celebrities. Leadership is concerned with ensuring that these VIPs are afforded a high degree of privacy. Only a small group of senior employees must be able to look up contact information and initiate collaboration with the VIPs using Google Workspace services such as Docs, Chat, and Calendar.

You are responsible for configuring to meet these requirements. What should you do?

- A. In Directory Settings, disable Contact Sharing.
- B. In the Users list, find the VIPs and turn off the User setting "Directory Sharing."
- C. Create a Group for the VIPs and their handlers, and set the Group Access Level to Restricted.
- **D. Create separate Custom Directories for the VIPs and regular employees.**

Answer: D

Explanation:

- * Access Admin Console:
- * Sign in to the Google Admin console.
- * Set Up Custom Directories:
- * Navigate to "Directory" > "Directory settings."
- * Click on "Custom directories."
- * Create Custom Directory for VIPs:
- * Create a new directory specifically for the VIPs.
- * Add the VIPs to this directory.
- * Set Up Access Controls:
- * Configure who can view and access the VIP directory.
- * Only allow senior employees or specific groups access to this directory.
- * Configure Directory Visibility:
- * Ensure that the VIPs' contact information is not visible in the main directory.
- * Adjust settings to restrict visibility and access appropriately.
- * Test Configuration:

* Verify the setup by checking directory visibility from both regular employees' and senior employees' accounts.

References:

- * Manage Directory Visibility
- * Set Up and Manage Custom Directories

NEW QUESTION # 47

External Company is reporting that they are not receiving messages from your users. Your users are reporting that everything is sending fine and they are not receiving bounceback messages or any notifications. You need to determine what could be causing the non-delivery and why they aren't receiving the notifications. What should you do?

- A. Ask other customers on Cloud Connect Community if they are experiencing outages.
- **B. Review the affected sent messages in the email audit log.**
- C. Connect to the user's mailbox and review the headers using the Google Workspace Toolbox.
- D. Using MX Toolbox, ensure that your SPF, DKIM, and DMARC records are up to date.

Answer: B

Explanation:

A is not correct because mail routing is normally a localized issue and typically only large-scale outages are reported via this community.

B is not correct because DNS record accuracy will not tell you why a foreign server cannot receive messages from you and cannot tell you why your setup might refuse to send.

C is correct because the mail logs can see all the SMTP transactions until a message leaves G Suite.

D is not correct because there is no built-in administrative control to connect to a user's mailbox.

NEW QUESTION # 48

When reloading Gmail in Chrome, the web browser returns a 500 Error. As part of the troubleshooting process, Google support asks you to gather logs. How can this be accomplished?

- A. Admin.google.com > Reporting > Reports > Apps Reports > Gmail
- B. chrome://net-export > Start Logging to Disk > Confirm validity with <https://netlog-viewer.appspot.com>
- **C. Chrome > Window Context Menu > More Tools > Developer Tools > Network Tab > Reload the page to replicate the error > "Export HAR"**
- D. Chrome > Window Context Menu > More Tools > Task Manager > Screen Capture List of Running Processes

Answer: C

NEW QUESTION # 49
