As the rapid development of the world economy and intense competition in the international, the leading status of knowledge-based economy is established progressively. A lot of people are in pursuit of a good job, a E\_S4CPE\_2405 certification, and a higher standard of life. You just need little time to download and install it after you purchase, then you just need spend about 20~30 hours to learn it. We are glad that you are going to spare your precious time to have a look to our E\_S4CPE\_2405 Exam Guide.

Our company has been putting emphasis on the development and improvement of E\_S4CPE\_2405 test prep over ten year without archaic content at all. So we are bravely breaking the stereotype of similar content materials of the exam, but add what the exam truly tests into our E\_S4CPE\_2405 Exam Guide. So we have adamant attitude to offer help rather than perfunctory attitude. We esteem your variant choices so all these versions of E\_S4CPE\_2405 study materials are made for your individual preference and inclination.

## SAP E\_S4CPE\_2405 Reliable Mock Test | E\_S4CPE\_2405 Exam Book

After you pay for our E\_S4CPE\_2405 exam material online, you will get the link to download it in only 5 to 10 minutes. You don't have to wait a long time to start your preparation for the E\_S4CPE\_2405 exam. The only thing you must make sure is that you have left your right E-mail address when you purchase our E\_S4CPE\_2405 Study Guide. Moreover, you don't need to worry about safety in buying our E\_S4CPE\_2405 exam materials. We have considered all the details for you. You can just buy and download right now!

## SAP E\_S4CPE\_2405 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• <b>System Landscapes and Identity Access Management:</b> This section of the exam measures skills of system administrators and focuses on designing and managing SAP system landscapes while ensuring secure and efficient identity access management. It includes concepts related to system environments, user authentication, and authorization controls.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Data Migration and Business Process Testing:</b> This section of the exam measures skills of SAP implementation consultants and covers the core principles of migrating data into SAP systems while ensuring that business processes run as intended. It involves understanding the methods for transferring data, verifying its accuracy, and executing process testing to confirm that the system meets operational requirements.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Introduction to Cloud Computing and SAP Cloud ERP Deployment Options:</b> This section of the exam measures skills of cloud solution architects and focuses on the fundamentals of cloud computing, along with the different deployment models available for SAP Cloud ERP. It addresses the benefits, challenges, and selection criteria for choosing the most suitable deployment option in alignment with business goals.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Extensibility, Integration, and Clean Core:</b> This section of the exam measures skills of integration specialists and involves understanding the principles of extending SAP functionality without compromising the clean core approach. It includes integrating SAP with other systems, maintaining system integrity, and ensuring sustainable customizations.</li> </ul>

## SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q53-Q58):

### NEW QUESTION # 53

Which tool is included in SAP Enterprise Support for all customers that enables comprehensive integration monitoring?

- A. SAP Analytics Cloud
- B. SAP Business Technology Platform
- **C. SAP Cloud ALM**
- D. SAP Signavio Process Manager

**Answer: C**

Explanation:

SAP includes SAP Cloud ALM in its Enterprise Support offerings, providing customers with comprehensive integration monitoring capabilities. SAP Cloud ALM is a cloud-based application lifecycle management tool designed to monitor and manage cloud and hybrid landscapes effectively.

Option A: SAP Analytics Cloud

This option is correct. SAP Cloud ALM offers end-to-end monitoring of integration scenarios, enabling users to oversee data flows across various systems and promptly address any issues.

Option B: SAP Signavio Process Manager

This option is incorrect. SAP Signavio Process Manager focuses on process modeling and analysis, not on integration monitoring.

Option C: SAP Analytics Cloud

This option is incorrect. SAP Analytics Cloud is a business intelligence and analytics tool, not designed for integration monitoring.

Option D: SAP Business Technology Platform

This option is incorrect. SAP Business Technology Platform serves as a foundation for various SAP services but does not specifically provide integration monitoring tools.

In summary, SAP Cloud ALM is the tool included in SAP Enterprise Support that enables comprehensive integration monitoring for customers.

SAP Enterprise Support is a standard offering for all SAP customers, providing tools and services to enhance system management, including integration monitoring. Let's evaluate:

\* A. SAP Cloud ALM: This is correct. SAP Cloud ALM (Application Lifecycle Management) is included with SAP Enterprise Support for all customers using cloud solutions like SAP S/4HANA Cloud Private Edition. It offers comprehensive integration monitoring capabilities, such as tracking integration flows, exceptions, and performance across connected systems (e.g., via the Integration Monitoring app).

\* B. SAP Signavio Process Manager: This is incorrect. SAP Signavio is a process modeling and analysis tool, not designed for integration monitoring. It focuses on business process optimization.

\* C. SAP Analytics Cloud: This is incorrect. SAP Analytics Cloud is a business intelligence and analytics tool, not an integration monitoring solution, though it can visualize data from integrations.

\* D. SAP Business Technology Platform: This is incorrect. SAP BTP is a platform for integration, extension, and analytics, but it's not a dedicated monitoring tool included universally with Enterprise Support. Tools like SAP Integration Suite within BTP offer monitoring, but they are separately licensed.

In summary, SAP Cloud ALM is the tool included in SAP Enterprise Support for comprehensive integration monitoring.

#### NEW QUESTION # 54

What must you do in SAP Cloud ALM to assign a business process test to a specific tester? Note: There are 2 correct answers to this question.

- A. Assign the test case to a test plan
- B. Assign the test plan to a test case
- C. Change the status to In Preparation
- D. Change the status to In Testing

**Answer: A,C**

Explanation:

To assign a business process test to a specific tester in SAP Cloud ALM, follow these steps:

Option A: Change the status to In Preparation

This option is correct. Setting the test case status to "In Preparation" allows for modifications, including assigning the test case to a tester.

Option B: Assign the test plan to a test case

This option is incorrect. Test plans encompass test cases; you assign test cases to test plans, not the other way around.

Option C: Assign the test case to a test plan

This option is correct. Including the test case in a test plan enables structured testing and assignment to specific testers.

Option D: Change the status to In Testing

This option is incorrect. The "In Testing" status indicates that testing is underway, and assignments should be completed beforehand.

In summary, to assign a business process test to a specific tester in SAP Cloud ALM, ensure the test case is assigned to a test plan and its status is set to "In Preparation," allowing for the necessary assignments and preparations before testing begins.

#### NEW QUESTION # 55

Which of the following are key-user in-app extensions that can be completed in SAP S/4HANA Cloud Private Edition? Note: There are 2 correct answers to this question.

- A. Create a custom application UI with UI adaptation at runtime.
- B. Define a custom table in the SAP Fiori app "Custom Business Objects."
- C. Define a core data services (CDS) view with the ABAP development tools for Eclipse.
- D. Create a custom object with the Business Object Processing Framework (BOPF).

**Answer: A,B**

#### NEW QUESTION # 56

How is data migrated directly from an SAP ERP system to SAP S/4HANA Cloud Private Edition?

- A. The Software Update Manager (SUM) tool migrates the legacy database from the SAP ERP source system to SAP S/4HANA Cloud Private Edition.
- B. SAP Integration Suite connects the SAP ERP source system to the SAP S/4HANA Migration Cockpit.
- C. Extract, Transform, and Load (ETL) tools are used to migrate data from the SAP ERP source system to SAP S/4HANA Cloud Private Edition (through a separate SAP HANA staging database).
- D. A Remote Function Call (RFC) connects the SAP ERP source system to the SAP S/4HANA Migration Cockpit.

**Answer: D**

Explanation:

To migrate data directly from an SAP ERP system to SAP S/4HANA Cloud Private Edition, the SAP S/4HANA Migration Cockpit utilizes a Remote Function Call (RFC) connection. This connection facilitates the direct transfer of data between the source SAP ERP system and the target SAP S/4HANA system. The Migration Cockpit provides predefined migration objects and mapping, streamlining the data migration process without the need for extensive programming.

Option B: The Software Update Manager (SUM) tool migrates the legacy database from the SAP ERP source system to SAP S/4HANA Cloud Private Edition.

This option is incorrect. The Software Update Manager is primarily used for system upgrades and updates, not for data migration between systems.

Option C: Extract, Transform, and Load (ETL) tools are used to migrate data from the SAP ERP source system to SAP S/4HANA Cloud Private Edition (through a separate SAP HANA staging database).

This option is incorrect. While ETL tools can be used for data migration, the SAP S/4HANA Migration Cockpit with an RFC connection is the standard and recommended approach for direct data migration from SAP ERP systems.

Option D: SAP Integration Suite connects the SAP ERP source system to the SAP S/4HANA Migration Cockpit.

This option is incorrect. SAP Integration Suite is designed for integrating various applications and services but is not typically used to connect the SAP ERP source system to the Migration Cockpit for data migration purposes.

In summary, the SAP S/4HANA Migration Cockpit establishes an RFC connection to facilitate direct data migration from an SAP ERP system to SAP S/4HANA Cloud Private Edition, leveraging predefined migration content to ensure a streamlined and efficient migration process.

#### NEW QUESTION # 57

What are the most important tasks in the Fit-to-Standard analysis and design workshops for a system conversion? Note: There are 2 correct answers to this question.

- A. Capturing configuration requirements for new functionality
- B. Validating new functionality in the sandbox system
- C. Capturing configuration requirements for the predefined solution
- D. Validating the predefined solution in the sandbox system

**Answer: C,D**

Explanation:

In a system conversion to SAP S/4HANA Cloud Private Edition, Fit-to-Standard analysis and design workshops focus on aligning existing business processes with the new system capabilities. Key tasks include:

Option A: Validating new functionality in the sandbox system

This option is incorrect. The primary focus is on existing processes rather than new functionalities.

Option B: Validating the predefined solution in the sandbox system

This option is correct. Workshops involve demonstrating current business processes in the sandbox system to ensure they function as expected post-conversion.

Option C: Capturing configuration requirements for the predefined solution This option is correct. Identifying necessary configurations to align the system with existing business processes is essential during these workshops.

Option D: Capturing configuration requirements for new functionality

This option is incorrect. The focus is on existing processes, not new functionalities.

In summary, during system conversion Fit-to-Standard workshops, validating the predefined solution in the sandbox system and capturing configuration requirements for existing processes are critical tasks to ensure a smooth transition.
