

Here's the Quick Way to Crack Microsoft GH-900 Certification Exam

What's more, part of that TestValid GH-900 dumps now are free: https://drive.google.com/open?id=1zggY6JYWhGIKLyIE7zwCSFcAo_OaWfQU

What does it mean to win a competition? Users of our GH-900 actual exam can give you good answers. They have improved their strength and proved their strength. Now they have more opportunities and they have the right to choose. Of course, the effective learning methods they learned during the use of our GH-900 Preparation materials also greatly enhanced their work. All of them had praised that our GH-900 exam questions are the best choice they had made to buy. So what are you waiting for? Just rush to buy our GH-900 practice guide!

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	• Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Topic 2	• Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
Topic 3	• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.

Microsoft certification is recognized by all companies of most countries in the world. If you get this certification you have a space in IT field all over the world. If you are still headache about your GH-900, our GH-900 valid exam learning materials will be a good choice for you. TestValid releases valid exam learning materials for IT exam. Purchasing our GH-900 valid exam learning materials will make you get double results with half the work. Why not to buy?

Microsoft GitHub Foundations Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which of the following are included as pre-defined repository roles?
(Each answer presents a complete solution. Choose three.)

- **A. Maintain**
- **B. Write**
- C. View
- D. Delete
- **E. Triage**
- F. Security

Answer: A,B,E

Explanation:

GitHub provides several pre-defined repository roles that determine the level of access and permissions a user has within a repository. The roles that are included by default are:

Triage: Allows users to manage issues and pull requests without write access to the code.

Maintain: Provides more extensive access, including managing settings, but without full administrative control.

Write: Grants permission to push changes and manage issues and pull requests.

Roles like "Security" and "Delete" are not standard pre-defined roles, and "View" is generally referred to as "Read" in GitHub's permission structure.

NEW QUESTION # 23

Which of the following steps are part of the Codespaces lifecycle?
(Each answer presents a complete solution. Choose three.)

- A. Install
- B. Rollback
- **C. Delete**
- D. Clone
- **E. Rebuild**
- **F. Create**
- G. Commit

Answer: C,E,F

Explanation:

The Codespaces lifecycle on GitHub includes several key steps:

Create: This is the step where a new Codespace is initiated.

Rebuild: A Codespace can be rebuilt to ensure that the environment is up-to-date with the latest code or configurations.

Delete: Once a Codespace is no longer needed, it can be deleted to free up resources.

Committing, cloning, or installing are typical Git operations but are not considered part of the specific lifecycle steps for a GitHub Codespace.

NEW QUESTION # 24

Which of the following is an Innersource development practice?

- **A. Sharing code between teams within the organization**
- B. Removing open source code from the organization
- C. Making all repositories publicly accessible
- D. Adopting open source code into the organization

Answer: A

Explanation:

Innersource is a development practice where an organization adopts open-source development methodologies within its own internal environment. The primary goal of innersource is to break down silos and encourage collaboration across different teams within the organization.

Sharing Code Between Teams:

Option B is correct because innersource involves sharing code between teams within the organization, similar to how open-source communities share code across the public domain. This practice fosters collaboration, improves code quality, and allows for reuse of code, reducing duplication of efforts.

Incorrect Options:

Option A is incorrect because adopting open-source code into the organization is related to using open-source software, not specifically to innersource practices.

Option C is incorrect because removing open-source code from the organization is contrary to the principles of both open source and innersource.

Option D is incorrect because making all repositories publicly accessible refers to open source, not innersource. Innersource typically involves keeping code internal to the organization.

NEW QUESTION # 25

The difference between GitHub Desktop and github.com is that Desktop:

- A. Is a standalone software application.
- **B. Offers a graphical user interface.**
- C. Is a self-hosted version of GitHub.
- D. Enables integration with office suite applications.
- E. Is only available on Windows operating systems.

Answer: B

Explanation:

GitHub Desktop is a standalone application that provides a graphical user interface (GUI) for interacting with GitHub repositories, as opposed to the command-line or web-based interfaces available on github.com.

Graphical User Interface:

Option D is correct because GitHub Desktop offers a GUI, making it easier for users to manage repositories, perform commits, and handle other Git-related tasks without needing to use the command line.

Incorrect Options:

Option A is partially correct in that GitHub Desktop is a standalone application, but the key difference is the GUI.

Option B is incorrect because GitHub Desktop does not specifically enable integration with office suite applications.

Option C is incorrect because GitHub Desktop is available on both Windows and macOS.

Option E is incorrect because GitHub Desktop is not a self-hosted version of GitHub; it is a client application for accessing GitHub repositories.

NEW QUESTION # 26

What are three valid states for a file in a git repository?

(Each correct answer presents part of the solution. Choose three.)

- **A. Staged**

- B. Committed
- C. Modified
- D. Tracked
- E. Uncommitted

Answer: A,B,C

Explanation:

In a Git repository, a file can be in one of the following three valid states:

Committed: The file is saved in the local repository. It is part of the permanent history of the project.

Modified: The file has been changed but not yet staged or committed. It is in the working directory.

Staged: The file has been marked to be included in the next commit. It is in the staging area, ready to be committed.

These states represent the typical lifecycle of a file as it moves through the process of being edited, reviewed, and saved in Git.

NEW QUESTION # 27

.....

The TestValid is committed to acing the GitHub Foundations (GH-900) exam questions preparation quickly, simply, and smartly. To achieve this objective TestValid is offering valid, updated, and real GitHub Foundations (GH-900) exam dumps in three high-in-demand formats. These GitHub Foundations (GH-900) exam questions formats are PDF dumps files, desktop practice test software, and web-based practice test software. All these three GitHub Foundations (GH-900) exam dumps formats contain the real and GitHub Foundations (GH-900) certification exam trainers.
