A: A cache item might be out of date.

B: Cache reduces traffic to the back end database. At worst it does not change the amount traffic.

D: The cache disk should be at faster than the disk of the database.

E: OBIEE Caching and Cache Seeding

Cache is a component that improves performance by transparently storing data such that future requests for the same criteria can be served much faster. Like other application cache is not virtual memory in OBIEE. In OBIEE cache will be stored as files on the Hard Disk of the OBIEE Server in the form of files. By Default caching is enabled in the OBIEE server configuration.

For time-consuming Dashboard Pages, we can use the concept of cache seeding in OBIEE, this can be configured as a scheduled job that will ensure that the data is cached and readily available as and when the user runs the dashboard.

- B. Database Authentication
- C. Single Sign-On (SSO)
- D. Business Logic Object Security
- E. LDAP Authentication

**Answer: D**

Object-level security controls the visibility to business logical objects based on a user's role. You can set up object-level security for metadata repository objects, such as subject areas and presentation folders, and for Web objects, such as dashboards and dashboard pages, which are defined in the Presentation Catalog.

1) Business logic object

This controls access to objects, such as:

\*subject areas

\*presentation tables

\*presentation columns

For example, users in a particular department can view only the subject areas that belong to their department.

2) Web object security

This provides security for objects stored in the Web Catalog, such as dashboards, dashboard pages, folders, and reports. You can view only the objects for which you are authorized. For example, a mid-level manager may not be granted access to a dashboard

containing summary information for an entire department.
