

Guaranteed CDCP Success & Updated CDCP Testkings

P.S. Free 2025 EXIN CDCP dumps are available on Google Drive shared by TestValid: <https://drive.google.com/open?id=1uUGYYXq7zvwm0PbXj7611q4fa5n7D7R>

As the actual Certified Data Centre Professional (CDCP) (CDCP) certification exam costs a high penny, TestValid provides a free demo before your purchase so you can be well aware of the EXIN CDCP exam questions. The Certified Data Centre Professional (CDCP) (CDCP) exam dumps are instantly downloadable right after your purchase. In the same way, TestValid provides a money-back guarantee if in any case, you are unable to pass the EXIN CDCP Certification but the terms and conditions are mentioned on the guarantee page.

When you are struggling with those troublesome reference books; when you feel helpless to be productive during the process of preparing CDCP exams; when you have difficulty in making full use of your sporadic time and avoiding procrastination. It is time for you to realize the importance of our CDCP Test Prep, which can help you solve these annoyance and obtain a CDCP certificate in a more efficient and productive way. Not only will you be able to pass any CDCP test, but will gets higher score, if you choose our CDCP study materials.

>> **Guaranteed CDCP Success** <<

Updated CDCP Testkings | CDCP Learning Engine

CDCP test questions have so many advantages that basically meet all the requirements of the user. If you have good comments or suggestions during the trial period, you can also give us feedback in a timely manner. Our study materials will give you a benefit as Thanks, we do it all for the benefits of the user. CDCP Study Materials look forward to your joining in.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	• Fire Safety • Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.
Topic 2	• Equipment Racks: It discusses power rail • strip options, security considerations, and rack standards, properties and selection criteria.
Topic 3	• Designing a Scalable Network Infrastructure: It covers ANSI • TIA-942 cabling hierarchy, network redundancy, structured Cabling System, and planning considerations.

Topic 4	• Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 5	• Raised Floor • Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 6	• Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q45-Q50):

NEW QUESTION # 45

What is the recommended level of Common Mode Noise (CMN)?

- A. > 10 Volt measured at the rack level
- B. Preferred to be < 1 Volt with a maximum of 3 Volt
- C. CMN has no effect on ICT equipment so any level is ok
- D. > 5 Volt measured at the rack level

Answer: B

Explanation:

As per Certified Data Centre Professional (CDCP) reference materials, Common Mode Noise (CMN) is a type of electrical noise that appears equally on the line and neutral wires with respect to ground, and it can negatively affect sensitive ICT equipment. Excessive CMN at the rack level can lead to data errors, communication problems, equipment malfunctions, or even hardware damage.

The CDCP training and the official exam preparation guide specify that the preferred level of Common Mode Noise at the rack should be less than 1 Volt, and under no circumstances should it exceed 3 Volts.

Keeping CMN at these levels helps ensure the stable and reliable operation of critical data center infrastructure. Higher CMN levels indicate grounding or bonding issues, or possibly interference from electrical or mechanical sources, and must be addressed promptly.

Options A and B (CMN above 5 or 10 Volts) are not acceptable and would present a serious risk to ICT equipment operation and data integrity. Option D is incorrect, as CMN absolutely does affect ICT equipment.

NEW QUESTION # 46

What is the main advantage of busbar trunking compared to stand electrical cabling?

- A. Busbar trunking allows for flexibility.
- B. Busbar trunking can be located both overhead and under the raised floor.
- C. Busbar trunking has a fixed power rating.
- D. Busbar trunking is less expensive.

Answer: A

Explanation:

Busbar trunking systems are a method of power distribution using rigid copper or aluminium conductors to distribute the power around a building. Busbar trunking systems have many advantages over cables, such as lower space requirements, higher short-circuit strength, lower fire load, and easier installation. One of the main advantages of busbar trunking is that it allows for flexibility in terms of power transmission and distribution. Busbar trunking systems can be easily relocated, modified, or expanded to accommodate changes in the building layout or load demand. Busbar trunking systems can also be fitted with various components,

such as tap-off units, elbows, tees, and end feed units, to provide power to different locations and consumers.

Busbar trunking systems can also be installed both overhead and under the raised floor, depending on the design and preference of the building.

NEW QUESTION # 47

Which type of Fire Detection Device is recommended for protecting a Data Center?

- A. Smoke detector
- B. Heat detector
- C. None of the above
- D. Flame detector

Answer: A

Explanation:

According to the CDCP Preparation Guide, smoke detectors are the most common type of fire detection devices used in data centers, as they can detect a fire in its early stages and provide early warning to the occupants and authorities. Smoke detectors can be either spot-type or air-aspirating, depending on the design and goals of the data center. Spot-type detectors are inexpensive and simple, but may cause activation delay and false alarms. Air-aspirating detectors are more sensitive and reliable, but may require more maintenance and installation costs. Both types of detectors should be installed in accordance with the relevant standards and codes, such as NFPA 72 and EN 54.

NEW QUESTION # 48

What is a requirement of an FM200 (HFC-227) installation?

- A. It is a high-pressure gas; therefore nozzles must be mounted with two brackets.
- B. Drainage system under the raised floor.
- C. Install the gas containers (tanks) close to the data centre.
- D. Install pre-action sprinklers in the same room as the FM200.

Answer: A

Explanation:

FM200 (HFC-227) is a clean agent fire suppression system that uses a high-pressure gas to extinguish fires by reducing the oxygen concentration and absorbing the heat. FM200 is stored in cylinders at pressures of up to 42 bar (600 psi) and is released through nozzles into the protected area. Because of the high pressure, the nozzles must be mounted with two brackets to prevent them from moving or breaking during discharge. The brackets must be securely attached to the ceiling or wall and aligned with the nozzle outlet. The nozzle outlet must also be free of any obstructions that could affect the discharge pattern or distribution.

NEW QUESTION # 49

Cost of Downtime can be classified as.

- A. Direct and Indirect
- B. Classified and Declassified
- C. Mean and Median
- D. Up and Down

Answer: A

Explanation:

Cost of downtime is the total amount of money lost due to a data centre outage or disruption. It can be classified into two categories: direct and indirect. Direct costs are the immediate and measurable expenses incurred during or after an outage, such as lost revenue, lost productivity, recovery costs, compensation costs, penalties, etc. Indirect costs are the long-term and intangible impacts of an outage, such as reputation damage, customer dissatisfaction, loss of market share, legal liabilities, etc. Both direct and indirect costs can vary depending on the type, duration, and severity of the outage, as well as the industry, size, and location of the data centre.
