CV0-004 Passing Score Feedback & CV0-004 Exam Reference

You will get high passing score in the CompTIA CV0-004 Real Exam with our valid test questions and answers. LatestCram can provide you with the most reliable CV0-004 exam dumps and study guide to ensure you get certification smoothly. We guarantee

the high accuracy of questions and answers to help candidates pass exam with 100% pass rate.

CompTIA Cloud+ (2024) Sample Questions (Q259-Q264):

NEW QUESTION # 259

An IT manager needs to deploy a cloud solution that meets the following requirements:

- Users must use two authentication methods to access resources.
- Each user must have 10GB of storage space by default.

Which of the following combinations should the manager use to provision these requirements?

- A. OAuth 2.0 and ephemeral storage
- **B. MFA and storage quotas**
- C. OIDC and persistent storage
- D. SSO and external storage

Answer: B

Explanation:

The combination that should be used to provision the requirements of two authentication methods and 10GB of storage space by default for each user is Multi-Factor Authentication (MFA) and storage quotas. MFA provides an additional layer of security beyond just a username and password, and storage quotas can be used to allocate a specific amount of storage space for each user.

NEW QUESTION # 260

Five thousand employees always access the company's public cloud-hosted web application on a daily basis during the same time frame. Some users have been reporting performance issues while attempting to connect to the web application. Which of the following is the best configuration approach to resolve this issue?

- A. Scale horizontally based on an event
- B. Scale vertically based on a trend.
- C. Scale vertically based on a load.
- **D. Scale horizontally based on a schedule**

Answer: D

Explanation:

For a web application accessed by a large number of employees daily during the same time frame, the best configuration approach to resolve performance issues is to scale horizontally based on a schedule. This means adding more server instances to handle the load during known peak times.

Reference: Cloud resource scaling strategies, including scheduled horizontal scaling, are discussed in the CompTIA Cloud+ curriculum under cloud management and optimization.

NEW QUESTION # 261

A company requests that its cloud administrator provision virtual desktops for every user. Given the following information:

- One hundred users are at the company.
- A maximum of 30 users work at the same time.
- Users cannot be interrupted while working on the desktop.

Which of the following strategies will reduce costs the most?

- A. Configuring a group of VMs to share with multiple users
- **B. Setting up the VMs to turn off outside of business hours at night**
- C. Using VMs that have spot availability
- D. Provisioning VMs of varying sizes to match user needs

Answer: B

Explanation:

Setting up the VMs to turn off outside of business hours at night will reduce costs the most, especially since a maximum of 30 users work at the same time and users cannot be interrupted while working. This approach ensures that resources are used only when necessary.

NEW QUESTION # 262

Which of the following application migration strategies will best suit a customer who wants to move a simple web application from an on-premises server to the cloud?

- A. Retain
- **B. Rehost**
- C. Rearchitect
- D. Refactor

Answer: B

Explanation:

Rehosting, often referred to as a "lift and shift" strategy, is the best suit for a customer who wants to move a simple web application from an on-premises server to the cloud. It involves moving the application to the cloud without making significant changes, which can be a quick and cost-effective migration approach for straightforward applications.

Reference: The various cloud migration strategies, including rehosting, are part of the knowledge base for cloud migration in the CompTIA Cloud+ certification.

NEW QUESTION # 263

Five thousand employees always access the company's public cloud-hosted web application on a daily basis during the same time frame. Some users have been reporting performance issues while attempting to connect to the web application. Which of the following is the best configuration approach to resolve this issue?

- A. Scale horizontally based on an event
- B. Scale vertically based on a trend.
- C. Scale vertically based on a load.
- **D. Scale horizontally based on a schedule**

Answer: D

Explanation:

For a web application accessed by a large number of employees daily during the same time frame, the best configuration approach to resolve performance issues is to scale horizontally based on a schedule. This means adding more server instances to handle the load during known peak times.

NEW QUESTION # 264

.....
