## Vce CompTIA CV0-004 Test Simulator - Key CV0-004 Concepts

Different from other similar education platforms, the CV0-004 quiz guide will allocate materials for multi-plate distribution, rather than random accumulation without classification. How users improve their learning efficiency is greatly influenced by the scientific and rational design and layout of the learning platform. The CompTIA Cloud+ (2024) prepare torrent is absorbed in the advantages of the traditional learning platform and realize their shortcomings, so as to develop the CV0-004 test material more suitable for users of various cultural levels. If just only one or two plates, the user will inevitably be tired in the process of learning on the memory and visual fatigue, and the CV0-004 test material provided many study parts of the plates is good enough to arouse the enthusiasm of the user, allow the user to keep attention of highly concentrated.

## CompTIA Cloud+ (2024) Sample Questions (Q251-Q256):

### NEW QUESTION # 251

Participant attendance has been poor at the last few weekly meetings. The project manager wants to validate who the participants should be, how often the meetings should occur, and on which day and at what time the meeting should be held. Which of the following is the best place to validate this information?

- A. Project business case
- B. Project schedule
- C. Project communication plan
- D. Project management plan

**Answer: C**

**Explanation:**

The communication plan defines the meeting cadence, frequency, participants, formats, and methods of communication. If participation is low, the project manager refers to this plan for validation and adjustment.

This is part of governance and compliance to ensure the right stakeholders are engaged appropriately.

#### NEW QUESTION # 252

A cross-site request forgery vulnerability exploited a web application that was hosted in a public IaaS network. A security engineer determined that deploying a WAF in blocking mode at a CDN would prevent the application from being exploited again. However, a week after implementing the WAF, the application was exploited again. Which of the following should the security engineer do to make the WAF control effective?

- A. Configure the DDoS protection on the CDN.
- B. Deploy an IDS on the IaaS network.
- C. Add an ACL to the VM subnet.
- D. Install endpoint protection software on the VMs

**Answer: C**

Explanation:

After a WAF deployment fails to prevent an exploit, adding an Access Control List (ACL) to the Virtual Machine (VM) subnet can be an effective control. ACLs provide an additional layer of security by explicitly defining which traffic can or cannot enter a network segment. By setting granular rules based on IP addresses, protocols, and ports, ACLs help to restrict access to resources, thereby mitigating potential exploits and enhancing the security of the IaaS network.

#### NEW QUESTION # 253

A systems administrator notices a surge of network traffic is coming from the monitoring server.

The administrator discovers that large amounts of data are being downloaded to an external source. While investigating, the administrator reviews the following logs:

| Protocol | Local address    | Foreign address | State       |
|----------|------------------|-----------------|-------------|
| TCP      | 10.181.12.5:20   | 172.17.250.12   | ESTABLISHED |
| TCP      | 10.181.12.5:22   | 172.32.58.39    | ESTABLISHED |
| TCP      | 10.181.12.5:443  | 172.30.252.204  | ESTABLISHED |
| TCP      | 10.181.12.5:4443 | 10.11.15.82     | ESTABLISHED |
| TCP      | 10.181.12.5:8048 | 172.24.255.192  | TIME_WAIT   |

Which of the following ports has been compromised?

- A. Port 22
- B. Port 4443
- C. Port 443
- D. Port 20
- E. Port 8048

**Answer: E**

Explanation:

Based on the logs provided, the port that has been compromised is Port 8048. The state

"TIME\_WAIT" indicates that this port was recently used to establish a connection that has now ended. This could be indicative of the recent activity where large amounts of data were downloaded to an external source, suggesting a potential security breach.

#### NEW QUESTION # 254

An organization's internal security team mandated that public cloud resources must be accessible only by a corporate VPN and not by direct public internet access. Which of the following would achieve this objective?

- A. WAF
- B. SSH
- C. VPC

- D. ACL

**Answer: C**

Explanation:

A Virtual Private Cloud (VPC) allows users to create a secluded section of the public cloud where resources can be launched in a defined virtual network. This enables an organization to have a section of the cloud that is secured and isolated from the public internet, thus, access to public cloud resources can be restricted to only a corporate VPN. #### NEW QUESTION # 255

A systems administrator needs to configure a script that will monitor whether an application is healthy and stop the VM if an unsuccessful code is returned. Which of the following scripts should the systems administrator use to achieve this goal?

- A. `else {echo string APP_URL int RESPONSE_CODE string VMhealth_checker (APP_URL, VM) {if [ http_probe (VM) == 200 ] {stop (VM) echo RESPONSE_CODE } RESPONSE_CODE }`
- B. `else {echo string APP_URL float RESPONSE_CODE string VMhealth_checker (APP_URL, VM) {if [ http_probe (APP_URL) == 200 ] {stop (RESPONSE_CODE) echo VM } stop (VM) RESPONSE_CODE }`
- C. `else {echo string APP_URL int RESPONSE_CODE string VMhealth_checker (APP_URL, VM) {if [ http_probe (APP_URL) == 200 ] {echo RESPONSE_CODE } stop (VM) RESPONSE_CODE }`
- D. `RESPONSE_CODE } string APP_URL bool RESPONSE_CODE string VMhealth_checker (APP_URL, VM) {if [ http_probe (APP_URL) == 200 ] {echo RESPONSE_CODE } else {stop (VM) echo`

**Answer: D**

Explanation:

Script A is designed to monitor the health of an application by checking its response code. If the application returns a 200 (OK) status, it indicates that the application is healthy. Otherwise, the script will stop the VM to address the issue, which is a common approach to handle unhealthy application states in automated environments. This script effectively achieves the goal of monitoring application health and taking corrective action when an unsuccessful code is returned.
