The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36
Consider the following ADM phases objectives.

	Objective
1	Finalize the Architecture Roadmap and the supporting Implementation and Migration Plan
2	Ensure that the business value and cost of work packages and Transition Architectures is understood by key stakeholders
3	Define the overall Solution Building Blocks (SBBs) to finalize the Target Architecture based on the ABBs
4	Ensure conformance with the Target Architecture by implementation projects

Which phase does each objective match?

- A. 1F-2G-3F-4F
- B. 1G-2E-3F-4E
- C. 1E-2F-3E-4G
- D. 1F-2F-3E-4G

Answer: A

NEW QUESTION # 37

Which of the following is a benefit of Value Stream Mapping?

- A. It helps to assess an organization's effectiveness at creating, capturing, and delivering value for different stakeholders.
- B. It helps to ensure that investments and project initiatives are prioritized and funded at a level matching with their value.
- C. It highlights the value of individual work packages needed to develop the business architecture.
- D. It helps to identify value, duplication, and redundancy across the enterprise.

Answer: A

Explanation:
Value Stream Mapping (VSM) is a powerful tool used to assess an organization's effectiveness at creating, capturing, and delivering value for different stakeholders. It involves mapping out the entire process of value creation from end to end, identifying each step involved, and analyzing how value is added at each stage.
VSM helps in identifying bottlenecks, inefficiencies, and opportunities for improvement, ultimately aiming to optimize the value delivery process to better meet stakeholder needs.

NEW QUESTION # 38
Complete the sentence A business capability is_____.

- A. a description of the architectural approach to realize a particular business solution
- B. a qualitative statement of intent that should be met by the business architecture
- C. a representation of an end-to-end collection of business activities
- D. an ability that a business possesses to achieve a specific outcome

Answer: D

Explanation:
A business capability is a conceptual representation that reflects the core abilities or capacities of a business.
It is defined as an intrinsic ability that an organization possesses or can develop to consistently deliver a specific outcome or set of outcomes. Business capabilities abstract away from the organizational structure, processes, and technology to focus on the 'what' the business can do, rather than the 'how' it does it. This concept is fundamental in business architecture as it helps in aligning strategic objectives with operational efficiency.

NEW QUESTION # 39
Which of the following best describes a business capability?

- A. It is a qualitative statement of intent that should be met by the enterprise architecture capability developing the business architecture.
- B. It is an articulation of the relationships between business entities that make up the enterprise.
- C. It is a detailed description of the architectural approach to realize a particular solution.
- D. It delineates what a business does without an explanation of how, why, or where the capability is used.

Answer: D

Explanation:
In TOGAF, a business capability represents a high-level abstraction of what a business does, independent of how, why, or where the capability is used. Here's a detailed explanation:
* Definition of Business Capability:
* Business Capability: A business capability describes the capacity or ability of a business to act or achieve a specific outcome. It is an abstraction of the business functions, representing what the business does.
* Key Characteristics:
* What, Not How: A business capability focuses on what the business does, without delving into the specifics of how, why, or where it is implemented or utilized. This abstraction helps in maintaining a clear and consistent understanding across the organization.
* Independence: Business capabilities are designed to be independent of the organizational structure, processes, or systems that support them. This ensures that they remain stable even as the organization evolves.
* TOGAF References:
* Phase B: Business Architecture: In this phase, business capabilities are identified and mapped to understand the core functions of the business. This helps in aligning the architecture with business strategy and objectives.
* Capability-Based Planning: TOGAF emphasizes capability-based planning, where business capabilities are used as the foundation

for planning and decision-making.
* Importance:
* Strategic Alignment: Business capabilities provide a stable and consistent view of what the business does, which is crucial for aligning the architecture with strategic goals.
* Foundation for Analysis: By focusing on what the business does, capabilities serve as a foundation for various analyses, including gap analysis, impact analysis, and capability maturity assessments.
In summary, a business capability delineates what a business does without an explanation of how, why, or where the capability is used, providing a stable and consistent foundation for strategic planning and architecture development.

NEW QUESTION # 40
Consider the following extract of a model showing relationships between Business Architecture concepts:
What is the relationship labeled X?

- A. Consists of
- B. Enables
- C. Receives
- D. Creates

Answer: A

Explanation:
In the context of TOGAF and Business Architecture, the diagram depicts the relationship between a Value Stream, Value Stage, and Value.
* Value Stream: Represents the end-to-end set of activities that create and deliver value to a stakeholder.
* Value Stage: A distinct step or phase within the Value Stream.
* Value: The benefit delivered to the stakeholder.
The relationship "X" indicates that a Value Stream is composed of multiple Value Stages.
Think of it like a journey (Value Stream) with multiple stops along the way (Value Stages). Each stage contributes to the overall value delivered at the end of the journey.

NEW QUESTION # 41
......
