Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18

In order to remove the AOM cage, best describe the location of the 4 screws that need to be removed.

- A. 3 screws on the top, 1 screw on the side
- B. 4 screws on the top, 0 screws on the side
- **C. 2 screws on the top, 2 screws on the side**
- D. 3 screws on the side, 1 screw on the top

Answer: C

Explanation:

The AOM (Add-On Module) cage in the SYS-421GE-TNHR2-LCC is secured with 2 screws on the top and 2 on the side, a balanced approach in Supermicro's modular designs (e.g., SYS-420GP-TNAR). This ensures stability and accessibility in DLC systems. A and B skew placement, while C (all top) ignores side support. D matches Supermicro's chassis engineering, making it correct. References: Supermicro AOM cage specs, DLC system structural design.

NEW QUESTION # 19

How do you know when the DIMM has been properly inserted back into the slot?

- **A. You should hear a click after you've pressed the DIMM down into the slot**
- B. You shouldn't hear a click after you've pressed the DIMM down into the slot
- C. You should still be able to wiggle the DIMM after you've pressed the DIMM down into the slot
- D. You should see a green lit button on the DIMM

Answer: A

Explanation:

When inserting a DIMM in Supermicro systems, proper seating is confirmed by a click as the slot latches snap into place, securing the module (e.g., SYS-420GP-TNAR manuals). This audible feedback is standard in DLC systems for reliable memory installation. B (green button) isn't a feature, C contradicts correct insertion, and D (wiggling) indicates failure. Supermicro's design ensures firm DIMM placement, making A the verified sign. References: Supermicro DIMM installation guides, DLC system component reliability.

NEW QUESTION # 20

Which card would you most likely connect to the AOM module (AOM-GP401-PCIE)?

- A. Debit card
- B. Credit card
- **C. AOC NIC card**
- D. AOM card

Answer: C

NEW QUESTION # 21

How do you access the M.2 drive in the chassis?

- A. By removing the fan housing from the chassis, then removing the air shroud from the fan housing
- B. The M.2 drive is not accessible at all
- C. By removing the GPU tray from the chassis, then removing the air shroud from the GPU tray
- **D. By removing the motherboard tray from the chassis, then removing the air shroud from the motherboard tray**

Answer: D

Explanation:

In Supermicro systems like the SYS-421GE-TNHR2-LCC, M.2 drives are typically mounted on the motherboard for fast storage in high-performance computing (HPC) and AI workloads, often cooled indirectly by DLC systems. To access the M.2 drive, you must:

Remove the motherboard tray from the chassis: This exposes the motherboard where M.2 slots reside.

Remove the air shroud from the motherboard tray: The shroud covers components for airflow or hybrid cooling, and its removal provides access to the M.2 slot.

Option D aligns with Supermicro's design, as seen in manuals (e.g., SYS-420GP-TNAR), where M.2 drives are motherboard-mounted. A is incorrect since M.2 drives are serviceable; B (GPU tray) and C (fan housing) don't house M.2 drives in this context. Supermicro's DLC solutions prioritize motherboard accessibility, making D the correct procedure.

References: Supermicro motherboard tray manuals, DLC system component layouts.

NEW QUESTION # 22

Where in the chassis are the internal fans and fan housing located?

- **A. In the middle of the motherboard tray**
- B. In the back of the PCIe tray
- C. In the back of the motherboard tray
- D. In the middle of the PCIe tray

Answer: A

Explanation:

In Supermicro systems like the SYS-421GE-TNHR2-LCC, internal fans and their housing are typically located in the middle of the motherboard tray, providing airflow across CPUs and memory, even in DLC setups where liquid cooling handles primary heat removal. This placement, seen in similar systems (e.g., SYS-420GP-TNAR), balances cooling distribution. A and B (PCIe tray) focus on GPU cooling, not motherboard fans, while C (back of motherboard tray) is less common due to PSU placement. Supermicro's DLC hybrid designs integrate fans centrally on the motherboard tray, making D correct. References: Supermicro chassis layouts, DLC hybrid cooling configurations.
