Cisco Implementing Cisco Service Provider Advanced Routing Solutions Sample Questions (Q228-Q233):

NEW QUESTION # 228

What is the purpose of the confederation identifier in a BGP confederation?

- A. It carries the AS number within the confederation's local autonomous system.
- B. It advertises routes outside of the confederation's autonomous system.
- C. It identifies the autonomous system that belongs to the confederation.
- D. It reflects the route reflector cluster ID within the confederation.

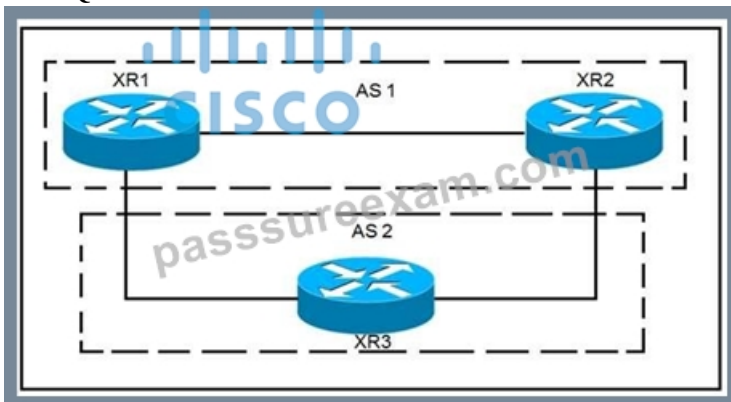

Answer: C

Explanation:

In BGP confederations, the confederation identifier represents the external AS number for the entire confederation. The BGP

confederation splits a single large autonomous system (AS) into smaller, manageable sub-ASes. These sub-ASes use private AS numbers internally but appear as a single unified AS to external BGP peers. The confederation identifier ensures that external BGP peers see the confederation as one cohesive AS rather than multiple smaller ASes.

NEW QUESTION # 229

Refer to the exhibit. XR1 and XR2 are sending the prefix 10.11.11.0/24 to XR3. A configured policy on XR1 is incorrectly prepending AS path 11 11 12 12 onto this prefix. A network operator wants to add a policy onto XR3 that will not allow the falsely prepending prefix from being installed. Which policy configuration applied to the XR3 neighbor configuration for XR1 can accomplish this requirement without impact to other or future received routes?

- ```

route-policy NO_PREPEND
 if as-path prepends
 drop
 else
 pass
endif
end-policy

```
- ```

route-policy NO_PREPEND
  if as-path passes-through '11' then
