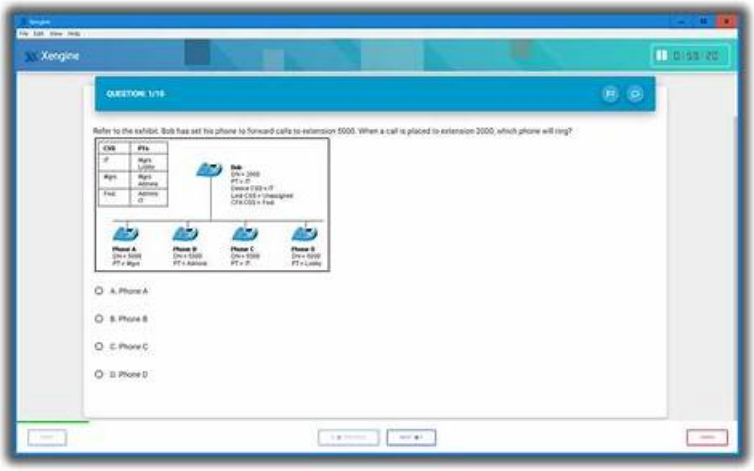
Guaranteed AD0-E902 Questions Answers, Latest AD0-E902 Test Dumps



P.S. Free & New AD0-E902 dumps are available on Google Drive shared by Itexamguide: https://drive.google.com/open?id=1gsQGIZaJBrqGSrl7CwLHqJMd-htOMyFF

Knowledge of the AD0-E902 real study guide contains are very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the AD0-E902 question guide. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite AD0-E902 Exam Questions download. Users can not only learn new knowledge, can also apply theory into the AD0-E902 actual problem, so to grasp the opportunity!

Adobe AD0-E902 Exam Syllabus Topics:

Topic	Details
Topic 1	• Scenario Design and Architecture: This section of the exam measures the skills of Solution Architects and focuses on designing and structuring Fusion scenarios efficiently. Candidates must determine the correct steps to parse JSON, perform data lookups, and distinguish between different triggers. Understanding system limitations, module selection, and timezone handling is also essential. One key skill assessed is identifying the appropriate method for uploading documents while managing access controls.
Topic 2	• Foundational Technical Concepts: This section of the exam measures the skills of Fusion Developers and covers core technical concepts related to data transformation, function nesting, and expression formation in Fusion. Candidates must understand how to modify field formats, use appropriate functions, and work with data manipulation techniques. One key skill evaluated is selecting the correct function to transform data between different formats.
Topic 3	• Working with APIs: This section of the exam measures the skills of Integration Specialists and assesses knowledge of API interactions within Fusion. Candidates must handle rate-limiting errors, identify ways to integrate third-party APIs and determine the correct module types when built-in functionalities are unavailable. One critical skill evaluated is implementing a solution for API rate limits to ensure seamless integration.
Topic 4	• Testing and Error Handling: This section of the exam measures the skills of Quality Assurance Engineers and evaluates the principles of testing and error handling in Fusion. Candidates must define test plans and test cases, identify directives for handling unreliable services, and configure custom error handling mechanisms. One specific skill tested is applying the correct error-handling directive to manage service disruptions.

Latest Adobe AD0-E902 Test Dumps & AD0-E902 Dump Check

As long as you are determined to change your current condition, nothing can stop you. Once you get the AD0-E902 certificate, all things around you will turn positive changes. Never give up yourself. You have the right to own a bright future. And our AD0-E902 exam materials are the right way to help you get what you want with ease. As the most popular study questions in the market, our AD0-E902 Practice Guide wins a good reputation for the high pass rate as 98% to 100%. Once you it, you will pass for sure.

Adobe Workfront Fusion Professional Sample Questions (Q29-Q34):

NEW QUESTION # 29
A Fusion scenario is triggered by a project status update. The scenario then updates the status, causing repeated execution of the scenario.
Which action should a user take to keep this from happening?

- A. When using instant triggers, finish the scenario with the Break directive to prevent the record from being updated again
- B. Schedule the instant trigger to only run at intervals to prevent Fusion from thinking the record has been updated after each run
- C. Create a filter after the instant trigger that only passes records that have not been updated by Fusion

Answer: C

NEW QUESTION # 30
Data coming from a third-party system contains a field that needs to be transformed into one of three possible choices.
Which function supports this transformation?

- A. Split
- B. Switch
- C. Slice

Answer: B

Explanation:
* Understanding the Requirement:
* The field data from a third-party system needs to be transformed into one of three possible choices.
* This transformation implies conditional logic, where the output depends on the value of the input field.
* Why Option A ("Switch") is Correct:
* TheSwitchfunction evaluates a given input against multiple cases and outputs a corresponding value based on the matched condition.
* For example:
switch(field, "value1", "choice1", "value2", "choice2", "defaultChoice")
* If field equals "value1", the output is "choice1".
* If field equals "value2", the output is "choice2".
* If no conditions match, the output is "defaultChoice".
* This functionality perfectly fits the requirement to transform the input into one of three possible choices.
* Why the Other Options are Incorrect:
* Option B ("Slice"):
* The slice function is used for extracting a portion of a string or array but does not support conditional transformations.
* Option C ("Split"):
* The split function divides a string into an array based on a specified delimiter. It is not designed for conditional logic or value mapping.
* How This Solves the Problem:
* The Switch function allows flexible and dynamic transformations, ensuring the field data is mapped to the correct choice based on its value.
References and Supporting Documentation:
* Adobe Workfront Fusion Functions Documentation
* Workfront Community: Using the Switch Function for Conditional Logic

NEW QUESTION # 31
In a Fusion scenario, a new project in Workfront will trigger the creation of a new project in ServiceNow. The name of the project in ServiceNow will be constructed in the following format:
Two Digit Year - Reference Number - Project Name
Which expression will generate the correct string?

- A. concat(formatDate(now;YY) - referenceNumber - name)
- B. formatDate(now;YY) - referenceNumber - name
- C. join(formatDate(now;YY) - referenceNumber - name)

Answer: A

Explanation:
* Understanding the Requirement:
* The desired output format for the project name in ServiceNow is:Two-Digit Year - Reference Number - Project Name
* This requires dynamically constructing a string by combining:
* The current year in a two-digit format.
* ThereferenceNumber(a variable or input).
* Thename(a variable or input, likely the project name).
* Why Option C is Correct:
* The concat function combines multiple strings into a single string.
* Expression:
concat(formatDate(now;YY), " - ", referenceNumber, " - ", name)
* This ensures proper formatting with hyphens and spaces between the elements.
* Breaking Down the Components:
* formatDate(now;YY): Retrieves the current year in a two-digit format (e.g., "23" for 2023).
* " - ": Adds the required separator.
* referenceNumber: Dynamically adds the reference number.
* name: Dynamically adds the project name.
* Why the Other Options are Incorrect:
* Option A ("formatDate(now;YY) - referenceNumber - name"):
* This is not valid because it does not explicitly use a string concatenation function.
* Option B ("join(formatDate(now;YY) - referenceNumber - name"):
* The join function is used for concatenating elements of an array, not individual strings.
Since the inputs are not in an array, this function will not work.
* How This Solves the Problem:
* The concat function correctly constructs the string with the desired format, dynamically generating the project name for ServiceNow based on the given inputs.
References and Supporting Documentation:
* Adobe Workfront Fusion Functions Documentation
* Workfront Community: Using the concat Function

NEW QUESTION # 32
Which two statements about working with incomplete executions are true? (Choose two.)

- A. When resolving an incomplete execution, the scenario will process the bundle of data through the remainder of the scenario not yet executed
- B. Incomplete executions should be avoided because they only give visibility into better scenario design
- C. Incomplete executions are not stored by default. This option must be enabled in the scenario settings in each scenario
- D. When incomplete executions are togged, a user must review the History tab to understand the error and then manually run the entire scenario to resolve

Answer: A,C

Explanation:
* B. Incomplete Executions Are Not Stored by Default:
* By default, Workfront Fusion does not store incomplete executions unless this setting is explicitly enabled in the scenario's settings.
* This feature needs to be activated for troubleshooting and manually resolving incomplete executions later.
* D. Resolving Incomplete Executions:

* When an incomplete execution is resumed, the scenario picks up from the point of failure and processes the remaining steps with the data bundle that caused the error.
* This ensures that the scenario completes its intended process without restarting entirely.
* Why Not Other Options?
* A. When incomplete executions are togged, a user must review the History tab to understand the error and then manually run the entire scenario to resolve: This is incorrect because incomplete executions do not require restarting the entire scenario; they continue from the point of failure.
* C. Incomplete executions should be avoided because they only give visibility into better scenario design: This statement is misleading. Incomplete executions are often inevitable and provide critical insights into handling errors and improving scenarios.

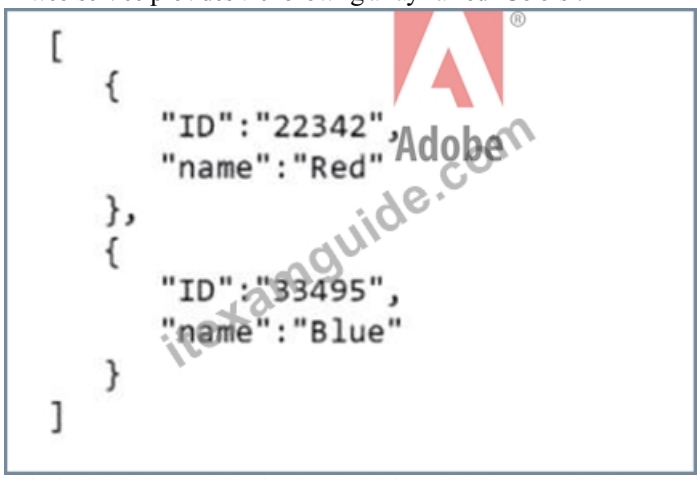
NEW QUESTION # 33
A web service provides the following array named "Colors":



Which expression returns the first ID in the array?

- A.
- B.

- C.

Answer: C

Explanation:
* Understanding the Array and the Task:
* Input Array (Colors):
[
{ "ID": "22342", "name": "Red" },
{ "ID": "33495", "name": "Blue" }
]
* Goal: Extract the first ID from the array, which is "22342".
* Why Option B is Correct:
* The expressionget(map(2.Colors; ID); 1):
* map(2.Colors; ID): Iterates over the array 2.Colors and extracts the ID field from each object. This creates a new array containing just the IDs:["22342", "33495"].
* get(...; 1): Retrieves the first element of the newly created array, which is "22342".
* Why the Other Options are Incorrect:
* Option A (map(2.Colors; ID; ID; 1)):
* This syntax is invalid because the additional ID and 1 parameters are misplaced. The map function requires only two arguments: the array and the field to map.

* Option C (map(get(2.Colors; ID); 1)):
* This incorrectly attempts to use get inside map. The get function does not return a field for mapping, so the syntax is invalid.
* How the Expression Works:
* Step 1: map(2.Colors; ID)
* Extracts the ID field from each object in the Colors array.
* Output: ["22342", "33495"].
* Step 2: get(...; 1)
* Retrieves the first element of the mapped array.
* Output: "22342".
* Use Case in Workfront Fusion:
* This approach is commonly used when processing arrays in Fusion scenarios, ensuring specific elements are accessed without additional looping or complex logic.
References and Supporting Documentation:
* Adobe Workfront Fusion Functions Documentation
* Workfront Community: Using Map and Get Functions
By combining map and get, this expression efficiently extracts the first ID from the array, ensuring correct and reliable results.

NEW QUESTION # 34
.....

AD0-E902 test questions have so many advantages that basically meet all the requirements of the user. If you have good comments or suggestions during the trial period, you can also give us feedback in a timely manner. Our study materials will give you a benefit as Thanks, we do it all for the benefits of the user. AD0-E902 Study Materials look forward to your joining in.
