2025 Updated H12-891_V1.0 – 100% Free Practice Exam Pdf | H12-891_V1.0 Latest Examprep

The HCIE-Datcom V1.0 (H12-891_V1.0) questions are in use by many customers currently, and they are preparing for their best

future daily. Even the students who used it in the past to prepare for the Huawei Certification Exam have rated our practice questions as one of the best. You will receive updates till 365 days after your purchase, and there is a 24/7 support system that assists you whenever you are stuck in any problem or issues.

Huawei HCIE-Datacom V1.0 Sample Questions (Q243-Q248):

NEW QUESTION # 243

The free mobility function is deployed on the iMaster NCE-Campus on a campus network. Which of the following information should an administrator pay attention to?

- A. Select the policy enforcement point.
- B. Deliver the inter-group policy.
- C. Define security groups.
- D. Deploy a policy control matrix.

Answer: A,B,C,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The free mobility function in iMaster NCE-Campus allows users to maintain consistent security policies regardless of their physical location within the campus network. To correctly implement this function, the administrator must:

A: Define security groups: Group users and devices based on roles or functions.

B: Deliver the inter-group policy: Apply policies that define how different security groups interact.

C: Deploy a policy control matrix: Establish a matrix that specifies the access control policies between security groups.

D: Select the policy enforcement point: Choose devices or interfaces where policies are enforced, such as switches or routers.

All four steps are crucial for achieving dynamic policy enforcement in a virtualized and mobility-oriented campus network.

NEW QUESTION # 244

Router R1 and Router R2 run BGP both routers are in the AS65234 The router R2 route is present in the BGP routing table of router R1, but not in the P of router R1 road

- A. Router R1 does not enable BGP Multi-hop D Routing is not optimal
- B. With BGP, both routers are in the AS65234 Route cry PD is done by the right big worker
- C. By the table, so what causes the problem to occur? A, synchronization is turned off
- D. The BGP neighbor relationship is Down

Answer: A

NEW QUESTION # 245

Among NETCONF operations, the <config> operation may contain an operation attribute, which is used to specify an operation type for configuration data. Which of the following operation attributes is incorrect?

- A. merge
- B. update
- C. create
- D. remove

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

In NETCONF (Network Configuration Protocol), the <config> operation can include operation attributes to specify how configuration data is handled:

merge (B): Merges the new configuration with the existing one.

replace: Replaces the existing configuration with the new one.

create (C): Creates a new configuration node, but will fail if the node already exists.

delete: Deletes an existing configuration node.

remove (A): Removes an existing node, but if the node does not exist, it will not generate an error.

The attribute "update" (D) is not a valid NETCONF operation attribute.

Dis the correct answer as it does not exist within theNETCONF operation attribute set.

NEW QUESTION # 246

What is the following description of LDP reliability?

- A. The LDP ERR can also generate an ISP for a tag map from a non-optimal next hop, and create a forwarding table entry as a backup of the primary LSP
- B. LDP and LSP linkage, the need for IGP to suppress the release of routes, to ensure that LDP and LSP paths are consistent
- C. Manually configured LDP FRR policy defaults to a 32-bit backup route that triggers LDP to establish a backup ISP
- D. LSP GR (Graceful Restart) takes advantage of the high difference between the LS forwarding plane and the control plane to realize that the device forwards without interruption when the protocol is restarted or the master-standby is reversed

Answer: C

NEW QUESTION # 247

NAFTIR policing can only be applied to the inbound direction. Its purpose is to monitor the traffic entering the device and ensure that the upstream device does not unnecessarily consume network resources.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

* NAFTIR (Network Address Flow Traffic Incoming Rate) policing is a traffic control mechanism that can only be applied to inbound traffic.

* Purpose:

* Monitors and limits the traffic entering a network device.

* Prevents upstream devices from overloading the network with excessive data.

* Key Fact: Outbound policing requires different mechanisms like QoS shaping or traffic scheduling.

NEW QUESTION # 248

.....

Icertmaster is a website that can provide all information about different IT certification exam. Icertmaster can provide you with the best and latest exam resources. To choose Icertmaster you can feel at ease to prepare your Huawei H12-891_V1.0 exam. Our training materials can guarantee you 100% to pass Huawei certification H12-891_V1.0 exam, if not, we will give you a full refund and exam practice questions and answers will be updated quickly, but this is almost impossible to happen. Icertmaster can help you pass Huawei Certification H12-891_V1.0 Exam and can also help you in the future about your work. Although there are many ways to help you achieve your purpose, selecting Icertmaster is your wisest choice. Having Icertmaster can make you spend shorter time less money and with greater confidence to pass the exam, and we also provide you with a free one-year after-sales service.
