Our Platform-App-Builder Test Prep is compiled elaborately and will help the client a lot. Our product is of high quality and the passing rate and the hit rate are both high.

Salesforce Certified Platform App Builder Sample Questions (Q85-Q90):

NEW QUESTION # 85

Universal Containers allows all employees to submit reviews for leadership using a custom object called Review. These Reviews should only be visible to the HR department and the employee who submitted the record.

Which three steps should an app builder take to properly control access to Reviews?

Choose 3 answers

- A. Remove Review Read permission from non-HR Department user Profiles.
- B. Add a Master-Detail(User; field on the Review object.
- C. Set organization-wide default to Private.
- D. Disable Grant Access Using Hierarchies.
- E. Create a criteria-based Sharing Rule for the HR Department.

Answer: C,D,E

NEW QUESTION # 86

At Universal containers, all US Sales reps should be able to view the US Team dashboard, however, only the US sales directors should be able to see the data in the component and view its source report. How can an app builder ensure the proper access is granted?

- A. Share the dashboard folder with roles and subordinates of the US Sales Director and share the report folder with the role of US Sales Director
- B. Make the dashboard dynamic and give US Sales Reps the view my teams dashboard permission
- C. Make the US Sales Director the running user and share the dashboard folder with the role US Sales Rep
- D. Share the dashboard with the public group US Sales Reps and share the dashboard source reports folder with the US Sales Director profile

Answer: A

Explanation:

Sharing the dashboard folder with roles and subordinates of the US Sales Director and sharing the report folder with the role of US Sales Director will ensure that only the US sales directors can see the data in the component and view its source report, while all US sales reps can view the US Team dashboard. Making the US Sales Director the running user will show only his or her data in the component, not the whole team's data. Making the dashboard dynamic will show different data depending on who is viewing it, not based on their role. Sharing the dashboard with the public group US Sales Reps and sharing the dashboard source reports folder with the US Sales Director profile will not prevent other profiles from accessing the reports if they have access to the report folder.

NEW QUESTION # 87

You have a team of developers who need logins to sandbox.

What's the best way to give them access?

- A. Create them as users in sandbox, then deactivate the same number of users in production.
- B. Use Developer Edition to log into sandbox.
- C. Have them login as one of the users in production.
- D. Create them as inactive users in production.

Answer: D

NEW QUESTION # 88

A new field has been added to the Applicant object that is part of an unmanaged package. A recruiter ran the Position with or without Applicants report and noticed that the new field was missing as an option to add as a column. How should an app builder troubleshoot this issue?

- A. Update the profile with the Manage Public Reports permission.
- B. Check Allow Reports for the position and applicant objects.
- **C. Add the field to the custom report type field layout.**
- D. Adjust the field level security to include in the report type.

Answer: C

Explanation:

Explanation

The app builder should add the field to the custom report type field layout to troubleshoot this issue. A custom report type is a type of report that defines which objects and fields are available for reporting. The app builder can customize which fields are included in each custom report type by editing its field layout. If a new field is added to an object that is part of an unmanaged package, it will not be automatically added to the custom report type field layout. The app builder needs to manually add it to make it available as an option to add as a column in reports based on that custom report type. Option A, B, and D are not steps that can troubleshoot this issue.

NEW QUESTION # 89

Users at Cloud Kicks provided feedback that the time card custom page layout has too many fields on it, and some fields are only needed if other fields are entered.

What should an app builder configure to help with this issue?

- A. Separate page layouts
- B. Dependent picklists
- **C. Dynamic forms**
- D. Lightning web components

Answer: C

NEW QUESTION # 90
