Our to-the-point and trustworthy HCIE-Datcom V1.0 Exam Questions in three formats for the Huawei H12-891_V1.0 certification exam will surely assist you to qualify for Huawei H12-891_V1.0 Certification. Do not underestimate the value of our Huawei H12-891_V1.0 exam dumps because it is the make-or-break point of your career.

Huawei H12-891_V1.0 certification exam covers a wide range of topics, including network architecture, network protocols, network security, network management, and network optimization. H12-891_V1.0 exam is designed to evaluate the candidate's ability to design and implement data communication networks that meet the requirements of different organizations. H12-891_V1.0 exam also tests the candidate's ability to troubleshoot complex network issues and provide effective solutions.

Huawei H12-891_V1.0 (HCIE-Datcom V1.0) Exam is a certification exam that is designed to test the knowledge and skills of network engineers in the field of data communication. H12-891_V1.0 exam is offered by Huawei Technologies Co. Ltd., a multinational technology company that specializes in designing and manufacturing telecommunications equipment and consumer electronics.

H12-891_V1.0 Exam Certification Cost | Exam H12-891_V1.0 Answers

Easy4Engine is a good website for Huawei certification H12-891_V1.0 exams to provide short-term effective training. And

Easy4Engine can guarantee your Huawei certification H12-891_V1.0 exam to be qualified. If you don't pass the exam, we will take a full refund to you. Before you choose to buy the Easy4Engine products before, you can free download part of the exercises and answers about Huawei Certification H12-891_V1.0 Exam as a try, then you will be more confident to choose Easy4Engine's products to prepare your Huawei certification H12-891_V1.0 exam.

Huawei HCIE-Datacom V1.0 Sample Questions (Q63-Q68):

NEW QUESTION # 63

The command `ip as-path-fiter as-path-fiter-number (deny|permit) regular-expression` to configure as-path-filter, in this command, multiple sentences can form an as-path-filter statement, what is the relationship between so many statements?

- A. or relationships
- B. and is no longer matched downwards
- C. Routes match in order When a route matches to a clause, the relationship between
- D. Routes match in order and routes need to match all sub-directions

Answer: C

NEW QUESTION # 64

The IS-IS Level-1 neighbor relationship is not established between R3 and R4. Referring to the following information, what is the possible cause?

[R3]display isis error

Hello packet errors:

... ..

Repeated System ID : 0 Bad Circuit Type : 0
Bad TLV Length : 0 Zero HoldingTime : 0
Unusable IP Addr : 0 Repeated IPv4 Addr : 0
Mismatched Area Addr(L1): 13 Mismatched Proto : 0
SNPA Conflicted(LAN) : 0 Mismatched Level : 0
Mismatched Max Area Addr: 0 Bad Authentication : 0

- A. The IIH authentication between R3 and R1 fails.
- B. The area IDs of R3 and R4 are different.
- C. The circuit types of the interfaces connecting R3 and R4 do not match.
- D. The IS-IS levels of R3 and R4 do not match.

Answer: B

Explanation:

From the IS-IS error output, the key error is:

Mismatched Area Addr(L1): 13

This clearly indicates that the area addresses are different, which prevents the Level-1 adjacency from forming.

Why is Option D Correct?

* IS-IS Level-1 routers must have the same area ID to form an adjacency.

* Since the log shows a mismatched area address, the adjacency fails at Level-1.

* If R3 and R4 were Level-2 routers, they could form an adjacency even with different area IDs.

Why Are the Other Options Incorrect?

Option A: No authentication failure is reported. # Option B: No "Mismatched Level" errors appear, so their levels are compatible.

Option C: No "Bad Circuit Type" errors indicate mismatched circuit types.

Thus, the correct answer is D.

NEW QUESTION # 65

SSH uses asymmetric encryption algorithms AES and DES to achieve security for data transmission, and uses HMAC to ensure the complete integrity of integer data

- A. TRUE
- B. FALSE

Answer: A

NEW QUESTION # 66

The figure shows a packet that contains three label headers. Select the values (in decimal notation) of the X, Y, and Z fields, respectively.

Answer:

Explanation:

Explanation:

- * X = 0
- * Y = 0
- * Z = 1

Understanding MPLS Label Headers

What is MPLS (Multiprotocol Label Switching)?

- * MPLS is a high-performance forwarding technology that replaces IP lookups with label switching.
- * Packets are forwarded based on labels instead of destination IP addresses.
- * MPLS labels are stacked when passing through multiple hops.

MPLS Label Stack Structure Each MPLS label has four fields:

- * Label - 20-bit identifier used for forwarding.
- * EXP (Experimental Bits / Traffic Class) - 3-bit field used for QoS (Quality of Service).
- * S (Bottom of Stack) - 1-bit flag that indicates whether this is the last (bottom) label in the stack.
- * TTL (Time-To-Live) - 8-bit field to prevent loops.

Understanding the EXP Fields (X, Y, Z) in the Figure

- * The image shows a packet with three MPLS labels.
- * Each label has an EXP field (X, Y, Z) representing the QoS bits.
- * By default, MPLS EXP bits are copied from the top label to lower labels unless modified by QoS policies.
- * If no QoS policy modifies the EXP bits, they remain the default value of 0.
- * The bottom label in the stack (Label 3) often has an EXP value of 1 to indicate specific QoS policies.

Why Are the Answers X = 0, Y = 0, Z = 1?

X = 0 (Default EXP for Label 1, the top label in the stack). # Y = 0 (EXP for Label 2, unchanged from the default value). # Z = 1 (EXP for Label 3, indicating a QoS setting applied to the bottom label).

Real-World Application:

- * MPLS QoS (Quality of Service): EXP values determine packet priority in Service Provider networks.
- * Traffic Engineering (TE): MPLS labels guide packets through optimized paths, ensuring low-latency services.
- * Enterprise WAN Optimization: MPLS traffic is prioritized for critical applications like VoIP, Video Conferencing, and Cloud Services.

NEW QUESTION # 67

Regarding the difference between NSR and NSF, the correct one is?

- A. NSF must rely on neighbor routers to complete
- B. The NSR must rely on a neighbor router to complete
- C. NSF does not require a neighbor router to complete

- D. Both NSR and NSF require a neighbor router to complete

Answer: A

NEW QUESTION # 68

.....

However, when asked whether the H12-891_V1.0 latest dumps are reliable, costumers may be confused. For us, we strongly recommend the H12-891_V1.0 exam questions compiled by our company, here goes the reason. On one hand, our H12-891_V1.0 test material owns the best quality. When it comes to the study materials selling in the market, qualities are patchy. But our Huawei test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our H12-891_V1.0 Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.
