Itcertkr의 Salesforce Health-Cloud-Accredited-Professional 덤프를 공부하면 100% Salesforce Health-Cloud-Accredited-Professional 시험패스를 보장해드립니다. 만약 Salesforce Health-Cloud-Accredited-Professional 덤프자료를 구매하여 공부한 후 시험에 탈락할 시 불합격성적표와 주문번호를 메일로 보내오시면 덤프비용을 바로 환불해드립니다. 저희 Itcertkr Salesforce Health-Cloud-Accredited-Professional 덤프로 자격증부자되세요.

최신 Salesforce Health Cloud Health-Cloud-Accredited-Professional 무료 샘플 문제 (Q16-Q21):

질문 # 16

Which two steps can an administrator take to configure the Care Program enrollment flow? (Choose two.)

- A. Customize the care coordinator flow for patient
- B. Use the provided enrollment flow out of the box.
- C. Customize the out of the box enrollment flow template to match requirements.
- D. Customize the provider site flow.
- E. Use the patient approval flow

정답: C,E

질문 # 17

A provider has moved an existing office to a new location and wants to ensure that whenever a patient books an appointment on the existing portal, the patient receives an email with the new address.

How should a developer modify the existing Create Appointment Integration Procedure to solve the request?

- A. Build If-Else logic.
- B. Add a Conditional Block.
- C. Remove the Try-Catch.
- D. Update the Test Condition.

정답: B

설명:

To ensure that the new office address is sent to patients via email after booking, you need logic in the Integration Procedure that checks the office location and triggers the correct email template.

* Conditional Blocks in Integration Procedures allow developers to execute actions (like sending a specific email) only when certain conditions are met—such as the new office location.

* Extract:

"Use a Conditional Block in an Integration Procedure to execute logic based on data values or conditions. For example, send a specific notification when a record matches certain criteria." (Source: Omnistudio Standard Guide - Integration Procedures)

* Why not A, B, or C?

* Removing Try-Catch, building If-Else logic, or only updating test conditions do not leverage the maintainable and declarative power of Conditional Blocks in Integration Procedures.

질문 # 18

While working with a received document using Intelligent Document Automation, which three capabilities should a consultant leverage with Health Cloud out-of-the-box?

Choose 3 answers

- A. eFax Connection
- B. Document Rotation
- C. Barcode Scanning

- D. Automated Document Checklist Item Creation
- E. Record Type Association

정답: B,D,E

설명:

Step-by-Step

Health Cloud Intelligent Document Automation (IDA) Capabilities:

IDA automates processing of incoming documents (like insurance cards or clinical records).

Out-of-the-box features allow:

Document Rotation: For correcting the orientation of scanned/received documents.

Record Type Association: For matching documents to appropriate Salesforce record types (such as associating a document with a Patient or Encounter).

Automated Document Checklist Item Creation: Automatically creating checklist items for actions (e.g., missing forms or needed verifications).

Supported and Unsupported Features:

Barcode Scanning: Not an out-of-the-box feature of Health Cloud IDA (may require third-party solutions).

eFax Connection: While Health Cloud supports document management, direct eFax integration is not out-of-the-box.

Official Document Extracts:

From Salesforce Help:

"You can rotate, associate, and automate checklist items for documents received in Health Cloud using Intelligent Document Automation."

- Administer Health Cloud - Document Automation

Reference:

Intelligent Document Automation Overview

질문 # 19

An admin wants to enable their users to leverage Provider Search, which denormalized object holds data to support this feature

- A. HealthCare Provider
- B. Care Provider Searchable field
- C. Provider Search Sync Logs
- D. HealthCare Provider Facility

정답: B

설명:

Care Provider Searchable Field is the denormalized object that holds data to support the Provider Search feature in Health Cloud.

Care Provider Searchable Field is a custom object that stores searchable fields from the Healthcare Provider and Healthcare Provider Facility objects. It allows users to search for providers based on various criteria such as name, location, specialty, and availability. Healthcare Provider Facility, Provider Search Sync Logs, and Healthcare Provider are not denormalized objects in Health Cloud.

질문 # 20

A consultant is implementing Identity Verification for their customer's customer service representatives and needs to add a new search parameter.

Which record should the consultant configure to accomplish this?

- A. Identity Verification Parameter Item
- B. Linked Identity Search Detail
- C. Verification Search Feature
- D. Identity Verification Process Detail

정답: A

설명:

D is correct because Identity Verification Parameter Item is the record that defines the search parameters for identity verification. A consultant can create and configure Identity Verification Parameter Items to add new search parameters or modify existing ones.
