Exam Splunk SPLK-1002 Sample | SPLK-1002 Pass Guarantee

It's better to hand-lit own light than look up to someone else's glory. PassLeaderVCE Splunk SPLK-1002 exam training materials will be the first step of your achievements. With it, you will be pass the Splunk SPLK-1002 Exam Certification which is considered difficult by a lot of people. With this certification, you can light up your heart light in your life. Start your new journey, and have a successful life.

Splunk Core Certified Power User Exam Sample Questions (Q291-Q296):

NEW QUESTION # 291
Which of the following statements about tags is true? (select all that apply.)

- A. Tags categorize events based on a search.
- B. Tags are designed to make data more understandable.
- C. Tags are based on field/vale pairs.
- D. Tags are case-insensitive.

Answer: B,C

Explanation:
The following statements about tags are true: tags are based on field/value pairs and tags categorize events based on a search. Tags are custom labels that can be applied to fields or field values to provide additional context or meaning for your data. Tags can be used to filter or analyze your data based on common concepts or themes. Tags can be created by using various methods, such as search commands, configuration files, user interfaces, etc. Some of the characteristics of tags are:
Tags are based on field/value pairs: This means that tags are associated with a specific field name and a specific field value. For example, you can create a tag called "alert" for the field name "status" and the field value "critical". This means that only events that have status=critical will have the "alert" tag applied to them.
Tags categorize events based on a search: This means that tags are defined by a search string that matches the events that you want to tag. For example, you can create a tag called "web" for the search string sourcetype=access_combined. This means that only events that match the search string sourcetype=access_combined will have the "web" tag applied to them.
The following statements about tags are false: tags are case-insensitive and tags are designed to make data more understandable. Tags are case-sensitive and tags are designed to make data more searchable. Tags are case-sensitive: This means that tags must match the exact case of the field name and field value that they are associated with. For example, if you create a tag called "alert" for the field name "status" and the field value "critical", it will not apply to events that have status=CRITICAL or Status=critical. Tags are designed to make data more searchable: This means that tags can help you find relevant events or patterns in your data by using common concepts or themes. For example, if you create a tag called "web" for the search string sourcetype=access_combined, you can use tag=web to find all events related to web activity.

NEW QUESTION # 292
By default, how is acceleration configured in the Splunk Common Information Model (CIM) add-on?

- A. Turned on
- B. Determined automatically based on the data source.
- C. Determined automatically based on the sourcetype.
- D. Turned off

Answer: B

NEW QUESTION # 293
Which of the following statements describes field aliases?

- A. Field alias names replace the original field name.
- B. Field aliases can be used in lookup file definitions.
- C. Field alias names are not case sensitive when used as part of a search.
- D. Field aliases only normalize data across sources and sourcetypes.

Answer: B

Explanation:
Field aliases are alternative names for fields in Splunk. Field aliases can be used to normalize data across different sources and sourcetypes that have different field names for the same concept. For example, you can create a field alias for src_ip that maps to clientip, source_address, or any other field name that represents the source IP address in different sourcetypes. Field aliases can also be used in lookup file definitions to map fields in your data to fields in the lookup file. For example, you can use a field alias for src_ip to map it to ip_address in a lookup file that contains geolocation information for IP addresses. Field alias names do not replace the original field name, but rather create a copy of the field with a different name. Field alias names

are case sensitive when used as part of a search, meaning that src_ip and SRC_IP are different fields.

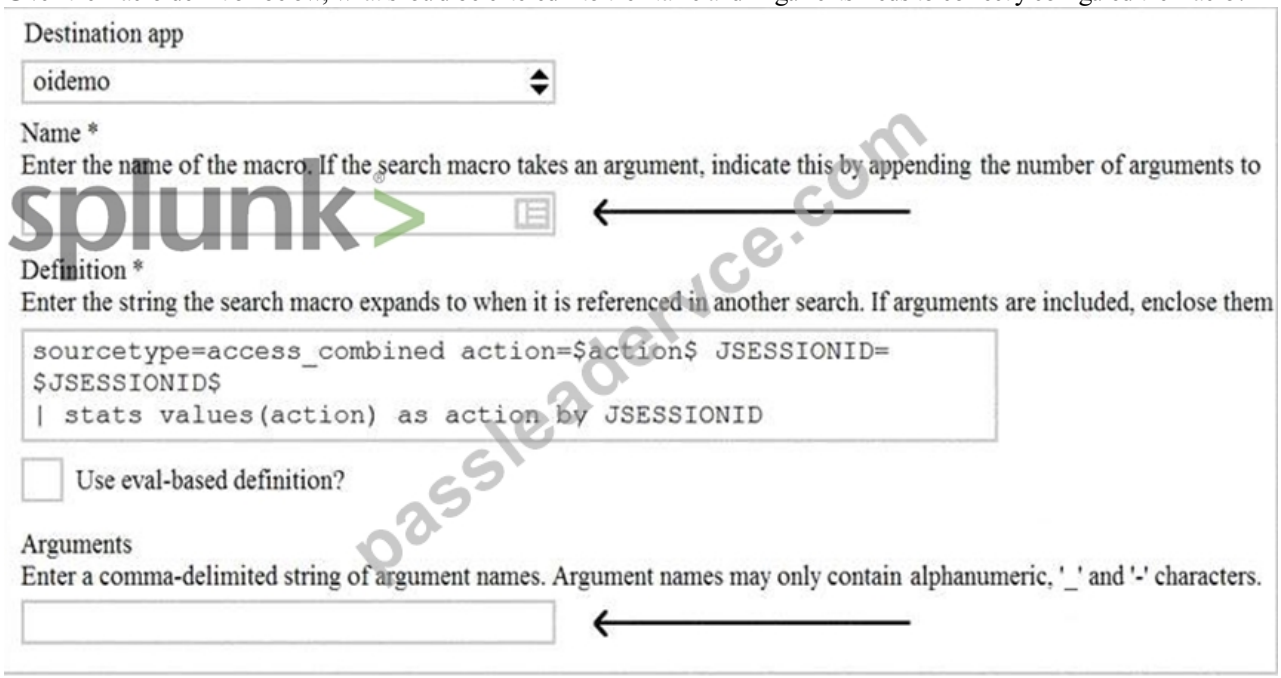
NEW QUESTION # 294
Which of the following are required to create a POST workflow action?

- A. XMI attributes, URI, name.
- B. URI, search string, time range picker.
- C. Label, URI, post arguments.
- D. Label, URI, search string.

Answer: C

Explanation:
POST workflow actions are custom actions that send a POST request to a web server when you click on a field value in your search results. POST workflow actions can be configured with various options, such as label name, base URL, URI parameters, post arguments, app context, etc. One of the options that are required to create a POST workflow action is post arguments. Post arguments are key-value pairs that are sent in the body of the POST request to provide additional information to the web server. Post arguments can include field values from your data by using dollar signs around the field names.

NEW QUESTION # 295
Given the macro definition below, what should be entered into the Name and Arguments fileds to correctly configured the macro?



- A. The macro name is sessiontracker and the arguments are $action$, $JESSIONID$.
- B. The macro name is sessiontracker(2) and the Arguments are $action$, $JESSIONID$.
- C. The macro name is sessiontracker(2) and the arguments are action, JESSIONID.
- D. The macro name is sessiontracker and the arguments are action, JESSIONID.

Answer: C

Explanation:
Reference: https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/Definesearchmacros The macro definition below shows a macro that tracks user sessions based on two arguments: action and JSESSIONID.
sessiontracker(2)
The macro definition does the following:
It specifies the name of the macro as sessiontracker. This is the name that will be used to execute the macro in a search string.
It specifies the number of arguments for the macro as 2. This indicates that the macro takes two arguments when it is executed.
It specifies the code for the macro as index=main sourcetype=access_combined_wcookie action=$action$ JSESSIONID=$JSESSIONID$ | stats count by JSESSIONID. This is the search string that will be run when the macro is

executed. The search string can contain any part of a search, such as search terms, commands, arguments, etc. The search string can also include variables for the arguments using dollar signs around them.
In this case, action and JSESSIONID are variables for the arguments that will be replaced by their values when the macro is executed.
Therefore, to correctly configure the macro, you should enter sessiontracker as the name and action, JSESSIONID as the arguments. Alternatively, you can use sessiontracker(2) as the name and leave the arguments blank.

NEW QUESTION # 296
.....

By adhering to the principle of "quality first, customer foremost", and "mutual development and benefit", our company will provide first class service for our customers. As a worldwide leader in offering the best SPLK-1002 exam guide, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service.
