HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q228-Q233):

NEW QUESTION # 228

What is the provider for the resource shown in the Exhibit?

```
resource "aws_vpc" "main" {  
  name = "test"  
}
```

- A. VPC
- B. test
- C. main
- D. aws

Answer: D

Explanation:

The provider for the aws_vpc resource is aws, as the resource type begins with aws_, which denotes that it is managed by the AWS provider.

References:

Terraform Providers

NEW QUESTION # 229

A resource block is shown in the Exhibit section of this page. How would you reference the attribute name of this resource in HCL?

- A. kubernetes_namespace.test.name
- B. resource.kubernetes_namespace.example.name
- C. data.kubernetes_namespace.name
- D. kubernetes_namespace.example.name

Answer: D

Explanation:

In Terraform, the correct way to reference a resource attribute is:

pgsql

CopyEdit

resource_type.resource_name.attribute

For example, if the resource block is:

hcl

CopyEdit

```
resource "kubernetes_namespace" "example" {  
  metadata {  
    name = "my-namespace"  
  }  
}
```

To reference the name attribute, use:

pgsql

CopyEdit

kubernetes_namespace.example.name

Explanation of incorrect answers:

* A (resource.kubernetes_namespace.test.name)- Incorrect. Terraform does not use the resource prefix when referencing resources.

* C (data.kubernetes_namespace.name)- Incorrect. This syntax is used for data sources, not resources.

* D (kubernetes_namespace.test.name)- Incorrect. The resource name is "example", not "test".

Terraform Resource References

NEW QUESTION # 230

Which of the following is not a valid Terraform collection type?

- A. Map
- **B. Tree**
- C. set
- D. List

Answer: B

Explanation:

Explanation

This is not a valid Terraform collection type, as Terraform only supports three collection types: list, map, and set. A tree is a data structure that consists of nodes with parent-child relationships, which is not supported by Terraform.

NEW QUESTION # 231

Which Terraform command checks that your configuration syntax is correct?

- A. terraform show
- B. terraform init
- C. terraform fmt
- **D. terraform validate**

Answer: D

NEW QUESTION # 232

When you include a module block in your configuration that references a module from the Terraform Registry, the "version" attribute is required.

- **A. False**
- B. True

Answer: A

Explanation:

The "version" attribute is optional when referencing a module from the Terraform Registry. If not specified, the latest version will be used, but it is often recommended to specify a version to ensure consistency across environments.
