- A. TRUE
- B. FALSE

Answer: A

### NEW QUESTION # 119

The RR (Route Reflector) is critical to the Huawei SD-WAN Solution, and its deployment mode varies based on the scenario. In which of the following modes can an RR be deployed?

- A. Co-deployment of the RR and hub site
- B. Multi-area deployment of the RR
- C. Partially independent deployment of the RR
- D. Independent deployment of the RR

**Answer: A,C,D**

Explanation:

Understanding Route Reflectors (RRs) in Huawei SD-WAN

In Huawei's SD-WAN Solution, BGP Route Reflectors (RRs) are used to reduce the number of BGP peer relationships and optimize routing scalability.

# Key Functions of an RR in SD-WAN:

- \* Centralizes BGP route distribution in large-scale SD-WAN networks.
- \* Reduces full-mesh BGP peering complexity.
- \* Improves network scalability and convergence time.

Analysis of Each Deployment Mode:

# B. Independent deployment of the RR

- \* Correct: The RR is deployed as a standalone device, independent of the SD-WAN hub site.
- \* Best for large-scale SD-WAN deployments requiring dedicated route control.

# C. Co-deployment of the RR and hub site

- \* Correct: The RR is co-located with the SD-WAN hub site, reducing infrastructure overhead.
- \* Best for mid-sized SD-WAN deployments where the hub and RR functions can be combined.

# D. Partially independent deployment of the RR

- \* Correct: The RR is partially separated from the hub but still shares some resources.
- \* Provides a balance between full independence and co-location.

# A. Multi-area deployment of the RR (Incorrect Choice)

- \* Multi-area RR deployment is not a common Huawei SD-WAN practice.
- \* Huawei does not require separate RRs per area, as SD-WAN is based on centralized policy-based routing.

Real-World Application:

- \* Large Enterprise SD-WAN: Uses independent RRs to optimize global network routing.
- \* Service Provider SD-WAN: Uses co-deployed RRs to reduce infrastructure costs while maintaining route scalability.

#### NEW QUESTION # 120

If we have a VPN instance configured on a router, if we need to view the VPN route on a Huawei router, which of the following commands should we use?

- A. display ip routing-table
- B. display ip vpn-instance
- C. display ip routing-table vpn-instance vpn-instance-name
- D. display vpn routing-table

**Answer: C**

#### NEW QUESTION # 121

The on-premise mode is recommended for controller deployment on small and midsize campus networks.

- A. TRUE
- B. FALSE

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation:

On-premise mode refers to deploying the Huawei iMaster NCE-Campus controller within the enterprise network instead of using a cloud-based solution.

# Best suited for small and midsize campus networks that require:

- \* Greater control over data security
- \* Local network automation
- \* No reliance on cloud connectivity

Since on-premise mode is recommended for small and midsize campus networks, the statement is TRUE.
