NEW QUESTION # 10

Which two features are specific to the Evergreen//Forever Program and are NOT included with Evergreen//Foundation? (Choose two.)

- A. Upgrade Always
- B. Controller Upgrades
- C. Capacity Consolidation
- D. Pro Deployment

Answer: A,B

Explanation:
The Evergreen//Forever program is Pure Storage's premium subscription offering, providing continuous upgrades and enhancements to ensure customers always have access to the latest technology. In contrast, Evergreen//Foundation is a lower-tier subscription with limited benefits. Here's an analysis of the features:
Correct Features:
A . Controller Upgrades :
Controller upgrades are a key feature of Evergreen//Forever, allowing customers to upgrade their FlashArray controllers non-disruptively to newer generations.
This feature is not included in Evergreen//Foundation.
D . Upgrade Always :
"Upgrade Always" ensures that customers can continuously upgrade their hardware and software without additional costs.
This is a hallmark of Evergreen//Forever and is not available in Evergreen//Foundation.
Incorrect Features:
B . Pro Deployment :
Pro Deployment services are available across all Evergreen tiers, including Evergreen//Foundation.
Therefore, this is not specific to Evergreen//Forever.
C . Capacity Consolidation :
Capacity consolidation is a general benefit of Pure Storage arrays and is not exclusive to Evergreen//Forever.
It is also available in Evergreen//Foundation.
Final Recommendation:
The correct answers are A. Controller Upgrades and D. Upgrade Always , as these are specific to Evergreen//Forever and not included in Evergreen//Foundation.

NEW QUESTION # 11
Which offering discounts controller upgrades with a purchase of qualifying storage capacity?

- A. Right-Size Guarantee
- B. Ever Agile
- C. Capacity Consolidation
- D. Love Your Storage

Answer: D

Explanation:
The offering that discounts controller upgrades with a purchase of qualifying storage capacity is Love Your Storage .
Why This Matters:
Love Your Storage:
This program is part of Pure Storage's Evergreen//Forever subscription model. It allows customers to upgrade their controllers at a discounted rate when they purchase additional qualifying storage capacity.
The goal is to ensure that customers can modernize their infrastructure without incurring excessive costs, aligning with Pure Storage's commitment to providing flexible and future-proof solutions.
Why Not the Other Options?
B . Right-Size Guarantee:

The Right-Size Guarantee allows customers to trade in existing shelves for higher-capacity ones while only paying for the incremental capacity increase. It does not involve discounts on controller upgrades.

C . Capacity Consolidation:

Capacity Consolidation refers to the ability to consolidate workloads onto fewer arrays or shelves but does not include discounts on controller upgrades.

D . Ever Agile:

Ever Agile is a subscription model that provides flexibility in scaling storage and compute resources but does not specifically discount controller upgrades tied to storage purchases.

Key Points:

Love Your Storage: Discounts controller upgrades when purchasing qualifying storage capacity.

Evergreen Benefits: Ensures customers can modernize their infrastructure cost-effectively.

Future-Proofing: Aligns with Pure Storage's commitment to delivering long-term value.

NEW QUESTION # 12

What metric is used to compute billing when customers leverage the Evergreen//One offering?

- A. Total capacity installed
- B. Capacity provisioned to hosts
- C. Raw capacity consumed
- D. Effective capacity consumed

Answer: D

Explanation:

When customers leverage the Evergreen//One offering , billing is based on the effective capacity consumed .

Why This Matters:

Effective Capacity Consumed:

Evergreen//One is a subscription-based model where customers pay for the logical capacity they consume after applying data reduction techniques like deduplication, compression, and pattern removal.

This ensures customers only pay for the actual usable capacity they need, aligning with Pure Storage's commitment to delivering predictable and cost-effective storage solutions.

Why Not the Other Options?

A . Total capacity installed:

Billing is not based on the total raw capacity installed in the array, as this does not reflect the actual usable capacity after data reduction.

B . Raw capacity consumed:

Raw capacity refers to the physical storage used before applying data reduction. Evergreen//One focuses on effective capacity, not raw capacity.

D . Capacity provisioned to hosts:

Provisioned capacity refers to the logical space allocated to hosts, which may include unused or overprovisioned space. Billing is based on the actual consumed capacity.

Key Points:

Effective Capacity: Reflects the logical capacity consumed after data reduction.

Subscription Model: Aligns with Evergreen//One's focus on predictable and flexible billing.

Data Reduction: Deduplication, compression, and pattern removal optimize storage efficiency, reducing costs for customers.

NEW QUESTION # 13

An admin is setting up replication and has set up a Protection Group. What are the three choices when adding Members? (Select three.)

- A. Add Hosts
- B. Add Volumes

- C. AddHBAWWN
- D. Add Snapshots
- E. Add Host Groups

Answer: B,D,E

Explanation:
When setting up replication on a Pure Storage FlashArray, an admin creates a Protection Group to define which entities will be replicated to a remote FlashArray. When adding members to a Protection Group, there are three valid choices: Volumes , Snapshots , and Host Groups . Here's a breakdown of each option:
Choices for Adding Members:
Add Volumes :
Volumes are the primary entities that can be added to a Protection Group. Replication ensures that the data within these volumes is copied to the remote FlashArray.
This is the most common use case for replication, especially for protecting critical data such as databases or virtual machine disks.
Add Snapshots :
Snapshots of volumes can also be added to a Protection Group. This allows point-in-time copies of the data to be replicated to the remote array.
Snapshots are useful for disaster recovery scenarios where you need to restore data to a specific point in time.
Add Host Groups :
Host Groups can be added to a Protection Group to replicate all volumes associated with the host group. This simplifies management when multiple volumes are tied to a single application or server.
Replicating Host Groups ensures that all related volumes are protected together, maintaining consistency across the workload.
Incorrect Options:
A . Add Hosts :
Hosts themselves cannot be directly added to a Protection Group. Instead, replication focuses on the data (volumes) or logical groupings (host groups) associated with the hosts.
E . Add HBA WWN :
HBA WWNs (World Wide Names) are identifiers for Fibre Channel adapters and are not relevant to replication or Protection Groups. They are used for zoning and connectivity but do not play a role in defining replication members.
Final Recommendation:
The correct options are B. Add Volumes , C. Add Snapshots , and D. Add Host Groups , as these are the valid entities that can be added to a Protection Group for replication.

NEW QUESTION # 14
A customer wants to have more insight into and control of their Pure Storage FlashArray and VMware environment from a single user interface. What does the customer need to do to enable this capability in their environment?

- A. Install Pure Storage SRA for VMware Site Recovery Manager (SRM)
- B. Ensure all VMware API for Array Integration (VAAI) primitives are enabled
- C. Log in to the FlashArray GUI and install the plugin for vSphere Client
- D. Configure FlashArray Management Pack for vRealize Operations Manager

Answer: D

Explanation:
To gain more insight and control over their Pure Storage FlashArray and VMware environment from a single user interface, the customer should configure the FlashArray Management Pack for vRealize Operations Manager (vROps) . Here's why:
Analysis of Options:
A . Ensure all VMware API for Array Integration (VAAI) primitives are enabled :

VAAI is a set of APIs that offloads storage tasks from the ESXi host to the storage array, improving performance and efficiency. However, it does not provide a unified interface for managing both FlashArray and VMware environments.

B . Log in to the FlashArray GUI and install the plugin for vSphere Client :

While the FlashArray plugin for vSphere Client provides some integration, such as provisioning and monitoring FlashArray volumes directly from the vSphere Client, it does not offer comprehensive visibility and control over both environments from a single interface.

C . Configure FlashArray Management Pack for vRealize Operations Manager :

The FlashArray Management Pack for vROps integrates Pure Storage FlashArray with VMware vRealize Operations Manager, enabling centralized monitoring, analytics, and management of both environments from a single pane of glass.

This solution provides deep insights into storage performance, capacity utilization, and health metrics, making it the ideal choice for the customer's requirement.

D . Install Pure Storage SRA for VMware Site Recovery Manager (SRM) :

The Pure Storage Storage Replication Adapter (SRA) is used for disaster recovery orchestration with VMware SRM. It does not provide a unified interface for managing FlashArray and VMware environments.

Recommendation:

The correct answer is C. Configure FlashArray Management Pack for vRealize Operations Manager , as it fulfills the customer's need for a single user interface to manage both FlashArray and VMware environments.
